Remarks: (Explain alternative procedures here or in a separate report.)
The wetland is a large shallow marsh dominated by narrow-leaf cattail and sedge species. Pockets of willow shrubs are scattered throughout the wetland and the exteriors of the wetland are sedge meadows. The wetland is connected to and includes a roadside ditch south of CR-13. Standing water is present throughout the majority of the wetland. Western side of wetland is a narrow extension that includes a pond area (NWI-PUBGx) and another depression (NWI-PEMCd).
