¹Indicators of hydrophytic vegetation and wetland hydrology must be present, unless disturbed or problematic.

Restrictive Layer	Type: _____	Depth: _____	Hydric Soil Present? <u>Y</u>
-------------------	-------------	--------------	--------------------------------------

Remarks: **Soil consists of a black sandy clay loam underlain by a depleted matrix with redox concentrations. The profile meets indicator A11 - Depleted Below Dark Surface; however the area has no wetland hydrology and lacks hydrophytic vegetation. Soils are calcic and the lower clay layer holds moisture, allowing redox to form within and above it.**
