SUMMARY OF FINDINGS

Hydrophytic vegetation present?	Y	**Is the sampled area within a wetland?**	Y
Hydric soil present?	Y		
Indicators of wetland hydrology present?	Y	If yes, optional wetland site ID:	

Remarks: (Explain alternative procedures here or in a separate report.)
The wetland is a willow-dominated scrub-shrub community in a small basin which drains through a culvert under the road. A portion of the wetland was previously cleared of woody vegetation during powerline construction.

Definitions of Vegetation Strata:

Tree - Woody plants 3 in. (7.6 cm) or more in diameter at breast height (DBH), regardless of height.

Sapling/shrub - Woody plants less than 3 in. DBH and greater than 3.28 ft (1 m) tall.

Woody vines - All woody vines greater than 3.28 ft in height.

Hydrophytic vegetation present? Y

Remarks: (Include photo numbers here or on a separate sheet)

The Shrub-Carr community is dominated by willows with reed canary grass in the herbaceous layer. The woody vegetation within the powerline corridor was previously cleared.

Hydric soil present? Y

Remarks:
Soil is a very dark, clayey mucky mineral throughout the profile meeting indicator F1; the soil pit was only dug to 12" due to the proximity to an adjacent powerline corridor.
