To: File #990 Waste Management/Savage

JRM:

Subject:

Craig Johanneson (Foth Van Dyke) called to discuss site.

On a recent site visit he noted a large soil pile (~1000 yds³) at Valley Oil (Leak #2629) directly NE (downgradient) of Waste Management Facility. At same time he noticed 5' drawdown in mw-4 at north end of WM site. Valley Oil was dewatering from several wells to install new DST's, ~~drawdown~~ zone of influence extended upgradient to WM site. FVD is concerned about possible effects to their site.

I noted that I still haven't seen info requested in JRM's letter of last July - where is it? Craig said there ~~is~~ will soon be new WD data from site - he will pull all of it together (with previously requested info) and send it in, probably in early January (when available). I told him I would review after that time.

Craig noted that 3 F/UD cc's were on the last MPCA letter - not necessary. CCC: Johanneson only (at F/UD), and be sure that the original goes to Birkbeck of WM.
