Subject: RE: LEAK #17141 - South Central Grain & Energy Corrective Action Soil Disposal Proposal

Hi Terry

Thank you for the update. The MPCA is fine with the plan to landfill the petroleum contaminated soil which was excavated as a result of the surficial soil CAD at LEAK 17141.

Document soil disposal in the CAD implementation report once land filling has been performed as follows:

- documentation should be on land fill letterhead -date the soil was accepted by the landfill -volume or weight accepted by the landfill -that the soil was generated from the South Central Grain site/L# 17141.
- how the land fill disposed of the soil at the landfill (i.e. daily cover).

If there are any questions about bidding and/or reimbursement, please direct those to the Petrofund staff. Please try to perform soil disposal as soon as possible and prior to December 31, 2009.

Thank you,

Nancy

Subject: LEAK #17141 - South Central Grain & Energy Corrective Action Soil Disposal Proposal

Nancy,

Following the May 5, 2009 corrective action excavation of contaminated soils at the South Central Grain & Energy site in Hector (LEAK #17141) Glacial Lakes Environmental Consulting (GLEC) began to look for disposal options for the stockpiled soil. GLEC first looked at land farming the contaminated soil. However, after repeated attempts to contact the nearest land farmer in Cottonwood GLEC had to look at other means for the soil disposal. The next most cost effective means for disposal of the contaminated soil was the Renville County Landfill for use as daily cover. GLEC contacted the landfill and provided them with the analytical results of the soil stockpile samples. Upon review of the lab results, Renville County Engineer Marlin Larson indicated that Renville County would accept the contaminated soil for use as daily cover.

GLEC is proposing to dispose of the 110 cubic yards of petroleum-contaminated soil at the Renville County Landfill for use as daily cover. Upon approval, GLEC will begin the scheduling of the hauling to the landfill. Scale tickets will be kept for each truckload and will be provided in the corrective action report.

Call or email with any questions you may have. Upon approval we will schedule the hauling services.

Thanks,

Terry Sieck
Project Manager, GLEC
