**Re: Implementation Report Request, South Central Grain & Energy, 212
Bryant Avenue, Hector, Minnesota, MPCA LEAK#-17141**

Dear Ms. Hendry-VanPatten:

Glacial Lakes Environmental Consulting, Inc. (GLEC) has prepared the following in response to a letter dated May 20, 2010 titled "Implementation Report Request". GLEC conducted the approved voluntary response actions for the petroleum-contaminated soil at the above referenced site in June 2009. Following site excavation activities, Renville County inquired about using the excavated soil as daily cover at their sanitary landfill site. Renville County started to get the required approvals to accept the soil in the fall of 2009. Due to complications in acquiring the required approval and an unusually wet fall, the acceptance of the soil by Renville County was delayed until the spring of 2010. Renville County contacted GLEC in the spring 2010 with plans of a new pod that will be constructed in the summer of 2010. The proposed new pod would allow Renville County to accept all of the soils excavated at the site. Renville County has an expected completion date of the newly constructed pod estimated for late summer of 2010.

In an effort to reduce costs for South Central Grain & Energy, GLEC recommended in the fall of 2009 submitting the Implementation Report once all of the corrective action activities have been completed. Following the completion of the new pod at the Renville County Sanitary Landfill, GLEC will proceed with the soil disposal and complete the Implementation Report.

Sincerely,

Glacial Lakes Environmental Consulting, Inc.

Terry Sieck
Project Manager
