**Re: Responses to MPCA Comment Letter dated March 15, 2018
2017 Field Investigation and Annual Monitoring Report
MPCA Project No. SR0000027, Reviva (Former Dealers Manufacturing Company)**

Dear Ms. Sather:

On behalf of Reviva (formerly Dealer's Manufacturing Company), Carlson McCain, Inc. (Carlson McCain) is submitting responses to comments from the Minnesota Pollution Control Agency's (MPCA's) letter dated March 15, 2018 which pertained to the *2017 Field Investigation and Annual Monitoring Report* submitted by Carlson McCain. Each comment is re-stated below in italicized font, and a response is provided in bold font. Attached to this response is the *2017 Field Investigation and Annual Monitoring Report – Addendum No. 1* which provides the results of the post-mitigation confirmation vapor sampling and verification of the sub-slab depressurization system. One full, electronic copy of the *2017 Field Investigation and Annual Monitoring Report – Addendum No. 1* is being subsequently transmitted electronically.

The comments regarding vapor related matters provided by the MPCA, with Carlson McCain responses are as follows:

1. *Collect paired sub-slab and indoor air samples along with an outdoor ambient air sample in the MPCA defined heating season (Nov. 1-March 31) in accordance with the MPCA mitigation BMP.*

Response: Post-mitigation confirmation sampling was completed on March 27, 2018. Please see Section 3.0 of Addendum No. 1 for information on the confirmation sampling and results.

2. *Compare indoor air results to the commercial/industrial ISVs to verify system effectiveness.*

Response: Indoor air, outdoor air, and sub-slab vapor sample results are included in Table 1 and Table 3 of Addendum No. 1 and have been compared to the commercial/industrial ISVs.

3. *Repeat pressure differential diagnostic monitoring of the system during the heating season analytical sampling event.*

Response: Pressure differential testing was completed in conjunction with the post-mitigation confirmation sampling. Pressure differential results are included in Table 2 of Addendum No. 1 and in the MPCA BMP checklist D (Appendix A of Addendum No. 1).

4. Provide complete copies of MPCA BMP Attachments A,B,C and D for documenting pre-mitigation diagnostic testing, active system installation, post-mitigation diagnostic testing and post-mitigation verification testing with final documentation for the mitigation system.

Response: Copies of the MPCA BMP Attachments are included in Appendix A of the Addendum No. 1.

5. Update the Operation and Maintenance plan to include a specific schedule for when inspection, maintenance and frequency is to occur.

Response: Inspection frequency is provided on the inspection forms (previously provided in the Operations and Maintenance Plan). Updated inspection forms are included in Appendix B, and additional information on inspection and maintenance of the vapor mitigation system is included in Section 2.4 of the Addendum No. 1.

6. Provide site figures in the format of the MPCA Vapor Intrusion GIS map templates illustrating the vapor intrusion area of concern (VI AOC) and mitigation decisions for buildings based on the investigation data collected to date.

Response: A site figure in the MPCA Vapor Intrusion GIS map template showing the vapor intrusion area of concern has been provided as Figure 1 of the Addendum No. 1.

If you have any questions on the above responses, please do not hesitate to contact us at 763-489-7924 or 952-346-3867, or by email at wcarlson@carlsonmccain.com or mlindstrom@carlsonmccain.com.

Sincerely,

Carlson McCain, Inc.

1.0 INTRODUCTION

This Addendum No. 1 to the 2017 Investigation and Annual Monitoring Report has been prepared by Carlson McCain, Inc. (Carlson McCain) on behalf of Reviva for the Reviva (formerly Dealer's Manufacturing) Facility (Facility) to address additional vapor mitigation system items identified by the Minnesota Pollution Control Agency (MPCA) and provided in a letter to Reviva dated March 15, 2018. This addendum presents the results of the post-mitigation confirmation vapor sampling and verification of the sub-slab depressurization system including copies of the MPCA Best Management Practices (BMP) checklists.

1.1 Site Description

The Reviva site is located at 5130 Main St NE in Fridley, Minnesota. The site occupies approximately 5.25 acres of property consisting of paved parking area, some open grassy areas and a single-story, 58,500 square foot office/warehouse/manufacturing building. The properties adjacent to the Reviva site include warehouse/manufacturing facilities to the north and south, a Burlington Northern rail yard to the west, and a residential subdivision to the east. Reviva is located about two-thirds of a mile east of the Mississippi River, about one-quarter mile northeast of the United States Naval Industrial Reserve Ordnance Plant (NIROP), and one-quarter mile south of Kurt Manufacturing. Both of these facilities have documented releases of chlorinated solvents and both facilities have long term groundwater extraction remediation systems in place.

1.2 Site Background

During the 2017 Field Investigation, multiple VOCs were detected in the sub-slab samples collect at the Reviva Site. Trichloroethene was detected in each of the six sub-slab vapor samples from Reviva. Concentrations ranged from 266 ug/m³ (micrograms per cubic meter) to 28,500 ug/m³, which exceeded the 33 times the Intrusion Screening Value (ISV) threshold of 230 ug/m³ and the expedited ISV threshold hold of 700 ug/m³. Results of the investigation sub-slab sampling are included in Table 1. Due to the high concentrations of Trichloroethene observed beneath the slab, expedited mitigation of the Site occurred, and a sub-slab depressurization (SSD) system was installed beneath the concrete slab of the Facility.

2.0 SUB-SLAB DEPRESSURIZATION SYSTEM

The following sections describe the specific items addressed in the MPCA, vapor-related comments outlined in the March 25, 2018 letter. Section 2.1 addresses pre-mitigation testing; Section 2.2 describes the installation of the mitigation system; Section 2.3 discusses post-mitigation; and Section 2.4 addresses updates to the Operations and Maintenance Plan, specifically inspections and maintenance of the system. A site location map illustrating the building location, site property boundary, and vapor intrusion area of concern is shown on Figure 1.

Throughout the course of the SSD system installation, diagnostic testing and confirmation sampling was completed to verify the efficiency and working order of the SSD system. In conjunction with this, the MPCA checklists were completed at each stage of installation. This section summarizes the diagnostic testing, installation, and confirmation sampling of the SSD system. Completed MPCA checklists have been included in Appendix A.

2.1 Pre-Mitigation Diagnostic Testing (Pilot Testing)

As provided in the Technical Memo included in Appendix C of the 2017 Investigation and Annual Monitoring Report, the Facility intermittently operates several burners and exhaust vents during regular shift hours as part of the manufacturing processes, with fresh air in-take vents providing make-up air. Backdraft testing was not completed on each fuel-combusting appliance during the pre-mitigation diagnostic testing due to the complexity of running all appliances concurrently when plant operations could not allow such. The Facility monitors carbon monoxide at several locations inside the working areas near the fuel-combusting appliances. No carbon monoxide spillage was detected during the pre-mitigation test. Carlson McCain recommended the Facility conduct a “worst-case” backdraft test by a qualified heating, cooling, and air conditioning (HVAC) technician after the vapor mitigation system has been installed.

Based on the information presented in the Technical Memo, Reviva sealed all un-used floor drains, and existing floor drains were verified as sealed with polyurethane elastic caulk. Cracks in the concrete floor were also sealed with polyurethane caulk, and underground utilities within the building were identified prior to the SSD system installation.

Pre-mitigation testing indicated that to meet the required sub-slab pressure differential requirements, a radius of influence of approximately 52 feet was achievable for one fan, operating at full flow conditions. Additional information on pre-mitigation diagnostic testing was previously provided in the 2017 Investigation and Annual Monitoring Report, and a summary of the information is included in the MPCA “Pre-mitigation Diagnostic Checklist” provided in Appendix A.

2.2 Active System Installation Testing

The SSD system consists of 8 different sub-slab depressurization vents. Each vent was constructed of a variable length of 4-inch corrugated and perforated polyethylene drain tile placed in a pea gravel trench underneath the slab and connected to solid 4-inch schedule 40 PVC riser pipe. Pipe joints were

permanently sealed with solvent welds. The PVC riser pipe is connected to a Festa Radon Technologies Force model fan which exhausts the vapor through the roof. The fan is rated for outdoor use and is protected from weather with a cover. Each fan is labeled and has its own on/off switch, and each vent is equipped with its own manometer. Additional information on the active system installation testing is provided on the MPCA “Active System Installation” Checklist included in Appendix A.

2.3 Post-Mitigation Diagnostic Testing

The first round of post-mitigation diagnostic testing was completed on December 19, 2017. The SSD system and full plant operations were running at the time of testing. A Grey Wolf Zephyr II micromanometer was used to collect the differential pressure measurements to 0.1 pascals, and testing indicated a differential pressure of greater than five pascals at all 18 testing locations (Table 2). Due to site conditions (and as described previously) backdraft testing was not completed during post-mitigation diagnostic testing. However, it is important to note, that the testing was conducted during winter conditions, during which conditions would be considered “worst case”, as all doors, windows, etc. were closed, and all burners and exhaust vents were on and running. Testing information is provided on MPCA Attachment C, “Post-Mitigation Diagnostic Checklist”, which is included in Appendix A.

A second round of differential pressure and fan vacuum readings were collected during the post-mitigation confirmation sampling event on March 27, 2018 (See Section 3.0 for additional information on the post-mitigation confirmation sampling). The differential pressure and fan vacuum readings from December 2017 and March 2018 are provided in Table 2 and in the MPCA BMP checklist D (Appendix A). Sub-slab differential pressure readings between December and March indicated some variation, however all locations achieved the required differential pressure of 3 pascals. Results from the vacuum testing show that between December and March, there was a decrease (greater than 0.5 inches) in vacuum at vents B and D, and an increase in vacuum at vent H. While it is still yet uncertain what is causing the reduced vacuum, the system is still effectively running according to design and meeting project goals.

2.4 Operations and Maintenance Plan Update

Inspection of the SSD system will occur on a quarterly and annual basis. Quarterly inspections will consist of verifying the fan flow rates and vacuum in the riser pipe. Quarterly inspections will occur within the time frames provided on the inspection forms in Appendix B. Annual inspection of the SSD system will occur during the Quarter 1 time frame, and will verify that the SSD system continues to be in working order; this includes measuring the pressure differential at select sub-slab vapor pin locations.

Ideally, inspections will identify any performance issues with the system prior to system failure. Maintenance will occur on an as-needed basis when inspections determine it is necessary or the system malfunctions. If a portion of the system needs to be serviced, the system is designed such that servicing one vent or fan will not affect the remainder of the system. Redundancy is provided by over-lapping the radius of influence between individual fans, thereby still providing some level of mitigation during periods of maintenance.

3.0 POST-MITIGATION CONFIRMATION AIR AND VAPOR SAMPLING

In order to verify the effectiveness of the SSD system, six sub-slab vapor samples and paired indoor air samples were collected on March 27, 2018. A paired outdoor air sample was also collected at the same time. Locations of each vapor sample collected during post-mitigation sampling corresponded to the same initial locations sampled during the investigation. Each sample was analyzed for volatile organic compounds (VOCs) using EPA method TO-15. These samples represent both heating season and post-mitigation confirmation samples. Sample locations are shown on Figure 2, and a copy of the TestAmerica laboratory report is included in Appendix C.

3.1 Sub-Slab Soil Vapor Sampling

Sub-slab soil vapor samples were collected by using the Vapor Pin® vapor ports previously installed during the 2017 investigation. Prior to collecting the sample, a sample train consisting of three valves was installed to connect the vapor port to sample canister. The tubing, canister, and vapor pin were leak tested at each sampling point by installing a water dam around the vapor pin and leak tightness of the system was verified by leaving the water dam in-place throughout the duration of the sample collection. The sampling train was also verified for air tightness by performing a shut-in test prior to sample collection. Once two volumes of air were purged from the tubing by using a syringe, the flow controller (which, in turn, is connected to a Summa canister) was opened to collect the sub-slab soil gas sample at a flow rate of 200 milliliters per minute. Upon completion, the tubing was then connected to a PID to obtain a field measurement for the presence of organic vapors. The tubing was then removed and the Vapor Pin® covered with a protective cap. In addition, a stainless steel protective cover was installed at the slab surface to prevent damage to the pin.

Each canister was labeled with the name of the sampler, date, time, initial/final vacuum gauge readings and PID readings from the sample tubing. This information was also recorded on the Chain-Of-Custody form for the canisters. The canisters were then placed in a box, fitted with bubble wrap, and delivered to the laboratory for analysis.

Laboratory certified clean and laboratory batch-certified clean Summa canisters and gauges, and new disposable tubing, fittings, valves, and disposable gloves were used at each vapor sampling location to minimize the potential for cross-contamination.

3.2 Indoor and Outdoor Air Sampling

One outdoor air and six indoor air samples were collected during the same time as the sub-slab samples. The samples were collected over a 24-hour period at the locations identified on Figure 2. Each canister was labeled with the name of the sampler, ending date and time, and initial/final vacuum gauge readings. Laboratory certified clean Summa canisters and gauges, and disposable gloves were used to minimize the potential for cross-contamination.

3.3 Post-Mitigation Confirmation Sampling Results and Discussion

Results from the post-mitigation confirmation sampling are included in Table 3 and have been compared to MPCA ISV thresholds. Concentrations of Trichloroethene in the sub-slab exceeded the ISV during confirmation sampling at locations AS-1, AS-2, AS-4, and AS-6; however, all of the detected concentrations were below the threshold of 33 times the ISV. In fact, all concentrations were significantly less than those detected during the investigation sub-slab sampling. It should be noted that concentrations at AS-4 have been reduced from 28,500 ug/m³ (highest observed during the investigation) to 15.3 ug/m³. Trichloroethene was not detected at sub-slab samples AS-3 and AS-5, and no other VOCs exceeded the ISV beneath the slab during post-mitigation confirmation sampling.

Trichloroethene was below laboratory reporting limits in all indoor air and outdoor air samples (Table 3). Multiple VOCs were detected in the indoor air samples, however concentrations for all detected parameters were well below their respective ISV threshold value.

4.0 CONCLUSIONS AND RECOMMENDATIONS

4.1 Conclusions

Based on the results of the diagnostic testing completed on the SSD system and post-mitigation confirmation vapor sampling the following conclusions can be made:

- While differences in differential pressures were observed between the December 2017 and March 2018 testing events at the 18 locations, the heating season differential pressure requirements of 3 pascals is being met.
- A slight drop in fan vacuum was observed at vents B and D between December 2017 and March 2018, however differential pressure requirements across the Facility continue to be met and the system continues to run as designed.
- The system is effective at removing vapors from beneath the slab and achieving indoor air quality standards. Concentrations of Trichloroethene beneath the slab have been reduced from a high of 28,500 ug/m³ to below either ISVs or below laboratory detection limits.

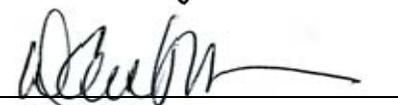

4.2 Recommendations

At this time, no modifications to the SSD system are being recommended. The SSD system will continue to be monitored and maintained by Reviva in accordance with the Operations and Maintenance Plan and MPCA BMPs. Differential pressure measurements will be collected to verify requirements are being met, and will continue throughout the life of the mitigation system. No further vapor sampling is scheduled, unless Site or building conditions change.

5.0 CERTIFICATION

Carlson McCain has prepared this Addendum No. 1 to the 2017 Field Investigation and Annual Monitoring Report for the exclusive use of Reviva for specific application to the Former Dealers Manufacturing Site located in Fridley, Minnesota. The services performed by Carlson McCain for this project have been conducted in a manner consistent with the level of skill and care ordinarily exercised by other members of the profession currently practicing in this area. No other warranty, expressed or implied, is made.

I certify that this document and all attachments were prepared under my direction or supervision under a system designed to assure that qualified personnel gathered and evaluated the information submitted. Based on my inquiry of the persons or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete.

Notes:
 Results are in µg/m³ (micrograms per cubic meter, which is equivalent to parts per billion)
Bold - Detected Concentration
 < - Less than
 IND ISV = Industrial intrusion screening values
 EISVs = Expedited intrusion screening values
 33X accounts for the U.S. Environmental Protection Agency (EPA) default vapor intrusion attenuation factor of 0.03

- Indoor ambient air sample.
 - Sub-slab soil vapor sample.
 - Outdoor air sample.
 - Sample result exceeded Industrial ISV
 - Sample result exceeded 33x Industrial ISV
 - Sample result exceeded 33x Industrial EISV

Pre-Mitigation Diagnostic Checklist

Remediation Program
Vapor Intrusion/Mitigation

Doc Type: Site Inspection Information

Instructions: This checklist is to be completed by the contractor conducting pre-mitigation diagnostic testing prior to installation of a sub-slab depressurization (SSD) system as a building control for vapor mitigation. A copy of the completed checklist should be included in Appendix D of the Property Summary Report (PSR) which documents vapor mitigation activities completed for the property.

1. General site and contractor information

- 1.1 Site name: Reviva
- 1.2 MPCA site ID number: SR0000027
- 1.3 Property address: 5130 Main Street NE, Fridley, MN 55421
- 1.4 Property owner name: Reviva Inc.
- 1.5 Property owner phone/email: 763-535-8900
- 1.6 Date of pre-mitigation diagnostic testing (mm/dd/yyyy): 8/7/17 - 8/8/17
- 1.7 Installation contractor name: Carlson McCain
- 1.8 Installation contractor phone/email: 952-346-3900, ifuhr@carlsonmccain.com

2. Backdraft testing

Procedures for checking combustion appliance backdrafting can be found in section 11.5 of EPA, 1993.

- 2.1 Check the ambient air within the building with a multi-gas meter and photo-ionization detector (PID) for potential environments of concern and provide the highest observed readings for the following:
- Oxygen: _____ Lower explosive limit (LEL): _____ Carbon Monoxide: _____
- Hydrogen Sulfide: _____ PID: _____ Location of highest readings (room): _____
- 2.2 Identify all combustion appliances present in the building:
- Clothes dryer Water heater Central furnace Gravity furnace Floor furnace
- Wood fireplace Gas fireplace Space heater Boiler Wood stove Gas stove
- Other (specify): _____ Primary fuel type: _____
- 2.3 Which of the appliances identified above have natural draft exhaust: _____
- 2.4 Which of the appliances identified above have mechanical/forced exhaust: _____
- 2.5 Were backdrafting conditions observed in any of the combustion appliances identified above? Yes No
- 2.6 Is yes, which appliances: _____
- 2.7 If backdrafting conditions were observed, was the property owner and tenant(s) notified? Yes No

3. Outside make-up air

- 3.1 Is outside make-up air currently provided for all rooms containing a combustion appliance? Yes No
- 3.2 If no, was outside make-up air installed? Yes No
(Outside make-up air shall be installed prior to conducting any further pre-mitigation diagnostic testing)
- 3.3 Make-up air installation date (mm/dd/yyyy): _____ Make-up air installed by: _____
- 3.4 Were all the required permits obtained for the outside make-up air installation work? Yes No
- 3.5 Were backdraft conditions (see section 2 above) rechecked after make-up air was installed? Yes No

4. Utility information

It is the installation contractor's responsibility to confirm locations of underground and in-floor utilities prior to conducting floor slab or excavation work.

4.1 Were utility locations confirmed prior to floor slab or excavation work? Yes No

4.2 Explain how utility locations were confirmed:

Plant records

5. Sealing of potential vapor intrusion points

At a minimum, identify and seal the following openings, if present:

Cold Joint Utility Penetrations Sump Baskets Expansion Joints Un-trapped floor drains to soil
 Cracks/holes greater than 1/32 inch wide Other (specify): Owner sealed cracks as recommended by Engineer

6. Confirm all proposed suction points, fan location(s) and system piping routes with the property owner

Prior to selecting suction points consider the site conceptual model (SCM) including soil type, depth to groundwater, location and source of vapors (soil and/or groundwater) evidence of infiltration (groundwater or surface water).

7. Test suction point information

Illustrate test suction point locations on scaled floor plan in Section 10. (Reminder: The exhaust for the suction point fan shall be discharged to outside air during pre-mitigation diagnostic testing.)

7.1 Is an existing vapor barrier present? Yes No

7.2 Total number of test suction points installed: 1 (pilot test included 20' long sample vent)

7.3 Diameter of test suction point(s): 4" diameter drain tile in 12"x12" trench, 20 lineal feet

7.4 Volume of soil removed (loose) from each test suction point: 20 yard³ or feet³

8. PFE Test Point Information

Illustrate pressure field extension (PFE) test point locations on scaled floor plan in Section 10.

8.1 Total number of pre-mitigation PFE test points completed: 9

8.2 Approximate total square footage of building footprint: 65,000

8.3 Was pre-mitigation PFE testing conducted with all combustion appliances and exhaust fan/venting appliances operating and all outside windows and doors closed to provide "worst-case" conditions? Yes No

8.4 Did all of the pre-mitigation PFE test points demonstrate a pressure differential greater than or equal to the MPCA default pressure differential (3 pascals in winter/5 pascals in summer)? Yes No

8.5 Document pre-mitigation PFE test point measurements on the summary table in Section 9.

8.6 Were the PFE test points temporarily sealed and left in place for future testing? Yes No

8.6 Were the PFE test points permanently sealed upon completion of diagnostic testing? Yes No

9. Fan selection information based on pre-mitigation diagnostic testing results

9.1 Number of fans required based on diagnostics: 6

9.2 Fan make/model: AMG Force

9.3 Maximum Wattage: 300

9.4 Fan manufacturer's specifications for maximum CFM and pressure: 240 CFM and 5.512" H2O

10. Summary of pre-mitigation PFE diagnostic testing measurements

- 10.1 Site ID number: _____
- 10.2 Property address: 5130 Main St NE, Fridley, MN
- 10.3 Person completing measurements: Isaac Fuhr, Megan Lindstrom

Active Mitigation System Installation Checklist

 Remediation Program
Vapor Intrusion/Mitigation

Doc Type: Site Inspection Information

Instructions: This checklist is to be completed by the contractor conducting installation of an active mitigation system as a building control for vapor mitigation. A copy of the completed checklist should be included in Appendix D of the Property Summary Report (PSR) which documents vapor mitigation activities completed for the property.

1. General site and contractor information

- 1.1 Site name: Reviva
- 1.2 MPCA site ID number: SR0000027
- 1.3 Property address: 5130 Main St NE, Fridley, MN 55421
- 1.4 Property owner name: Reviva
- 1.5 Property owner phone/email: 763-535-8900
- 1.6 Date(s) of mitigation system installation (mm/dd/yyyy): 9/1/2017
- 1.7 Installation contractor name: Olson Concrete (demo and concrete), Reviva (pipe), Davco (electric), Ben Rehak (roofing)
- 1.8 Installation contractor phone/email: 952-448-6647, 763-971-6235, 651-347-4567, 651-900-4667

2. System component considerations

- | | Yes | No | NA |
|---------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------|-------------------------------------|-------------------------------------|
| 2.1 Is there evidence that contaminant type(s) and concentrations are present that warrant consideration of intrinsically safe system components? | <input type="checkbox"/> | <input checked="" type="checkbox"/> | |
| 2.2 If yes, has the system been constructed to be intrinsically safe? | <input type="checkbox"/> | <input type="checkbox"/> | <input checked="" type="checkbox"/> |
| 2.3 Were the locations of all system components (suction points, fans, and system piping) approved by the property owner prior to installation? | <input checked="" type="checkbox"/> | <input type="checkbox"/> | |
| 2.4 Illustrate active mitigation system component locations on the floor plan in Section 9. | <input checked="" type="checkbox"/> | <input type="checkbox"/> | |

3. System installation and interior piping

- | | Yes | No | NA |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------|--------------------------|--------------------------|
| 3.1 Are all suction point, manifold, exhaust piping and fittings solid, Schedule 40 pipe not less than 3 inches inside diameter? | <input checked="" type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> |
| 3.2 Indicate the diameter of suction, manifold and exhaust pipes:
<input type="checkbox"/> 3 inch (suction/manifold/exhaust)
<input checked="" type="checkbox"/> 4 inch (suction/manifold/exhaust)
<input type="checkbox"/> 6 inch (suction/manifold/exhaust)
<input type="checkbox"/> 8 inch (suction/manifold/exhaust)
<input type="checkbox"/> Other (list): _____ | | | |
| 3.3 Are all pipe interior joints and connections in mitigation systems sealed permanently? (Exceptions include installation of fans and sump covers) | <input checked="" type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> |
| 3.4 Does the system piping avoid attachment to or support by existing pipes, ducts, conduits or any kind of equipment? | <input checked="" type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> |
| 3.5 Does the system piping avoid blocking window and doors or access to installed equipment? | <input checked="" type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> |
| 3.6 Are supports for system piping installed at least every six (6) feet on horizontal runs? | <input checked="" type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> |
| 3.7 Are vertical runs secured above or below the points of penetration through floors, ceilings | <input checked="" type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> |

	Yes	No	NA
and roofs, or at least every (8) feet on runs that do not penetrate floors, ceilings, or roofs?			
3.8 Are suction point pipes supported and secured in a permanent manner that prevents their downward movement to the bottom of suction pits or sump pits, or into the soil beneath a soil-gas-retarder membrane?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
3.9 Vent pipes are installed in a configuration that ensures that any rain water or condensation drains downward into the ground beneath the slab or soil gas retarder membrane?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
3.9 Vent pipes are installed in a configuration that ensures that any rain water or condensation drains downward into the ground beneath the slab or soil gas retarder membrane?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
3.10 Are fire collars installed around any piping that penetrates a firewall?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

4. Fan installation information

4.1 Total number of fans installed: <u>8</u>			
4.2 Fan make and model: <u>AMG Force</u>			
4.3 Maximum wattage: <u>300</u>			
4.4 Fan manufacturer's specifications for maximum CFM and pressure: <u>240 CFM and 5.512" H2O</u>			
4.5 Indicate the locations of all installed mitigation system fans. Fans are to be installed in unconditioned spaces: <input type="checkbox"/> Attic (unconditioned) <input type="checkbox"/> Garage <input checked="" type="checkbox"/> Outside <input type="checkbox"/> 8 inch (suction/manifold/exhaust) <input type="checkbox"/> Other (specify): _____			
	Yes	No	NA
4.6 Is the fan installed in a vertical run of the vent pipe?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
4.7 Is the fan mounted to the vent pipe with removable or flexible connections?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
4.8 If the fan is mounted on the exterior of the building, is it rated for outdoor use or installed in a weather proof protective housing?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
4.9 If the fan is mounted on the exterior of the building, is the fan and pipe run chased and insulated to prevent freezing in winter conditions? Exhaust air is warm, constant flow prevents freezing	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
4.10 Does the system operate without noise or vibration above normal conditions?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
4.11 Is the total circuit load <80% of capacity (12 amps for 15 amp circuit, 16 for 20 amp circuit)?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
4.12 Is the fan on a dedicated circuit if the load is >50% of capacity?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

5. Monitors and labeling

	Yes	No	NA
5.1 Is a manometer (or other approved indicator device) installed on at least one of the suction points of the mitigation system to allow for confirmation of system operation?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
5.2 Is a system description label placed on the mitigation system?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
5.3 Initial system differential pressure: <u>2.0-2.5</u> inches of water column Date of initial differential pressure reading (mm/dd/yyyy): <u>12/19/2017</u>			
5.4 Is the label legible from a distance of at least three feet and does it display the following information: Purpose of the system (Vapor Intrusion Mitigation), name and phone number of the contact person?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
5.5 Are vent pipes labeled on each level where pipe is visible?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
5.6 Is the circuit breaker controlling the circuit on which the vent fan operates labeled?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
5.7 Is the current vacuum reading within 0.25" water of the initial reading for low vacuum fans and within 5% of the commissioned vacuum for high vacuum fans?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
5.8 Was the system tested in the worst case scenario (e.g., all fans/dryers/vents, furnace/HVAC/ air exchangers) in operation?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
5.9 Was a carbon monoxide (CO) detector installed or present and operable in the building after active system installation? Owner has information	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
5.10 If yes, where is the carbon monoxide detector located: _____			

6. System vent discharge

	Yes	No	NA
6.1 Is the vent pipe vertical and upward, outside the structure, at least 10 feet above ground level, and above the edge of the roof? (Req. A)	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
6.2 Is the discharge of the vent pipe ten feet or more away from any window, door, or other opening into conditioned or otherwise occupiable spaces of the structure, if the vapor discharge point is not at least 2 feet above the top of such openings? (Req. B)	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
6.3 Is the discharge of the vent pipe ten feet or more away from any opening into the conditioned or other occupiable spaces of an adjacent building? Chimney flues shall be considered openings. (Req. C)	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
6.4 For vent stack pipes that penetrate the roof, is the point of discharge at least 12 in. above the surface of the roof? (Req. D)	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
6.5 For vent stack pipes attached to or penetrating the sides of the buildings, is the point of discharge vertical and a minimum of 12 inches above the surface of the roof?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
6.6 Does the horizontal run of vent stack pipe penetrate the gable end walls? (Req. E)	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
6.7 If yes, is the piping outside the structure routed to a vertical position so that the discharge point meets the requirements of (A), (B), (C), and (D) listed above?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
6.8 Do points of discharge that are not in a direct line of sight from openings into conditioned or otherwise occupiable space because of intervening objects, such as dormers, chimneys, windows around the corner, etc. meet the separation requirements of (A), (B), (C), (D) and (E)?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
6.9 Is the outside vent piping fastened to the structure of the building with hangers, strapping or other supports that will secure it adequately (every 8 feet)?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
6.10 Is vent stack piping's inner diameter at least as large as the largest used in the manifold piping?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
6.11 If system piping is installed on the exterior of a building, is piping and electric conduit sealed from the outside at point of entry into the building?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

7. Sump pit

Provide written and verbal communication to the property owner and tenants for the requirement to keep the sump sealed and to re-seal in the event that the seal is broken during maintenance activities.

	Yes	No	NA
7.1 Is there a sump pit present?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
7.2 If yes, indicate number and location(s): _____			
7.3 Is the sump pit cover constructed to facilitate removal for sump pump/pit maintenance?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
7.4 Is the mitigation system constructed to draw soil-gas from the sump pit?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
7.5 If yes, does the vent pipe have a disconnect for easy removal for sump pump maintenance?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

8. Crawlspace sub-membrane depressurization system

	Yes	No	NA
8.1 Was a sub-membrane depressurization system installed in a crawlspace area or area without a concrete floor as part of the mitigation system?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
8.2 Is the vapor barrier membrane a minimum of 6 mil (3 mil cross-laminated) polyethylene?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
8.3 Are the seams overlapped at least 12 inches and sealed using compatible materials?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
8.4 Is the vapor barrier membrane secured to the wall using furring strips or appropriate sealants	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
8.5 Did the sub-membrane depressurization system pass the smoke test after installation?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

9. Active mitigation system diagram

Include: suction points, fans, system manometer, sumps, crawl spaces, system piping, exhaust discharge, electrical panel.

Post-Mitigation Diagnostic Checklist

Remediation Program
Vapor Intrusion/Mitigation

Doc Type: Site Inspection Information

Instructions: This checklist is to be completed by the contractor conducting post-mitigation diagnostic testing after installation of a sub-slab depressurization (SSD) system as a building control for vapor mitigation. A copy of the completed checklist should be included in Appendix D of the Property Summary Report (PSR) which documents vapor mitigation activities completed for the property.

1. General site and property information

- 1.1 Site name: Reviva
- 1.2 MPCA site ID number: SR0000027
- 1.3 Property address: 5130 Main St NE, Fridley, MN 55421
- 1.4 Property owner name: Reviva
- 1.5 Property owner phone/email: 763-535-8900
- 1.6 Date of pre-mitigation diagnostic testing (mm/dd/yyyy): 12/19/2017
- 1.7 Installation contractor name: Olson Concrete (demo and concrete), Reviva (pipe), Davco (electric), Ben Rehak (roofing)
- 1.8 Installation contractor phone/email: 952-448-6647, 763-971-6235, 651-347-4567, 651-900-4667

2. Post-mitigation pressure field extension (PFE) test point information

- 2.1 Total number of post-mitigation PFE test points: 18
(Illustrate locations of PFE test points on the Floor Plan in Section 5)
- 2.2 Approximate total square footage of building footprint: 65,000
- 2.3 Was post-mitigation PFE testing conducted with all combustion appliances and exhaust fan/venting appliances operating and all exterior windows and doors closed to provide "worst-case" conditions? Yes No
- 2.4 Did all of the post-mitigation PFE test points demonstrate a pressure differential greater than or equal to the MPCA default pressure differential (3 pascals in winter/5 pascals in summer)? Yes No
- 2.5 Document post-mitigation PFE test point measurements on the Section 4 summary table.

3. Backdraft testing *Owner to complete back-draft testing independently

Procedures for checking combustion appliance backdrafting can be found in section 11.5 of EPA, 1993.

- 3.1 Check the ambient air within the building with a multi-gas meter and photo-ionization detector (PID) for potential environments of concern and provide the highest observed readings for the following:
Oxygen: _____ Lower explosive limit (LEL): _____ Carbon Monoxide: _____
Hydrogen Sulfide: _____ PID: _____ Location of highest readings (room): _____
- 3.2 Identify all combustion appliances present in the building:
 Clothes dryer Water heater Central furnace Gravity furnace Floor furnace
 Wood fireplace Gas fireplace Space heater Boiler Wood stove Gas stove
 Other (specify): _____ Primary fuel type: _____
- 3.3 Which of the appliances identified above have natural draft exhaust: _____
- 3.4 Which of the appliances identified above have mechanical/forced exhaust: _____
- 3.5 Were backdraft conditions identified in any of the identified combustion appliances during the post-mitigation backdraft testing? Yes No
- 3.6 If post-mitigation backdraft conditions were identified, notify the property owner immediately and turn off the active vapor mitigation system until the backdraft conditions are corrected.

4. Summary of post-mitigation PFE diagnostic testing measurements

- 4.1 Site ID number: _____
- 4.2 Property address: 5130 Main St NE, Fridley, MN 55421
- 4.3 Person completing measurements: Dan Margarit
- 4.4 Make and model of manometer used for PFE diagnostic testing: Grey Wolf Zephyr 2

Post-Mitigation Confirmation Sampling Checklist

 Remediation Program
Vapor Intrusion/Mitigation

Doc Type: Site Inspection Information

Instructions: This checklist is to be completed by the contractor conducting post-mitigation confirmation sampling after installation of a sub-slab depressurization (SSD) system as a building control for vapor mitigation. A copy of the completed checklist should be included in Appendix D of the Property Summary Report (PSR) which documents vapor mitigation activities completed for the property.

1. General site and property information

- 1.1 Site name: Reviva (Formerly Dealer's Manufacturing)
- 1.2 MPCA site ID number: SR0000027
- 1.3 Property address: 5130 Main St NE, Fridley, MN 55421
- 1.4 Property owner name: Reviva
- 1.5 Property owner phone/email: 763-535-8900
- 1.6 Date of post-mitigation confirmation sampling: 3/27/2018
- 1.7 Sampling contractor name: Carlson McCain, Inc.
- 1.8 Sampling contractor phone/email: 763-489-7900

2. Post-mitigation confirmation indoor/outdoor air sampling

- 2.1 A minimum of two weeks prior to indoor air sample collection, complete Part 2 (Indoor Air Quality Survey) of the MPCA's Vapor Intrusion Building Survey Form to document potential indoor air sources of volatile organic compounds (VOCs). Document if the chemical products were removed prior to sampling or not.
- 2.2 Indoor and outdoor air samples should be collected in individually certified air sampling canisters with a flow restrictor set to collect the sample over an approximately twenty-four hour time period.
- 2.3 Document indoor/outdoor air sample collection information on a Sample Collection Data Sheet (example provided below).
- 2.4 Illustrate the indoor air sample location(s) on the floor plan in Section 8.
- 2.5 Illustrate the outdoor ambient air sample location on the Outdoor Grid Plot in Section 9.

3. Indoor/Outdoor air sample collection data *See additional pages for

Appendix B – Updated Inspection Forms

**Annual Inspections
 (To be completed between January-March)**

Inspection Item	Sign and Date Upon Completion	Notes / Corrective Action
Inspect all visible components of the vapor mitigation system including fans, piping, seals and hangers to ensure there are no signs of degradation or blockage		
Examine as-built plans to verify the system configuration has not been modified		
Inspect external electrical components to identify undesirable conditions, such as excessive noise, vibration, moisture or corrosion, and to verify that the fan cut-off switch is operable. Noisy fans typically indicate problems with the ball bearings and warrant replacement on that basis.		
Visually inspect the building to evaluate whether any significant changes were made that would affect the design of the system or general environment in which it is operated		
Visually inspect the area of concern (including cracks in the floor, sumps, floor drains and utility penetrations) to ensure there are no significant changes in conditions that would warrant modification of the system design		
Confirmation that the building owner or occupant is knowledgeable about the operation and maintenance of the system. Confirmation that a copy of the O&M manual is present in the building and has been updated as necessary.		

Sub-Slab Pressure Inspections
(Complete in Quarter 1)

Selected Vapor Pin Sampling Locations (see Figure 3)	Sub-Slab Vacuum Pressure (Pascals) - relative to indoor plant air
AS-2	
AS-12	
AS-13	
AS-16	
AS-17	
AS-19	
AS-20	
AS-22	

Sign: _____

Date: _____

Notes:

1. If sub-slab vacuum is below 5 Pa in the non-heating season (or 3 Pa in the heating season), proceed to troubleshooting.
2. Non-heating season - May 1 to November 1
3. Quarter 1 is from January to March

Quarterly Inspections

	Sign and Date Upon Completion			
	Quarter 1 (January - March)	Quarter 2 (April - June)	Quarter 3 (July - September)	Quarter 4 (October - December)
Monitor vent risers for flow rates and pressures generated by the fans to confirm the system is working, not plugged and moisture is draining correctly. Complete data section below for each quarter.	Signature:	Signature:	Signature:	Signature:
	Date:	Date:	Date:	Date:

Vent Location	Vacuum in Riser Pipe				Fan Flow Rate				Fan Velocity at System Start-up (ft/min)	Notes
	Slide manometer measurement gauge until liquid levels read equal on the left and right of the gauge. Record vacuum measurement in inches of water (Should be 2.0 to 2.5 ")				Inspect fan outlets on roof, use flow meter during fan operation and record velocity in feet per minute (should be close to velocity in next column)					
	Quarter 1	Quarter 2	Quarter 3	Quarter 4	Quarter 1	Quarter 2	Quarter 3	Quarter 4		
Vent A									880	
Vent B									540	
Vent C									760	
Vent D									440	
Vent E									500	
Vent F									690	
Vent G									420	
Vent H									210	

*Note: It is important to check fan velocity at outlet, even after checking vacuum. It's possible that the fan is operating, and vacuum is present, but the pipe is clogged near the transition under the slab. In this case lower velocity and higher vacuums would exist.

The test results in this report meet all 2003 NELAC and 2009 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Qualifiers

Air - GC/MS VOA TICs

Qualifier	Qualifier Description
J	Indicates an Estimated Value for TICs
N	Presumptive evidence of material.
T	Result is a tentatively identified compound (TIC) and an estimated value.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
α	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Narrative

CASE NARRATIVE

Client: Carlson McCain, Inc.

Project: Reviva Confirm

Report Number: 200-42829-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

RECEIPT

The samples were received on 03/28/2018; the samples arrived in good condition.

VOLATILE ORGANIC COMPOUNDS

Samples AS-1B, AS-2B, AS-3B, AS-4B, AS-5B, AS-6B, VP-1B, VP-2B, VP-3B, VP-4B, VP-5B, VP-6B and VP-7B were analyzed for Volatile Organic Compounds in accordance with EPA Method TO-15. The samples were analyzed on 03/29/2018 and 03/30/2018.

Samples AS-1B[10X], AS-2B[10X], AS-3B[10X], AS-4B[10X], AS-5B[10X], AS-6B[10X], VP-1B[2X], VP-2B[5X], VP-3B[2X], VP-4B[2X], VP-6B and VP-7B[4X] required dilution prior to analysis. The reporting limits have been adjusted accordingly.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Job Number: 200-42829-1
SDG Number: 200-42829-1

Login Number: 42829
List Number: 1
Creator: Lavigne, Scott M

List Source: TestAmerica Burlington

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	True	Lab does not accept radioactive samples.
The cooler's custody seal, if present, is intact.	True	024516,517,518
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	N/A	Thermal preservation not required.
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	N/A	Thermal preservation not required.
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	N/A	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

11	XXXX	XXXX	XXXX	XXXX	XXXX	XXXX	XXXX	XXXX	XXXX
12	XXXX	XXXX	XXXX	XXXX	XXXX	XXXX	XXXX	XXXX	XXXX

¹ Batch Certification: The reading is taken on the "batch" canister and this value is used as the initial pressure for all canisters in the batch.
³ Difference = Final Pressure - Initial Pressure . Acceptance Criteria: (1) The difference must be less than or equal to + 0.25psi. (2) Pressure readings must be at least 24 hours apart.

If time frame was not met, the PM must authorize shipment of canister **PM Authorization** Date:

TestAmerica Burlington

Data File: \\ChromNA\Burlington\ChromData\CHC.i\20180313-29551.b\29551_20.D

Injection Date: 14-Mar-2018 02:26:30

Instrument ID: CHC.i

Operator ID: pad

Lims ID: 200-42577-A-8

Lab Sample ID: 200-42577-8

Worklist Smp#: 20

Client ID: 6491

Purge Vol: 200.000 mL

Dil. Factor: 1.0000

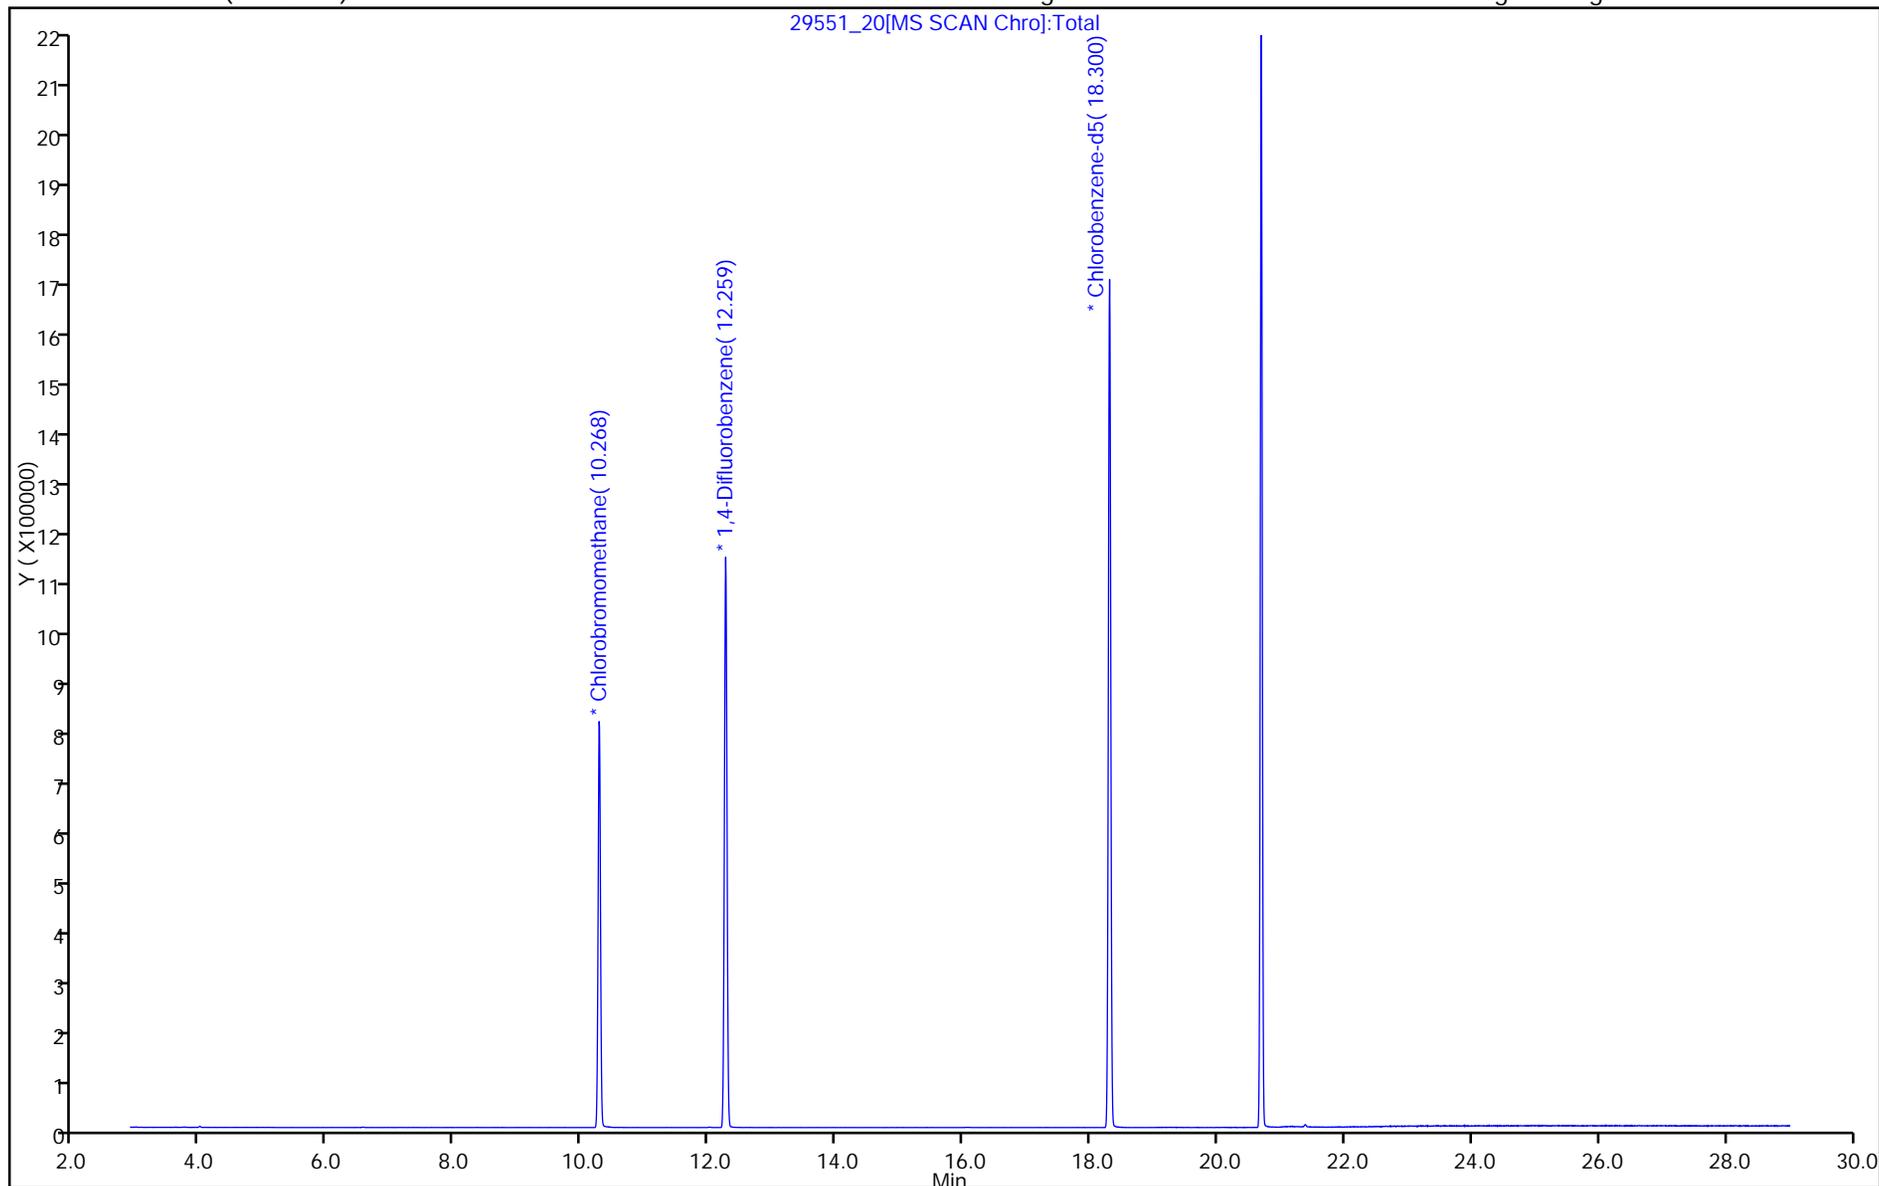

ALS Bottle#: 20

Method: TO15_MasterMethod_(v1)_CHC.i

Limit Group: AI_TO15_ICAL

Column: RTX-624 (0.32 mm)

Y Scaling: Method Defined: Scale to the Nth Largest Target: 1
