Date

1.0 Introduction

This report has been prepared by Barr Engineering Co. (Barr) on behalf of the Minnesota Pollution Control Agency's (MPCA) Closed Landfill Program (CLP). This report provides a summary of the Phase A Investigation's findings and results, an evaluation of data gaps, and recommendations for additional investigation at the Freeway Dump, Freeway Landfill, and Freeway Transfer Station (the Site).

The investigation was conducted in the spring of 2018 and generally followed the conceptual *Investigation & Sampling Plan*, written by MPCA (MPCA, 2017). The MPCA plan was informed by findings from previous investigations at both the Landfill and Dump and outlined a scope that included sampling of soil, waste material, and groundwater, as well as screening of landfill gas. Based on MPCA's conceptual plan, Barr developed a specific scope of work to complete the investigations (Barr, 2017).

The intent of the report is to provide a brief summary of the site history and a comprehensive summary of the site investigation activities. The report is organized as follows:

- 1.0 Introduction:** describes the content and objectives of this report.
- 2.0 Background:** provides general site background information including a description and brief history of each project area.
- 3.0 Site Investigation:** includes a discussion of the activities completed to evaluate the extent of waste material as well as solid media and water quality.
- 4.0 Investigation Results:** describes the results of the investigation conducted in the spring of 2018, including a description of the different solid media encountered as well as solid media and water quality results.
- 5.0 Site Conceptual Model:** provides a summary of the current understanding of the Site subsurface conditions.
- 6.0 Data Gaps and Recommendations:** identifies aspects of the Site that have not been fully characterized and provides brief recommendations for future investigative activities.
- 7.0 References:** includes a summary of references cited in the report.

2.0 Background

The Site comprises three project areas ([Figure 1](#)): the Freeway Dump (Dump), the Freeway Landfill (Landfill), and the Freeway Transfer Station (Transfer Station). All three areas are located in Burnsville, Dakota County, Minnesota and are owned by either the R.B. McGowan Company, Inc. or Freeway Transfer Company, Inc. This section provides a descriptive and historical summary of each project area.

2.1 Site Location and Description

The following paragraphs provide a brief description of each project area.

Freeway Dump

Freeway Dump is an unlined inactive dump located at 11937 Highway 35 W (Parcel ID: 02-03410-38-010), Burnsville, at the north end of the east service road for Highway 35W, north of the Cliff Road interchange. The Dump encompasses approximately 28 acres and has recently been used as a golf driving range. Two trailers and one small building are located on the Property. The surrounding properties include the wetlands of the Minnesota Valley Wildlife Refuge to the north and east, the Edward Kraemer and Sons quarry (Kraemer Quarry) to the west (west of Highway 35W), and commercial properties to the south, including storage facilities and a car dealership.

The Dump is a mostly flat-top mound that sits above the surrounding wetland to the north and east. The general topographic gradient of the Dump and the land near the Dump trends to the north towards Black Dog Lake and the Minnesota River. The surrounding wetland is located at an elevation ranging from approximately 700 feet above mean sea level (MSL) along the north perimeter to about 710 feet MSL to the southeast of the Dump. The elevation of the Dump ranges from approximately 720 feet MSL along the north boundary to 730 feet MSL in the south. The raised elevation of the Dump extends beyond the north and east boundaries of the Dump property.

Freeway Landfill

The Landfill consists of several parcels, totaling approximately 189 acres, 131 of which were used for placement of waste during landfill operation and approximately 58 of which include a quarry and undeveloped land ([Liesch, 1993](#)). The landfill is primarily located on the following Parcels: 02-15600-00-010; 02-15600-00-060; 02-15600-00-020, 02-15600-02-010; 02-15600-00-030; 02-15600-00-040; and 02-15600-00-050.

The landfill is an unlined, inactive landfill located just south of the Minnesota River ([Figure 1](#)). The surrounding properties include the U.S. Salt Company to the north and Highway 35W to the east. Kraemer Quarry is located to the south. The vacant land to the west is also owned by Kraemer Quarry.

The average water level for the Minnesota River located north of the Landfill is approximately 691 feet MSL ([USACE, 2018](#)). The 100-year flood elevation is 716 feet MSL ([FEMA, 2011](#)), and the recorded historical river level extremes at the nearby Savage river gage are 719.40 feet on April 15, 1965 and 687.05 feet on October 29, 1976 ([NWS, 2018](#)). It is recognized that river elevation sources are based on different

vertical datums (i.e., 1912 Mean Sea Level Datum, North American Vertical Datum 1929, and NAVD 1988). However, the difference between those datums for the Minnesota River elevation is only 0.54 feet.

Prior to landfill operations commencing, the topography of the Landfill area likely varied from 696 to 705 feet MSL (Liesch, 1991). According to current Lidar survey data (Fugro and MDNR, 2011), the maximum elevation of the Landfill is approximately 750 feet MSL at its peak near the center of the property. The ground surface slopes downward in all directions to an elevation of approximately 700 feet MSL at the property limits. This slope is relatively gentle, generally ranging from 2% to 4%, with the exception of the east and south edges, where steeper 20-30 foot long slopes up to approximately 30% are present. The ridge on the east side of the Landfill is part of an intermittent surface water channel that runs north to the river, between the Landfill and Highway 35W.

Freeway Transfer Station

The Transfer Station is located at 11501 Embassy Road (Parcel ID: 02-15600-01010), Burnsville. The Transfer Station is located on the east side of the Landfill property, approximately 1,500 feet south of the Minnesota River, and currently operates as a waste processing, recycling, and hauling facility. Topographically, the Transfer Station is located in a depressed area at approximately 710 feet MSL. Surrounding the Transfer Station to the north, south, and east is a berm feature that rises to approximately 745 feet MSL, and to the west is the access road that rises out from the station to Landfill grade of approximately 735 feet MSL.

2.2 Site History

A background review was conducted that included reviewing historic landfill records and files and reviewing historic aerial imagery. The MPCA provided Barr with a list of archived project files available for the both the Dump and Landfill. Hundreds of files were available for review dating back to the early 1960's. In addition, historic aerial imagery was obtained from Historic Information Gatherers (HIG). These aerials were used to evaluate historic disturbance limits and approximate operational dates for the landfill (Appendix A). The disturbance limits shown on the aerial photography were evaluated to identify historic dumping as well as current waste limits. An approximate chronology of significant milestones is provided below.

Freeway Dump

The Dump property was purchased by Richard McGowan and his business partner Jim Vallez sometime around 1960. Although it is not certain exactly when the dump became active and started receiving waste, some reports indicate that dumping began as early as 1960. A review of historical aerial photographs indicate that the Dump was active between 1960 and 1969 (Figure 2). The Dump initially accepted ash from a nearby power plant and later accepted other refuse including municipal solid waste and construction waste (MPCA, 2017). After the Dump ceased operating in 1969, the property remained unused until 1993, when the driving range operations began.

Previous investigations of the site have been conducted, starting with the 1987 Preliminary Assessment (PA) by the MPCA (MPCA, 1987). The PA was prompted by concerns from the U.S. Fish and Wildlife Service (USFWS), whose property abuts the Dump to the east. USFWS had observed stressed vegetation, erosion, and waste materials at the eastern edge of the landfill. MPCA identified dichlorodiphenyltrichloroethane (DDT) and PAHs in soil samples collected from the perimeter of the Dump and concluded there were exposure risks from the Dump, including the groundwater and surface water migration pathways. Following the Preliminary Assessment, the Dump was placed on the CERCLA inventory of potentially hazardous waste sites.

A subsequent investigation was conducted in the early 1990's as documented in the Screening Site Inspection Report (MPCA, 1992). The investigation included soil and groundwater testing. Organic compounds and metals contamination were detected in soil and groundwater, and additional investigation was recommended. An additional investigation was conducted in 1997/1998 by the MPCA. Nine monitoring wells were installed around the perimeter of the Dump. Groundwater sample results indicated the presence of arsenic, boron, manganese and low levels of VOCs and PCBs. In the fall of 2003, response actions including the grading and drainage improvements were completed as noted in a correspondence between the MPCA and McGowan (MPCA, 2004).

Freeway Landfill

The Landfill property comprised multiple parcels that were purchased from several different owners sometime in 1968 by Richard McGowan. Prior to the Landfill operating, the area was mostly wetland and undeveloped, with the exception of farming activities visible in the 1937 aerial photo and a few small structures that were located north of the frontage road on the south bank of the Minnesota River, visible in the 1966 aerial photo.

The Landfill began accepting waste in July of 1969 under a conditional use permit issued by the City of Burnsville. In October of 1971, the MPCA issued the Landfill a permit (No. SW 57). From a review of historical aerial photos (Figure 3), it appears that Landfill operations began in the northeast corner of the property and then expanded to the south. In the late 1970s and 1980s, environmental regulations were significantly updated in response to evolving knowledge about environmental contaminants and associated risks to human health and the environmental. Landfill regulations were updated to require engineered liners and caps for new landfills. Based on concerns at the Site, the Landfill was added to the Superfund National Priorities List in 1986 (MPCA, 2015). Under the new regulations, landfill owners

were requested to either make necessary upgrades to their facilities or to stop accepting waste. In 1990, Freeway Landfill stopped accepting waste. It is estimated that approximately 5 million cubic yards of waste were deposited in the 131 acre area of the Landfill.

Previous investigations have been conducted at the Landfill, including remedial investigations conducted on behalf of the Landfill owner (CRA, 1988 and Liesch, 1991) and environmental assessments conducted on behalf of the MPCA. More recently, in 2005, a subsurface investigation was conducted on behalf of the MPCA throughout the Landfill site that included nearly 70 soil borings and detailed surveying to assess the topography and subsurface conditions (FES, 2005).

Freeway Transfer Station

The Transfer Station was constructed sometime in the late 1980s and operates on a 12 acre parcel bounded by the Freeway Landfill to the north, south, and west. The Transfer Station is currently in operation and has been since 1991 (Liesch, 1993).

3.0 Site Investigation

Site investigation activities were conducted to further characterize the site geology and hydrogeology and to evaluate the extent and magnitude of waste material and its potential impacts to soil and groundwater. The investigation results improve the understanding of site risks and will inform the evaluation of potential site remedies.

The tasks completed were outlined in the work plan dated October 26, 2017 (Barr, 2017). With the exception of the downhole geophysical survey, all planned tasks for Phase A were completed and are described below.

3.1 Pre-Investigation Activities

Site Access

The investigation was originally scheduled to begin in late 2017; however the work was delayed until an access agreement was completed at the end of December 2017. Access was not fully granted until March 2018.

Barr and the MPCA visited the Site on February 15, 2018 to plan investigation logistics. On March 5, 2018 Barr and the MPCA revisited the Transfer Station to assess boring locations and determine how to avoid interfering with the facility's operations.

Utilities

Underground utilities were marked by both a public and private locate prior to any intrusive activities. The utility locates were coordinated by the drilling and excavation contractors (Range Environmental Drilling and Bolander, respectively).

Property Boundary Survey

Identifying the extent of waste material was a major objective of the investigation at the Dump, therefore the planned location of most test excavations was near the property boundary at the Dump. The property boundary near these investigation locations was marked in the field by a licensed surveyor. The MPCA coordinated with the Minnesota Department of Natural Resources (MNDNR) to complete this task.

3.2 Summary of Investigation Activities

Investigation activities at the Site occurred during the spring of 2018.

- March 20 to March 27, 2018 – twenty-eight soil borings were completed at the Dump.
- April 11 and April 12, 2018 – seven soil borings were completed at the Dump.
- April 12 and April 13, 2018 – eight soil borings were completed at the Transfer Station.
- April 11 to April 18, 2018 – fourteen test excavations were completed at the Dump.
- April 18 and April 20, 2018 – nine test excavations were completed at the Landfill.

3.2.1 Soil borings

Borings at the Dump and the Transfer Station were advanced with a direct-push, tracked drill rig, and soil samples were collected with a dual-tube sampler. Soil borings were generally advanced to the top of bedrock. Soil borings were advanced at continuous vertical intervals from all locations. These samples were described in the field by Barr in accordance with the Unified Soil Classification System. Samples were screened in the field for volatile organic vapors using an MPCA-provided photoionization detector (PID) fitted with a 10.6 eV lamp. Additionally, the samples were inspected by Barr for other evidence of contamination such as staining, odors, discoloration, and/or sheen, and the observations were documented on the geologic log of each boring. Borings were sealed in accordance with Minnesota Department of Health rules. Boring logs are provided in [Appendix B](#). There were no major deviations from the planned work. Soil borings completed at the Site are described below:

Dump – 35 soil borings were completed at the Dump. The Dump soil borings were generally spaced over an approximate 180-foot by 180-foot grid. Locations of the soil borings at the Dump are shown on [Figure 4](#). A discussion of the results of these soil borings is presented in [Section 4.1](#).

Transfer Station – Eight soil borings were completed at the Transfer Station. The purpose of the borings at the Transfer Station was to assess the subsurface material directly under and adjacent to the operations building. For this purpose, two of the borings were completed within the building footprint and the remaining six borings were located surrounding the building. Locations of the soil borings at the Transfer Station are shown on [Figure 5](#). A discussion of the results of these soil borings is presented in [Section 4.2](#).

Soil Gas Screening

Soil gas was measured by Barr at each boring location, using an MPCA-provided multi-gas meter capable of measuring methane, carbon dioxide, and oxygen. Upon completion of a soil boring, soil gas was screened from a depth of approximately three feet below ground surface (bgs). A tube was fitted to the multi-gas meter and lowered down the hole. The hole around the tube was then backfilled, the meter allowed to equilibrate, and the readings was logged. Soil gas screening results are discussed in [Section 4.1](#) and [Section 4.3](#).

3.2.2 Test Excavations

Test excavations were completed at several locations at both the Dump and Landfill. The purpose of the majority of test excavations was to identify the edge of the waste boundary or to determine if waste appeared to extend beyond the property boundaries. Therefore, most of these test excavations were completed just inside the property boundary. In addition to identifying the extent of waste, the added benefit of exposing larger areas of the subsurface was to further classify the types of waste material present. Test excavations completed at the Site are described below:

Dump – Fourteen test excavations were completed at the Dump. Ten of the test excavations were completed along the property boundaries and four excavations were completed in the interior of

the dump. The interior borings were completed adjacent to previously completed boring locations to better classify the waste material overserved during the soil boring investigation. Locations of the test excavations are shown on [Figure 4](#) and field logs are presented in [Appendix C](#). A discussion of the results of the test excavations is presented in [Section 4.1](#). There were no major deviations from the planned work.

Landfill – Nine test excavations were completed at the Landfill. Eight of the test excavations were completed along the northeast property boundary and one was completed at the southeast corner of the property. Locations of the test excavations are shown on [Figure 5](#) and field logs are presented in [Appendix C](#). A discussion of the results of the test excavations is presented in [Section 4.2](#). There were two deviations from the planned work due to site conditions encountered:

- Only one test excavation was completed in the southeast corner of the property. Although two excavations were planned, the ground in that area was either under water at the time of the field work, or deemed too soft for the excavator to safely traverse due to snow melt.
- The test excavations along the north edge of the property were set back approximately 50-100 feet from the property boundary due to the presence of trees and utilities. One additional excavation (FL-TT-02a) was completed closer to the property boundary.

Test excavations were completed with a back-hoe in 1 to 2 foot lifts to depths of up to 15 feet bgs or to groundwater, whichever was encountered first. As the excavation proceeded, the operator segregated the soil and/or waste material by depth so that upon completion the leftover soil and/or waste material could be replaced back in the excavation in the order and approximate position from which it was removed. As the soil was replaced the excavator bucket was used to tamp in approximate one-foot lifts to re-compact the soil.

3.2.3 Sample Collection

Soil, waste, and groundwater samples from borings and test pits were collected from the investigation locations for laboratory analysis by a field representative of the MPCA laboratory contractor, Pace Analytical (Pace). A summary of the sample parameter lists are provided in [Table 1](#) and [Table 2](#). Samples were analyzed at Pace laboratories for all of the parameters listed, with the exception of a select group of groundwater sample parameters that were analyzed at Minnesota Department of Health's (MDH) laboratory. Laboratories were selected by MPCA from a list of state-contract laboratories or other state agency laboratories. A summary of samples collected is provided in [Table 3](#).

Upon receipt of the laboratory analytical data, Barr performed a data quality review. A summary of the data quality review is included in [Appendix F](#). Based on the review, some results were flagged as estimated values. A majority of the hexavalent chromium results in water samples did not meet the QA/QC criteria and were rejected. Otherwise, the review concluded that all data met the data quality objectives of the project and are deemed acceptable for the purposes of this project, as qualified in the tables. Results are discussed in [Section 4.0](#).

Solid Media

For solid media samples, Barr and MPCA collaborated to inform the Pace representative at what intervals samples would be collected. One sample of solid media was collected from nearly all of the soil boring and test excavation locations. Solid media at the Site is characterized as waste material (including ash and municipal solid waste/construction debris), fill, or native sediments (see [Section 4.1](#)). A majority of the samples were collected from the waste material, but other media were also sampled as summarized below:

Project Area	Number of Solid Media Samples Collected by Material Type			
	MSW/ Construction Debris	Ash	Fill	Native
Freeway Dump	36	7	1	4
Freeway Landfill	6	0	0	2
Freeway Transfer Station	6	0	2	0

Groundwater

Groundwater samples were collected from the borings using 1" PVC screen and riser. New screens and risers were used at each sample location. A peristaltic pump was used to recover the sample from the temporary wells. Purging was not conducted prior to sample collection due to the limited volume and recharge observe. Samples were generally turbid due to this lack of purging. If water was encountered in a test excavation, a sample was collected using surface water sampling techniques, which generally included filling a laboratory-cleaned container by lowering it into the water that had infiltrated the excavation. The sample was then transferred into the appropriate laboratory-provided sample container.

The full parameter list for groundwater samples is extensive and during the planning phase of the investigation it was assumed that water would be available at a majority of the locations. Therefore, the original plan was to collect groundwater samples from only half of the investigation locations and that samples would be collected for a group of prioritized parameters at each of these locations while samples would be collected for the remaining parameters at either half or one quarter of the locations. However, as the investigation proceeded, it was observed that groundwater was often not present above the bedrock (i.e., the base of the borings) and therefore groundwater samples could not be collected at many locations. Another issue arose at some locations where groundwater was present but there was insufficient recharge in the temporary well to allow for the collection of the full list of parameters in a timely manner (i.e., approximately 8 liters of sample volume is necessary for the full analytical list). Due to these issues, it was decided that the full list of parameters would be sampled for at any location that could provide the necessary volume, and a partial list would be sampled for at locations with limited recharge. A summary of groundwater samples collected is provided below:

Project Area	Location Type	Total Number of Locations	Number of Samples Collected	
			Full List	Partial List
Freeway Dump	Boring	35	3	7
Freeway Dump	Excavation	14	2	0
Freeway Landfill	Excavation	9	5	1
Freeway Transfer Station	Boring	8	1	3

3.2.4 Surveying

Final locations of all soil borings and test excavations were surveyed using a hand-held global positioning system (GPS) device. Elevations were approximated based off of existing topographic (LIDAR; [Fugro and MDNR, 2011](#)) information.

3.3 Site Restoration

Following investigation activities, MPCA coordinated with state contractors to perform restoration activities at the Dump. Restoration activities included minor grading to repair ruts and placement of seed mixes. Restoration activities at the Landfill included repair of minor asphalt damage near the entrance to the U.S. Salt facility.

4.0 Investigation Results

This section describes the results of the investigation conducted in the spring of 2018 (Phase A). Included in this discussion of results is the description of the different solid media encountered and their distribution across the Site. Additionally, solid media and water quality results are presented in comparison to relevant health-based risk criteria.

4.1 Solid Media Characterization

Unconsolidated materials (including waste material, fill, and native sediments) were described in the field by Barr. Materials were described using methods included in ASTM D-2488, Standard Practice for Description and Identification of Soils. General descriptions of the primary unconsolidated materials encountered at the Site are provided below.

4.1.1 Non-Native Material

4.1.1.1 Fill

Fill material used as cover soil was observed at all investigation locations. This fill material generally consisted of a few inches of root zone material (topsoil with a fine sandy loam texture) underlain by sand to silty sand with varying percentages of coarse-grained sediment. Fill material was also observed directly below the operations building at the Transfer Station.

4.1.1.2 Waste Material

For the purposes of this investigation, waste material was divided into two classifications: (1) municipal solid waste/construction debris (MSW/CD) and (2) ash, as described in the following paragraphs.

MSW/CD stockpile at FD-TT-01

Ash sidewall at FD-TT-03

Municipal Solid Waste/Construction Debris

MSW/CD was encountered across most of the site. Municipal solid waste consisted of paper, plastics, glass, wood, metal, and rubber and was sometimes mixed with fill material. Construction debris varied,

typically including bricks, concrete, wood, shingles, and insulation. The level of decomposition varied as well, with some areas appearing relatively dry and containing readable lines of newspaper, whereas other pockets of waste material were well degraded and had a noticeable odor of decomposition.

Ash

Ash was observed only at investigation locations at the Dump. Ash is generally described as gray, or black, non-plastic, silt to fine grained sand-size material and was differentiated from native sediments by strength and texture comparisons. The ash encountered at the Dump was mostly fine-grained and non-cemented, making it appear as a possible native gray silt except that it often was intermixed with waste material. The ash was generally observed either above and/or below the waste material.

4.1.2 Native Sediments

Native sediments encountered during the investigation included alluvial or glacial sediment deposits. In general, native sediments were encountered below the waste material. The most commonly observed native sediment was a dark brown fibrous peat, but lean to fat clays, organic clays, silts, and sandy soils were also present in some locations.

4.2 Freeway Dump

The subsurface conditions at Dump are based on the soil borings and test excavations that were completed as shown on [Figure 4](#). Boring logs and test excavation field logs are provided in [Appendix B](#) and [Appendix C](#), respectively, and the observations are summarized below:

4.2.1 Subsurface Conditions

Subsurface conditions at the Freeway Dump generally consist of non-native fill material overlaying waste material (MSW/CD and ash), which overlay native sediments and/or bedrock. Cross section locations are displayed on [Figure 6](#), and four cross sections of the Dump are included as [Figure 6A](#), [Figure 6B](#), [Figure 6C](#), and [Figure 6D](#).

4.2.1.1 Non-Native Material

Fill

Fill soil was encountered at all thirty-five soil borings and fourteen test excavations at the Dump. The fill soil cover thickness over the waste ranged from 0.5 to 12.5 feet, but generally was observed to be between two to five feet thick. The greatest thicknesses of fill soil were encountered along the west side of the Dump property, where several borings were positioned on top of landscaped berms.

Field screening of the fill soil did not identify evidence of contamination such as staining, odors, discoloration, and/or sheen. Soil headspace readings ranged between 0.0 and 6.9 parts per million (ppm).

Waste Material

Waste material encountered at the Dump consisted of a combination of MSW/CD and ash.

MSW/CD was encountered at 34 (of 35) soil borings and 11 (of 14) test excavations at the Dump. The top of the MSW/CD was generally observed below the fill soil layer and in some locations, below a layer of ash. MSW/CD was observed at varying thicknesses throughout the Dump, but was generally between 10 and 20 feet thick. The greatest thickness of MSW/CD observed was approximately 30 feet at FD-SB-A3 in the north-central portion of the Dump. The thinnest intervals of MSW/CD were identified at the westernmost borings (FD-SB-A1 through FD-SB-G1), where thicknesses averaged less than 2.5 feet. MSW/CD was sometimes observed intermixed with fill soil or ash. In general, this mixing occurred where the material layers contact.

Test excavations were completed around the perimeter of the Dump to determine the extent of the waste material. MSW/CD were not observed in any of the three test excavations along the west parcel boundary of the Dump. It appears that MSW/CD extends beyond the north, south, and east parcel boundaries, where it was observed in test excavations at thicknesses of up to 8 feet.

Field screening results varied greatly throughout the MSW/CD in the Dump. Decomposition, chemical-like, and/or petroleum odors were observed in varying degrees in the MSW/CD. Sheens were also encountered, ranging from trace to heavy rainbow sheen. PID soil headspace readings were generally elevated (above 10 ppm), and ranged from 0.0 to 343 ppm. Headspace readings above 100 ppm were observed at seven borings and two test excavations, all of which were generally located in the eastern portion of the Dump. Maximum headspace readings from investigation locations are displayed on [Figure 7](#). Field screening results are presented in the boring logs and test excavation field logs included as [Appendices B and C](#).

Ash was identified in 25 (of 35) borings and 13 (of 14) test excavations at the Dump. Ash was observed both above and below the MSW/CD, and its thickness ranged between 0 and 13 feet. In general, ash is more commonly observed above the MSW/CD on the east half of the property and below the MSW/CD on the west half of the property. Ash was occasionally encountered mixed with a minor amount of debris/plastic sheeting.

Field screening in the ash did not identify evidence of contamination such as staining, discoloration, odor, and/ or sheen. PID headspace readings ranged between 0.0 to 4.5 ppm.

4.2.1.2 Native Sediments / Bedrock

Native soil was identified beneath the waste and above bedrock in 22 (of 35) borings completed at the Dump. Native soil generally consists of alluvial deposits of peat overlaying a thin layer of organic silt/fat clay. Peat was present in 21 of the 22 soil borings at the Dump where native soil was observed above bedrock. Organic silt and/ or clay was present beneath the peat in 11 out of the 22 borings. Peat thickness ranged from 1 to 10 feet, but generally, peat layers were observed to be between two and five feet thick. The silts and clays underlying the peat were generally no thicker than one foot.

Poorly graded sand and clayey sand is present beneath the waste material at two boring locations in the northeast portion of the Dump (FD-SB-B5 and FD-SB-C5). Native sand was not observed in any of the other borings or test excavations completed at the Dump during this investigation.

Waste material was observed in direct contact with bedrock at 13 (of 35) boring locations. The uppermost bedrock beneath the Dump Site is a sandy dolostone of the Prairie du Chien Group. The depth to bedrock encountered during the investigation varied from 14 to 40 feet bgs. Bedrock was encountered at higher elevation (approximately 716 feet above MSL) in the southern portion of the site, and generally slopes downward to the north edge of the property (approximately 684 feet above MSL) towards the Minnesota River.

4.2.1.3 Groundwater

Water was observed at 2 (of 14) test excavations and in the temporary wells of 18 (of 35) soil borings and was most commonly observed on the eastern portion of the site ([Figure 4](#)). Although water was present at 18 of the temporary wells, the water level was just above the bottom of the screen and there was insufficient recharge to collect any sample at 8 of those 18 locations. Water samples were collected from the remaining 10 temporary wells and the 2 test excavations.

Groundwater observations generally align with previous investigations that describe the unconfined water table at the Dump as existing above and below the interface of the unconsolidated material and bedrock ([MPCA, 1992](#)). The variability of measurable groundwater observed during this investigation is likely due to low permeability soils that restrict the recharge of water to the temporary wells. For these reasons, true groundwater elevations and flow directions could not be ascertained during this investigation.

4.2.1.4 Soil Gas

Measurements made with the multi-gas meter indicated methane concentrations ranged from 0.0% to 36.9% across the Dump site. Carbon dioxide concentrations ranged from 0.0% to 28.6% and oxygen concentrations ranged from 0.0% to 21.6%. As would be expected, the concentrations of methane and carbon dioxide generally had an inverse relationship compared with the concentration of oxygen. Landfill gas concentrations are shown on [Figure 7](#) and in [Table 4](#).

4.2.2 Analytical Results

Analytical results for samples collected at the Dump are presented in [Appendix D](#) and laboratory reports are included in [Appendix E](#). Key analytical results are summarized in the subsequent sections.

Solid media were compared to the MPCA's soil reference values (SRVs) and soil leaching values (SLVs). The SRVs are conservative, risk-based criteria that are dependent on land use scenarios. Concentrations from solid media samples collected from the Dump were compared to both Recreational and Industrial SRVs. The SLVs provide a conservative estimate of the potential for contaminants detected in soil to leach to the groundwater. A summary of concentrations in soil samples at the Dump that exceeded the above mentioned values is provided as [Table 5](#).

For the purpose of results discussion in the subsequent sections, diesel range organics (DRO) and gasoline range organics (GRO) concentrations were compared to the criteria (100 mg/kg) included in the MPCA's Best Management Practice for Off-Site Reuse of Unregulated Fill (Unregulated Fill: MPCA, 2012). The applicability of these criteria have yet be determined and will depend on future land use decisions.

Concentrations detected in water samples were compared to drinking water (EPA maximum contaminant levels and MDH health-based guidance) and surface water (Class 2B) criteria. A summary of concentrations in water samples at the Dump that exceeded the above mentioned criteria is provided as [Table 6](#).

Background Concentrations of Select Metals

Previous investigations of the surrounding area have concluded that the background concentrations of arsenic, iron, manganese, and vanadium often exceed SRVs and SLVs. Therefore the range of background concentrations will be taken into account when discussing exceedances in the following sections. A comparison of criteria to background concentrations is provided in the following table:

Parameter	Criteria (mg/kg)			Dakota County Background Range*			
	SLV	Industrial SRV	Recreational SRV	Soil (0.2 – 0.5 m)		Soil Parent Material (1 – 2 m)	
Arsenic	5.8	20	11	7	12	12	17
Iron	NA	75,000	12,000	17,000	30,000	34,000	90,000
Manganese	130	8,100	5,000	498	1,284	NA	NA
Vanadium	4	250	40	72	93	93	115

*Data range from summary maps: OFR09-02, Minnesota Soil, Till, and Ground-Water Geochemical Data. Lively, R.S.; Thorleifson, L.Harvey (Minnesota Geological Survey, 2009) <http://conservancy.umn.edu/handle/11299/117364>

4.2.2.1 Non-Native Material

Fill

One sample of fill soil was collected from location FD-SB-G1 in the southwest corner of the Dump. Arsenic was detected above the recreational SRV and the SLV at this location and manganese and vanadium were detected above the SLV, however these metals were detected below or within their background range as discussed in [Section 4.1.2](#). DRO was detected at a concentration of 68.1 mg/kg, which is below the MPCA's Best Management Practice for Off-Site Reuse of Unregulated Fill (Unregulated Fill: [MPCA, 2012](#)).

Ash

Seven samples of ash were collected for chemical analysis from the Dump. Samples were collected from ash encountered both below and above the MSW/CD, as well as in some locations where MSW/CD were not present.

Parameter	Samples Analyzed	Number of Sample Locations with Exceedances		
		MPCA Tier 2 Recreational SRV	MPCA Tier 2 Industrial SRV	MPCA Screening SLV
Metals	7	7	5	7
B(a)P equivalent	7	1	1	1
Pentachlorophenol (SVOC)	7	0	0	1

Concentrations of vanadium were detected above the recreational SRV at all locations and above industrial SRVs at one sample location. Concentrations of vanadium were detected above background concentrations in five of the seven samples. Industrial SRVs as well as background concentrations were exceeded for arsenic in five of the seven samples. Manganese concentrations were detected above SLVs at all locations, but were below or within the background range at all locations. Iron concentrations were detected above recreational SRV at all locations, but were also below or within the background range at all locations. DRO was detected at a concentration of 33.7 mg/kg in one sample.

MSW and Construction Debris

Thirty-six samples of MSW/CD were collected for chemical analysis from the Dump. Samples were collected from locations where field screening results showed evidence of contamination. A summary of the constituents that exceeded SRVs or SLVs is provided below:

Parameter	Samples Analyzed	Number of Sample Locations with SRV Exceedances		
		MPCA Tier 2 Recreational SRV	MPCA Tier 2 Industrial SRV	MPCA Screening SLV
Metals	36	34	11	36
VOCs	36	2	1	18
PCBs	36	18	7	30
B(a)P equivalent	36	12	10	15
SVOCs	36	1	1	13

Metal constituents that exceeded SRV criteria most frequently were iron (36 locations, 4 above background), arsenic (27 locations, 9 above background), vanadium (24 locations, 5 above background), mercury (15 locations), lead (14 locations), and copper (11 locations). Antimony exceeded SRV criteria at two locations. Barium, cadmium, nickel, and zinc exceeded SRV criteria at only one location each. Manganese concentrations were detected above SLVs at all locations, but were below or within the background range at all but two locations.

DRO was detected at all 36 samples locations with concentrations ranging from 23.3 mg/kg to 6,590 mg/kg, with 13 locations exceeding 1,000 mg/kg. GRO was detected at 21 locations with concentrations ranging from 14.6 mg/kg to 854 mg/kg, with 9 locations exceeding 100 mg/kg. Although DRO and GRO do not have an SRV, elevated GRO/DRO concentrations typically indicate the presence of petroleum impacts.

4.2.2.2 Native Sediments

Four samples of native sediments were collected for chemical analysis from the Dump.

Parameter	Samples Analyzed	Number of Sample Locations with Exceedances		
		MPCA Tier 2 Recreational SRV	MPCA Tier 2 Industrial SRV	MPCA Screening SLV
Metals	4	2	0	4
B(a)P equivalent	4	1	0	1
Benzene	4	0	0	3
Bis(2-ethylhexyl)phthalate	4	0	0	1
PCBs	4	0	0	1

Arsenic, iron, manganese, and vanadium were detected above SLVs or SRVs at all locations, but reported the concentrations were below or within their background ranges as discussed in [Section 4.1.2](#). Boron was detected above SLVs at all locations. Lead was detected above the recreational SRV at one location ([Table 5](#)). DRO concentrations were detected at three locations ranging from 71.0 mg/kg to 409 mg/kg.

4.2.2.3 Groundwater

Twelve groundwater samples were collected for chemical analysis from soil borings and test excavations at the Freeway Dump. Five samples were analyzed for a full list of parameters, and seven were analyzed for a partial list, as noted in [Table 3](#). A summary of samples that exceeded criteria is provided in the table below:

Parameter	Samples Analyzed	Number of Sample Locations with Exceedances			
		EPA Maximum Contaminant Levels	MDH Human Health-Based Water Guidance	MN Surface Water 2Bd (Chronic)	MN Surface Water 2Bd (Acute)
Metals	10	2	10	7	3
VOCs	12	6	9	7	0
1,4 Dioxane	11	NA	10	NA	NA
PFOA	11	NA	10	NA	NA
PFOS	11	NA	9	NA	NA
Chlorine Dioxide	5	3	NA	NA	NA
Nitrogen, ammonia, as N	10	NA	NA	10	NA
Cyanide	10	0	NA	9	1
Gross Beta (radiation)	6	4	NA	NA	NA

NA – not applicable, no criteria available

Metal detections above criteria were widespread, but the specific metals were generally sporadic, with the exception of the test excavation samples, though this is likely due to the high concentration of sediments in the samples ([Table 6](#)). Boron was the metal most commonly detected above drinking water standards, and exceeded standards at ten sample locations. Manganese was detected above drinking water standards at nine sample locations. As noted in [Section 3.2.3](#), the hexavalent chromium results did not meet QA/QC criteria and were deemed unusable.

Benzene was detected above drinking water standards at seven sample locations and was detected above surface water standards at a total of six sample locations. Vinyl chloride was detected above drinking water standards at four sample locations and was detected above surface water standards at three sample locations. Other than benzene and vinyl chloride, VOCs did not exceed drinking water standards from samples collected at any location at the Dump, except for FD-SB-B3 where nine VOCs were detected above drinking water standards and six VOCs were detected above surface water standards.

4.3 Freeway Landfill

Nine test excavations were completed at the Landfill to verify the subsurface conditions at the north and southeast property boundaries. Test excavation field logs are provided in [Appendix C](#). Investigation locations are shown on [Figure 5](#), and observations are summarized below:

4.3.1 Subsurface Conditions

The test excavation investigation conducted at the Landfill identified fill soil and waste material as well as native silt, sand, and clay. A description of each type of material encountered is provided in the following subsections.

4.3.1.1 Non-Native Material

Fill

Fill soil covering the waste materials ranged from one to five feet thick, with an average thickness of two feet. The fill soil typically included a top soil cover. Gray silty sand fill was identified below the cover soil at the three western-most excavations (FL-TT-01, FL-TT-02, and FL-TT-02a). The gray silty sand fill was one foot thick at all three locations and was mixed with small amounts of concrete, bricks, glass, plastic, and wood.

Field screening in the fill material did not identify evidence of contamination such as staining, odors, discoloration, and/or sheen. PID soil headspace readings ranged between 0.1 and 5.4 ppm.

Waste Material

Waste material encountered at the Freeway Landfill consisted of a combination of MSW/CD and was generally consistent with that observed at the Dump, with the exception that no ash was encountered. Waste material was encountered in seven of the nine borings completed at the Landfill. The top of the waste material was observed below fill soil between one and five feet bgs. Waste material was observed to be between six and twelve feet thick, with an average thickness of 8.5 feet. Waste material was not encountered in FL-TT-06 and FL-TT-07 in the northeast portion of the Landfill site.

Decomposition, chemical, and petroleum odors were observed throughout the waste material. Sheens were also encountered, ranging from trace to heavy rainbow. PID headspace readings in the waste material were generally below 10 ppm, with the exception of FL-TT-02 (20.5 ppm, 2-10 feet bgs) and FL-T-05 (29.2 ppm, 5-15 feet bgs). Maximum headspace readings from investigation locations are displayed on [Figure 8](#). Field screening results are presented in the test excavation field logs included as [Appendix C](#).

4.3.1.2 Native Sediments

Native sediment beneath the waste material at the Landfill consisted of gray silt with sand to silty sand. The top of this layer was present between 10 and 15 feet bgs at 5 out of the 9 excavations. Several of the excavations were terminated within the waste material and therefore the presence of underlying native sediments could not be assessed. No field screening impacts were observed in this layer, and PID headspace readings were below 1.1 ppm.

Alluvial deposits of silty sand, clayey sand, silt, and clay were identified at the two locations in the northeast portion of the site where no waste material was encountered (FL-TT-06 and FL-TT-07). No field screening impacts were observed at these locations, and PID headspace readings were below 0.5 ppm.

4.3.1.3 Groundwater

Measurable groundwater was observed in six of the eight test excavations completed at the Landfill (Figure 5). Depth to groundwater was measured from the ground surface of the excavation to the surface of the standing water at the base of the excavation. Groundwater depths are variable across the site, and were observed between 5 and 11 feet bgs. The variability of measurable groundwater observed during this investigation is likely due to low permeability soils that restrict the recharge of water within the test excavations

4.3.2 Analytical Results

Analytical results for samples collected at the Landfill are presented as a table in Appendix D and laboratory reports are included in Appendix E. Key analytical results are summarized in the subsequent sections.

Results from solid media and groundwater samples were compared to criteria as described in Section 4.1.2. A summary of concentrations in soil samples from the Landfill that exceeded the above mentioned criteria is provided as Table 7. A summary of concentrations in groundwater samples at the Landfill that exceeded the above mentioned criteria is provided as Table 8.

4.3.2.1 Waste Material

Waste samples were collected for chemical analysis from six test excavation locations at the Freeway Landfill. A summary of the constituents that exceeded SRVs and SLVs is provided below:

Parameter	Samples Analyzed	Number of Sample Locations with Exceedances		
		MPCA Tier 2 Recreational SRV	MPCA Tier 2 Industrial SRV	MPCA Screening SLV
Metals	6	5	2	6
B(a)P equivalent	6	1	1	1
Butyl benzyl phthalate	6	1	1	1
1,4-Dichlorobenzene	6	0	0	4
Benzene	6	0	0	1
Tetrachloroethylene	6	0	0	1
PCBs	6	2	1	4

Manganese and vanadium were detected above SLVs or SRVs at all locations, but their concentrations were below background ranges as discussed in [Section 4.1.2](#). Arsenic was detected above industrial SRVs and its background range at one location. Iron was detected above industrial SRVs and its background range at two sample locations. Cadmium was detected above recreational SRVs at one location. Copper was detected above recreational SRVs at four sample locations. Lead was detected above recreational SRVs at two sample locations.

DRO was detected at all six sample locations with concentrations ranging from 171 mg/kg to 3,370 mg/kg, with samples from two locations exceeding 1,000 mg/kg. GRO was detected in samples from two locations at concentrations of 40.2 mg/kg and 74.1 mg/kg ([Appendix D](#)). Although DRO and GRO do not have an SRV they can be indicators of petroleum impacts.

4.3.2.2 Native Sediments

Two samples of native soil were collected from the Landfill test excavations (FL-TT-06 and FL-TT-07).

Parameter	Samples Analyzed	Number of Sample Locations with Exceedances		
		MPCA Tier 2 Recreational SRV	MPCA Tier 2 Industrial SRV	MPCA Screening SLV
Metals	2	1	0	2

Arsenic, iron, manganese, and vanadium were detected above SLVs or SRVs at both locations, but their concentrations were below or within their background ranges as discussed in [Section 4.1.2](#).

4.3.3 Groundwater

Six groundwater samples were collected for chemical analysis from test excavations at the landfill. Five samples were analyzed for a full list of parameters, and one was analyzed for a partial list, as indicated in [Table 3](#). A summary of samples that exceeded criteria is provided in the table below:

Parameter	Samples Analyzed	Number of Sample Locations with Exceedances			
		EPA Maximum Contaminant Levels	MDH Human Health-Based Water Guidance	MN Surface Water 2Bd (Chronic)	MN Surface Water 2Bd (Acute)
Metals	6	0	6	5	2
PFOA	6	NA	6	NA	NA
PFOS	6	NA	5	NA	NA
Benzene	6	0	1	0	0
1,4 Dioxane	6	NA	1	NA	NA
Chlorine Dioxide	5	3	NA	NA	NA
Nitrogen, ammonia, as N	6	NA	NA	6	NA
Cyanide	6	0	NA	2	0
Bis(2-ethylhexyl)phthalate	6	0	0	2	NA

NA – not applicable, no exceedance criteria available

Metal detections above criteria were generally sporadic, with the exception of the test excavation samples, though this is likely due to the high concentration of sediments in the samples. Aluminum, boron, and manganese were the metal constituents detected above drinking water standards at one or more test excavations. Aluminum, arsenic, cobalt, lead, and zinc were the metal constituents detected above surface water standards at one or more test excavations.

4.4 Freeway Transfer Station

Eight soil borings were completed at the Transfer Station to assess the subsurface conditions beneath and adjacent to the operations building. All eight soil borings were advanced to the top of bedrock. Soil samples were screened in the field using methods described in [Section 3.2.1](#). Investigation locations are shown on [Figure 5](#), and observations are summarized below:

4.4.1 Subsurface Materials

Subsurface materials at the Transfer Station generally consist of non-native fill material overlaying waste material, which overlay native sediments and/or bedrock. Waste material was not present at the two borings completed within the operations building (SB-TS-02 and SB-TS-07). Cross section locations are displayed on [Figure 6](#). Two geologic cross sections of the Transfer Station site are presented as [Figure 6E](#) and [Figure 6F](#).

4.4.1.1 Non-Native Material

Fill material

Cover soil at boring locations not completed within the operations building ranged from 2.5 to 7 feet thick. At soil borings completed within the operations building (SB-TS-02 and SB-TS-07), fill material was observed from below the building floor slab to bedrock at approximately 25 feet bgs ([Figure 6E](#)).

Trace sheen and moderate odor were observed in borings TS-SB-02 and TS-SB-05. No field screening impacts were identified in the fill material at any other boring locations at the Transfer Station.

Waste Material

Waste material consisting of MSW/CD was encountered beneath the surficial fill at all six borings completed outside of the operations building at the Transfer Station. The top of the waste material was identified between 2.5 and 7 feet bgs and extended to depths of up to 28 feet bgs. Waste material was observed to be between 6.4 and 25 feet thick, with an average thickness of 11 feet. The greatest waste thickness was observed at boring SB-TS-08 where the ground surface is approximately 14 feet higher than the rest of the soil borings.

Light to strong decomposition odors were identified throughout the waste material. Strong petroleum odor and moderate sheen were identified in the waste material at TS-SB-01. PID headspace readings in the waste material were generally elevated, and ranged from 0.5 to 36.7 ppm.

4.4.1.2 Native Sediments / Bedrock

Native soil was observed above the bedrock at 4 out of 8 borings completed at the Transfer Station. The primary native soil observed above bedrock at the Transfer Station was an alluvial deposit of high-plasticity organic clay, which was present at all 4 of the soil borings where native soil was observed. A thin layer of peat was observed above the organic clay at one soil boring location (TS-SB-01), and silty sand was present at one boring beneath the organic clay and above the bedrock (FD-SB-05). Waste material was observed in direct contact with bedrock at TS-SB-04 and TS-SB-08.

The uppermost bedrock beneath the Transfer Station is a sandy dolostone of the Prairie du Chien Group. The depth to bedrock encountered at the Transfer Station during the investigation varied from 16 to 28 feet bgs, and bedrock elevations vary from approximately 686 feet above MSL to 698 feet MSL.

4.4.1.3 Groundwater

Groundwater level data were collected from the temporary monitoring wells after groundwater stabilized and before groundwater sampling began. Measurable groundwater was observed in four of the eight soil borings at the Transfer Station (Figure 5). Groundwater elevations are variable across the site, and range from approximately 706 feet MSL to 690 feet MSL.

The variability of measurable groundwater observed during this investigation is likely due to low permeability soils that restrict the recharge of water within the temporary wells. Further, groundwater that was encountered during the investigation may be perched on top of bedrock or within the low permeability waste materials.

4.4.1.4 Soil Gas

Measurements made with the multi-gas meter indicated methane concentrations ranged from 0.0% to 65.6% across the Transfer Station. Carbon dioxide concentrations ranged from 0.0% to 35.9% and oxygen concentrations ranged from 0.9% to 21.6%. As observed at the Dump, and as would be expected, the

concentration of methane and carbon dioxide appeared to have an inverse relationship with the concentration of oxygen. Landfill gas concentrations are shown on [Figure 8](#) and in [Table 4](#).

4.4.2 Analytical Results

Analytical results for the Transfer Station are presented as a table in [Appendix D](#) and laboratory reports are included in [Appendix E](#). Results from solid media and water samples were compared to criteria as described in [Section 4.1.2](#). A summary of concentrations in soil samples at the Transfer Station that exceeded the above mentioned criteria is provided as [Table 7](#). A summary of concentrations in water samples at the Transfer Station that exceeded the above mentioned criteria is provided as [Table 8](#).

4.4.2.1 Non-Native Material

Fill material

Two samples of fill soil were collected from under the operations building at the Freeway Transfer Station.

Parameter	Samples Analyzed	Number of Sample Locations with Exceedances		
		MPCA Tier 2 Recreational SRV	MPCA Tier 2 Industrial SRV	MPCA Screening SLV
Metals	2	0	0	2

Manganese and vanadium were detected above SLVs at both locations, but the concentrations were below or within their background ranges as discussed in [Section 4.1.2](#). DRO was detected at location TS-SB-02 at a concentration of 12.4 mg/kg.

Waste material

Samples of waste material were collected from six locations at the Transfer Station. A summary of the constituents that exceeded the SRVs and SLVs provided below:

Parameter	Samples Analyzed	Number of Sample Locations with Exceedances		
		MPCA Tier 2 Recreational SRV	MPCA Tier 2 Industrial SRV	MPCA Screening SLV
Metals	6	3	0	5
B(a)P equivalent	6	2	1	3
Bis(2-ethylhexyl)phthalate	6	0	0	1
1,1,2,2-Tetrachloroethane	6	0	0	1
Benzene	6	0	0	1
1,4-Dichlorobenzene	6	0	0	1
Naphthalene	6	0	0	1
PCBs	6	0	0	1

Manganese and vanadium were detected above SLVs or SRVs at all locations, but the reported concentrations were below or within their background ranges as discussed in [Section 4.1.2](#). Iron was detected above the recreational SRV but below or within its background range at two locations. Arsenic

was detected above the recreational SRV but below or within its background range at one location. Lead was detected above its recreational SRV two locations and copper was detected above its recreational SRV one location. DRO was detected at all six locations at concentrations ranging from 371 mg/kg to 3,820 mg/kg. GRO was detected at locations TS-SB-01, TS-SB-05, and TS-SB-08 at concentrations of 53.6 mg/kg, 38.9 mg/kg, and 47.7 mg.kg, respectively.

4.4.2.2 Water

Four groundwater samples were collected for chemical analysis from the eight soil borings completed at the Transfer Station. One sample was analyzed for the full list of parameters, and three were analyzed for a partial list of parameters (Table 3). A summary of samples that exceeded health based criteria is provided in the table below:

Parameter	Samples Analyzed	Number of Sample Locations with Exceedances			
		EPA Maximum Contaminant Levels	MDH Human Health-Based Water Guidance	MN Surface Water 2Bd (Chronic)	MN Surface Water 2Bd (Acute)
Metals	4	2	4	4	2
PFOA	4	NA	4	NA	NA
PFOS	4	NA	4	NA	NA
Benzene	4	0	1	0	0
1,4 Dioxane	4	NA	4	NA	NA
3,4-Methylphenol	4	NA	1	NA	NA
Nitrogen, ammonia, as N	4	NA	NA	1	NA
Cyanide	4	0	NA	1	0
Chloride	4	NA	NA	1	0

NA – not applicable, no exceedance criteria available

Twelve metal constituents were detected above surface water standards at one or more soil boring location. All twelve of these metal constituents were observed above surface water standards at TS-SB-07, seven were detected above surface water standards at TS-SB-05, four were detected above surface water standards in TS-SB-08, and one was detected above surface water standards in TS-SB-02 (arsenic).

Thirteen metal constituents were detected above drinking water standards at one or more soil boring location. All thirteen constituents were detected above drinking water standards at TS-SB-07, six were detected above drinking water standards at TS-SB-05, and two were detected above drinking water standards at TS-SB-02 and TS-SB-08.

5.0 Site Conceptual Model

This section summarizes the features of the Site including waste extent, geology and hydrogeology, and an initial assessment of the potential receptors that are at risk from the deposited waste material.

5.1 Waste Extent

The approximate extent of waste is depicted on Figures 9 and 10. The following paragraphs detail the information that was utilized in making the determinations. As noted below, the extent of waste has not been fully delineated.

Freeway Dump

The extent of waste material at the Dump appears to extend beyond the property boundaries in all directions. Test excavations were completed along the edges of the property during the most recent investigation, however, waste material and/or ash were encountered at each of these locations extending to the property line.

Along the north and east edges of the property, the presence of waste material beyond the property boundary was anticipated as the elevated ground surface of the Dump above the adjacent wetland can be observed. The elevated ground surface extends approximately 100 feet north of the property boundary. There are three monitoring wells (installed during the 1997 MPCA investigation) located just to the north of the toe of the slope. Boring logs from these wells indicate no waste present, therefore the northern extent of the waste can be assumed to be located somewhere between the toe of the slope and these wells. Along the east edge of the elevated Dump surface, the slope is more gradual and where it contacts the wetland less easily identified. At one test excavation (FD-TT-06), completed along the east edge of the property near what appeared to be the bottom of the slope, waste material was observed extending below the groundwater elevation. Additionally, the boring log for OFMW-1, located farther to the east, indicate ash was encountered in the boring.

Neighboring the property to the south and southeast is a storage unit facility. Test excavations along the south property boundary encountered waste material. Additionally, the boring log from monitoring well MW97-6, located just south of the property boundary indicated the presence of waste material. A review of historical aerial photographs also give some insight into the extent of waste material in this area. Photographs from 1966 and 1967 indicate that operations were occurring as far south as where the storage facility is now located. The area to the southeast of the property corner also appears disturbed in the 1969 photograph. In addition, a representative of the storage facility mentioned that they had encountered waste material during previous construction activities. It can be assumed that the waste material and possibly ash extend beyond the Dump property boundary to the south and southeast.

Interstate 35W is located west of the Dump property. Three test excavations were placed along the west edge of the property and although no MSW/CD was present, ash was observed at all three locations. The Minnesota Department of Transportation (MnDOT) conducted a Phase II investigation in 2014 ([MnDOT, 2015](#)) and a supplemental investigation in 2018 ([MnDOT, 2018](#)) along the right-of-way corridor adjacent to the property. The logs from borings conducted between the Dump and the Interstate indicated the

presence of a greyish silt with fine-grained sand, which is similar to the description of the ash encountered during this investigation. Additionally, historical aerial photographs from 1964 and 1967 indicate that operations were occurring close to the edge of the highway. Although MSW/CD do not seem to extend beyond the Dump property boundary, it is assumed that ash may extend into the right-of-way of Interstate 35W.

Freeway Landfill

An assumed waste footprint was presented in the Investigation & Sampling Plan (MPCA, 2017) based on data from previous investigations. Along the west edge of the Landfill, the 2005 soil boring investigation delineated the extent of waste material with a transect of borings (No. 1 – 8) where no waste was observed. Along the south edge of the Landfill, the extent of waste material is defined by the bottom of the slope running along the property boundary. The extent of waste is also defined by the bottom of the slope along the east edge of the Landfill. This is supported in historical aerial imagery, where there does not appear to be disturbance beyond landfill slopes as they exist today.

During the 2018 investigation, test excavations were conducted along the north edge of the Landfill and in the southeast corner to gain a better understanding of the extent of waste in these areas (Figure 10). In the southeast corner, waste material was observed in FL-TT-08, which was located on the slope due to soft ground conditions beyond the toe of the slope. No waste material was identified in borings WT-7 or DP-8, located beyond the toe of the slope. Historical aerial photos do not show any disturbance in this corner of the Landfill, with the exception of an access road in the 1990s. It is likely that the waste material extends no further than the bottom of the slope, but the exact location of the extent has yet to be identified.

Along the north edge of the property, waste material was observed in test excavations FL-TT-01 to FL-TT-05. Historical aerial photos show ground disturbance in the area of the US Salt property. During utility locate activities for the 2018 investigation, personnel from US Salt mentioned waste material had been encountered during past construction activities. Extent of waste material is not known, but likely extends north of the Landfill property boundary. There is also debris visible on the southern bank of the Minnesota River, but it has not been determined if this is related to the waste in the Landfill or a separate placement of debris to stabilize the river bank.

Waste material was not observed at locations FL-TT-06 and FL-TT-07. These test excavations were completed beyond the slope of the elevated landfill (Figure 10). Historical aerial photos also do not show evidence of ground disturbance beyond the toe of the slope as is located currently. This also is additional confirmation that the extent of waste material along the east edge of the landfill is likely defined by the base of the slope.

Freeway Transfer Station

No waste material was observed at locations TS-SB-02 and TS-SB-07, which were completed inside the operations building. Waste material was observed at every other boring location surrounding the operations building that was completed during the 2018 investigation. Therefore, it appears likely that

waste material extends throughout the Transfer Station area, with the exception of directly under the buildings and, possibly, the weighing stations.

5.2 Geology

Subsurface conditions at the Dump, Landfill, and Transfer Station generally consist of a thin layer of top soil overlaying non-native fill material overlaying waste, overlaying native sediments and/or bedrock. A description of these layers and detailed investigation observations are included in [Section 4.0](#).

5.2.1 Freeway Dump

Waste material at the Dump, which includes MSW/CD and ash, was observed to be between 10 and 30 feet thick. The waste material was identified to contain concentrations of various constituents that exceed criteria as discussed in [Section 4.0](#). Fill materials at the Dump were observed on top of waste material. The waste material overlays native sediment and/or bedrock. Bedrock generally slopes downward to the north edge of the property towards the Minnesota River. Available information indicates no liner is present under the waste material.

Previous investigations describe the unconfined water table at the Dump as existing above and below the interface of the unconsolidated material and bedrock ([MPCA, 1992](#)). In some areas the groundwater is in contact with waste material. Groundwater samples collected during the 2018 investigation exhibited concentrations of various constituents that exceed drinking water and surface criteria as discussed in [Section 4.0](#).

5.2.2 Freeway Landfill

Waste material encountered at the Landfill consisted of MSW/CD, with a slightly higher percentage of construction debris compared to the Dump and Transfer Station. Waste material encountered during this investigation had an average thickness of 8.5 feet. Data from a 2005 investigation indicate that waste material was commonly observed between 15 and 25 feet thick in the center portion of the landfill, and was observed to be as much as 49 feet thick ([FES, 2005](#)). Fill materials were observed on top of waste material. The waste material overlays native sediment and/or bedrock. The uppermost bedrock beneath the Landfill is a sandy dolostone of the Prairie du Chien Group. The bedrock elevation is generally higher in the south, and slopes to the north towards the Minnesota River.

Similar to the Dump, concentrations of various constituents in soil, waste material, and groundwater samples collected at the Landfill exceeded criteria as discussed in [Section 4.0](#).

5.2.3 Freeway Transfer Station

Waste material at the Transfer Station consisted of MSW/CD and was present beneath cover fill soil at all locations with the exception of borings completed within the operations building, where fill material was observed from the ground surface to bedrock at approximately 25 feet bgs ([Figure 6E](#)). At boring locations outside of the building the waste material overlays native sediment and/or bedrock and was observed to be between 6 and 25 feet thick.

Similar to the Dump and Landfill, concentrations of various constituents in soil, waste material, and groundwater samples collected at the Transfer Station exceeded criteria as discussed in Section 4.0.

5.3 Hydrogeology

The Site is located in close proximity to the Minnesota River channel. The Minnesota River is a regional groundwater discharge zone. Wetlands are adjacent to the north and east sides of the Dump. The Black Dog Preserve Calcareous Fen is to the east of the Dump. The water table in the vicinity of the Site is generally present in unconsolidated materials above the bedrock or in the uppermost bedrock. The waste in the dump is in contact with the bedrock and water table in some areas.

The uppermost bedrock beneath the site is the Prairie du Chien Group. Immediately below the Prairie du Chien is the Jordan Sandstone. The Prairie du Chien and Jordan are hydraulically interconnected and are the two most utilized and productive aquifers in the Twin Cities metropolitan area. Under natural conditions, groundwater in the Prairie du Chien and Jordan would discharge to the Minnesota River.

The Kraemer Mining and Materials quarry is located approximately 1,000 feet west of the Dump and immediately south and southwest of the Landfill. The resource being mined in the quarry is the Prairie du Chien. Dewatering in the quarry likely captures groundwater in the Prairie du Chien beneath the site, depressing the water table from what it would be under natural conditions.

Neither the Dump nor the Landfill operated as lined facilities. Waste is directly in contact with groundwater in portions of the Dump site. Except for near the edges, waste is generally not in contact with groundwater at the Landfill, but models predict that condition will change when Kraemer Quarry operations end and the pumping is eliminated (Barr, 2015). Water was encountered within the waste materials on the Transfer Station property.

5.4 Potential Receptors

The presence of waste in unlined facilities has the potential for negative impacts on human health and the environment. The following paragraphs provide a preliminary summary of some of the receptors and pathways that may be affected by the presence of the waste materials, both under current and expected future scenarios.

Direct Contact Receptors

Freeway Dump currently operates as a recreational facility (golf driving range). On the south end is a gravel parking lot. The majority of the land surface is vegetated by grass. Along the east, north and west edges the vegetation includes scrubs and the south edge is wooded. Cover soil is present over the waste material, but was observed in some locations at thicknesses of less than one foot. A metal chain link fence runs along Interstate 35W and between the Dump and the storage facilities to the south. The site is accessible to pedestrian and vehicular traffic.

Freeway Landfill is similarly vegetated with grasses over the majority of the land surface and the edges of the property having scrubs or wooded vegetative cover. The Landfill is no longer operational, however

the Transfer Station is operational and access roads through the Landfill are utilized as well as lay-down areas in the northern portion of the Landfill. Cover soil is present over the waste material and was observed at thickness of 2 feet or greater. The site is also accessible to pedestrian and vehicular traffic.

Drinking Water Supply

The City of Burnsville utilizes a surface water feature within the Kraemer Quarry as a drinking water supply. The City also operates water supply wells that are open to the Jordan Sandstone and are located approximately one-third mile to the southeast of the Dump. Based on past investigations and modeling, the current flow of groundwater beneath the Dump is generally towards Kraemer Quarry. However, when pumping at the quarry stops, the City's pumping wells could draw groundwater from the Dump to the south in the direction of Burnsville's drinking water supply wells (MPCA, 1992).

Surface Water Receptors

Freeway Dump is bounded both to the north and east by a wetland which lies between the Dump and the Minnesota River. The Minnesota River is directly north of the Landfill. An intermittent water course that flows to the river runs along the east side of the Landfill. A majority of the Dump is elevated above the 100-year flood plain of the Minnesota River. The same is true of the Landfill with the exception of the northern area where test excavations were conducted during the 2018 investigation. When Kraemer Quarry stops pumping, the resulting lake may be an additional potential surface water receptor.

Vapor Receptors

Elevated methane concentrations were detected throughout all portions of the Site. Any current buildings, including the Transfer Station and the driving range office, may be exposed to methane or other landfill gases. Similarly, future buildings located near the Dump or Landfill may be potentially be exposed to elevated concentrations of landfill gases.

6.0 Data Gaps and Recommendations

The Phase A investigation detailed in this report was intended to be the first of two phases of investigation, with a Phase B to be scoped based on the results of Phase A. A summary of data gaps that may be investigated as part of a future Phase B investigation is provided in this section.

6.1 Waste Extent

As noted in section 5, the lateral extent of waste has not been defined in all directions. The most notable data gaps with respect to waste extent include the following:

- The northern boundary of the Landfill, where the northernmost test trenches encountered waste and anecdotal evidence from the adjacent property owner suggested waste extended onto the U.S. Salt property
- The southern boundary of the Dump, where the southernmost test trenches encountered waste and anecdotal evidence from the adjacent property owner suggested waste extended onto the storage building property

The waste extent in other directions is also currently undefined; however, interpretation of previous investigations and reasonable assumptions based on topography result in a less significant data gap.

It is recommended that additional test excavations and/or soil borings be completed to determine the extent of waste.

6.2 Groundwater Quality

A limited groundwater investigation was completed at the Dump. A monitoring well network that allowed for adequate spacing and routine sampling would allow for a better understanding of the groundwater quality in the vicinity of the Dump. A more robust monitoring well network exists at the Landfill; however there may be opportunities to augment the monitoring well network to allow for a better understanding of groundwater quality in the vicinity of the Landfill.

Downhole geophysical logging of the existing monitoring well network was planned during the Phase A scope to gather additional hydrogeological data for the site. This work has not been completed and MPCA is continuing to work with the USGS or MGS to conduct that work in the future.

It is recommended that the downhole geophysical logging that was intended to be completed as part of Phase A be included in the Phase B scope. It is also recommended that additional monitoring wells be installed to better characterize the groundwater quality in the vicinity of the Dump and the Landfill.

6.3 Soil Cover Quality

Limited data has been collected on the quality of soil overlying waste materials. Its suitability as either a cover soil over current waste or its suitability for reuse is a data gap.

It is recommended that soil samples be collected as part of the Phase B investigation to evaluate the quality of the soil cover.

Data Footnotes and Qualifiers

Barr Standard Footnotes and Qualifiers

--	Sample analyzed; result does not exceed criteria for this parameter
*	Estimated value, QA/QC criteria not met.

MPCA Screening Soil Leaching Values

CR6	Value represents the criteria for Chromium, hexavalent.
M	Value represents the criteria for mixed Xylenes.
MC	Mercury as Mercuric Chloride.
MP	Value represents the criteria for p-cresol.
T	Value represents a criteria for the total carcinogenic PAHs as BaP.

MPCA Tier 2 Industrial Soil Reference Values

CR6	Value represents the criteria for Chromium, hexavalent.
M	Value represents the criteria for mixed Xylenes.
MP	Value represents the criteria for p-cresol.
T	Value represents a criteria for the total carcinogenic PAHs as BaP.

MPCA Tier 2 Recreational Soil Reference Values

CR6	Value represents the criteria for Chromium, hexavalent.
M	Value represents the criteria for mixed Xylenes.
MC	Mercury as Mercuric Chloride.
MP	Value represents the criteria for p-cresol.
T	Value represents a criteria for the total carcinogenic PAHs as BaP.

Data Footnotes and Qualifiers

Barr Standard Footnotes and Qualifiers

--	Sample analyzed; result does not exceed the criteria for this parameter
FR	Sample Type: Field Replicate
N	Sample Type: Normal
NA	NA (not applicable) indicates that a fractional portion of the sample is not part of the analytical testing or field collection procedures.
*	Estimated value, QA/QC criteria not met.
**	Unusable value, QA/QC criteria not met.
h	EPA recommended sample preservation, extraction or analysis holding time was exceeded.
ns	Sample not analyzed for this parameter.

EPA Maximum Contaminant Levels

TT(2)	When Acrylamide is used in drinking water systems, the combination (or product) of dose and monomer level shall not exceed that equivalent to a polyacrylamide polymer containing 0.05% monomer dosed at 1 mg/l.
TT(12)	Copper action level 1.3 mg/l; lead action level 0.015 mg/l.
(9)	Under review.
(11)	1998 Final Rule for Disinfectants and Disinfection By-products: MRDLG=Maximum Residual Disinfection Level Goal; and MRDL=Maximum Residual Disinfection Level.
(14)	Based on the criteria for chromium, total.
(15)	Based on the criteria for xylenes, total.
(16)	At no time can turbidity go above 5 NTU.
(+)	This MCL is no longer an official regulatory level, but is still in use as a trigger for EPA. The actual MCL for Beta is 4 mrem/year but there is no simple conversion between a curie and a rem.

MDH Human Health-Based Water Guidance Table

(1)	Value is representative of the lowest exposure duration published in the Minnesota Department of Health Human Health Advisory Table.
CR	Value represents the criteria for Chromium, hexavalent.
HBV16	Health Based Value 2016.
HBV17	Health Based Value 2017.
HRL09	Health Risk Limit 2009.
HRL11	Health Risk Limit 2011.
HRL13	Health Risk Limit 2013.
HRL15	Health Risk Limit 2015.
HRL93	Health Risk Limit 1993.
HRL94	Health Risk Limit 1994.
RAA17	Risk Assessment Advice 2008.
XYL	Value shown is for the sum of the mixed o,m and p Xylene isomers.

Minnesota Surface Water 2Bd Chronic 7050 - 360 Hardness*

(3)	Value represents the criteria for Ammonia, unionized as N.
(5)	Value based on the criteria for cyanide, free.
CF	Conversion Factor.
CR6	Value represents the criteria for Hexavalent Chromium.
HD	Hardness Dependent.

* Estimated concentrations based on same underlying assumptions of conservative transport mechanisms and same source area. Minnesota River hardness data from MPCA, 2006. Working Draft, Surface Water Pathway Evaluation user's Guide, Appendix E.

Minnesota Surface Water 2Bd Final Acute Value 7050 - 360 Hardness*

(1)	Subpart 7, item E applies.
(5)	Value based on the criteria for cyanide, free.
CF	Conversion Factor.
CR6	Value represents the criteria for Hexavalent Chromium.
HD	Hardness Dependent.

* Estimated concentrations based on same underlying assumptions of conservative transport mechanisms and same source area. Minnesota River hardness data from MPCA, 2006. Working Draft, Surface Water Pathway Evaluation user's Guide, Appendix E.

Data Footnotes and Qualifiers

Barr Standard Footnotes and Qualifiers

--	Sample analyzed; result does not exceed the criteria for this parameter
N	Sample Type: Normal
*	Estimated value, QA/QC criteria not met.
h	EPA recommended sample preservation, extraction or analysis holding time was exceeded.
ns	Sample not analyzed for this parameter.

EPA Maximum Contaminant Levels

(11)	1998 Final Rule for Disinfectants and Disinfection By-products: MRDLG=Maximum Residual Disinfection Level Goal; and MRDL=Maximum Residual Disinfection Level.
TT(12)	Copper action level 1.3 mg/l; lead action level 0.015 mg/l.
(16)	At no time can turbidity go above 5 NTU.
(+)	This MCL is no longer an official regulatory level, but is still in use as a trigger for EPA. The actual MCL for Beta is 4 mrem/year but there is no simple conversion between a curie and a rem.

MDH Human Health-Based Water Guidance Table

(1)	Value is representative of the lowest exposure duration published in the Minnesota Department of Health Human Health Advisory Table.
CR	Value represents the criteria for Chromium, hexavalent.
HBV17	Health Based Value 2017.
HRL09	Health Risk Limit 2009.
HRL13	Health Risk Limit 2013.
HRL15	Health Risk Limit 2015.
HRL94	Health Risk Limit 1994.
MP	Laboratory reports 3-methylphenol and 4-methylphenol as co-eluting compounds. The criteria in the table represents 4-methylphenol which is the more stringent criteria.
RAA17	Risk Assessment Advice 2008.

Minnesota Surface Water 2Bd Chronic 7050 - 360 Hardness*

(3)	Value represents the criteria for Ammonia, unionized as N.
(5)	Value based on the criteria for cyanide, free.
CF	Conversion Factor.
CR6	Value represents the criteria for Hexavalent Chromium.
HD	Hardness Dependent.

* Estimated concentrations based on same underlying assumptions of conservative transport mechanisms and same source area. Minnesota River hardness data from MPCA, 2006. Working Draft, Surface Water Pathway Evaluation user's Guide, Appendix E.

Minnesota Surface Water 2Bd Final Acute Value 7050 - 360 Hardness*

(1)	Subpart 7, item E applies.
(5)	Value based on the criteria for cyanide, free.
CF	Conversion Factor.
CR6	Value represents the criteria for Hexavalent Chromium.
HD	Hardness Dependent.

* Estimated concentrations based on same underlying assumptions of conservative transport mechanisms and same source area. Minnesota River hardness data from MPCA, 2006. Working Draft, Surface Water Pathway Evaluation user's Guide, Appendix E.

FIGURE 8

No waste material was identified in the boring logs for these wells. Extent of waste is likely between the toe of the slope and the wells.

Waste material observed at FD-TT-06. Possibly ash identified at in boring log of OFMW-1. Extent of the waste material is not known.

Ash observed at FD-TT-03, FD-TT-04, and FD-TT-05. Material described as a grey silt, likely ash, identified in the logs of MnDOT Phase II borings located between the Dump and highway. Historical aerial photos show ground disturbance in the area directly adjacent to the highway. Extent of the waste material is not known, but deposited ash likely extends to the east edge of the road surface.

Waste material observed at FD-TT-08. No waste material was identified in the boring logs of MW97-4 and MW97-5, but continuous sampling was not conducted. Historical aerial photos show possible ground disturbance in the area. Extent of the waste material is not known, but likely extends into the storage facility.

Waste material observed at FD-TT-09, FD-TT-10, and identified in the boring log of MW97-6. Historical aerial photos show ground disturbance in the area where the storage facility is now located. Anecdote from storage facility employee mentioned waste material encountered during past construction activities. Extent of the waste material is not known, but likely extends into the storage facility.

- 2 - Ash was observed at investigation locations within this area, but no MSW/CD was observed

WASTE EXTENT
 Freeway Dump
 Site Investigation Report
 Dakota County, Minnesota

FIGURE 9

Waste material was observed in test excavations completed along the north edge of the property (FL-TT-01 to FL-TT-05). Historic aerial photos show ground disturbance in the area of the US Salt property, and an anecdote from US Salt personnel mentioned waste material encountered during past construction activities. Extent of waste material is not known, but likely extends north of the Landfill property boundary. Additionally, shoreline debris has been observed at the Minnesota River bank. It is uncertain as to whether this material came from the Landfill or was placed as a measure of erosion control by another party.

Waste material was not observed at locations FL-TT-06 and FL-TT-07. These test excavations were completed beyond the slope of the elevated landfill. Historic aerial photos also do not show evidence of ground disturbance beyond the toe of the slope as is located currently. The extent of waste material along the east edge of the landfill is likely defined by the base of the slope.

Waste material observed at boring locations surrounding the operation building. No waste material was observed at locations TS-SB-02 and TS-SB-07, which were completed inside the building. It is likely that waste material extends throughout the Transfer Station area with the exception of directly under the buildings and possibly the weighing stations.

Waste material observed at test excavation FL-TT-08, located on the slope of the landfill. No waste material was identified in the boring logs of WT-7 or DP-8. Historic aerial photos do not show any disturbance in this corner of the property, with the exception of an access road in the 1990s. It is likely that waste material extends to the bottom of the slope, however the exact location of the waste extent has yet to be identified.

The extent of waste material along the south, west, and northwest edges of the Landfill shown here are based on MPCA September 2017 Investigaiton and Sampling Plan. This assumed waste footprint boundary was informed by previous investigations.

Boring Logs

Project: Freeway Dump and Transfer Station
 Project No.: 23191372
 Location: Burnsville, MN
 Coordinates: UTM 15 N:4959649.943m, E:477228.009m
 Datum: NAD 83; UTM Zone 15

Surface Elevation: 714.0 ft
 Drilling Method: Geoprobe
 Sampling Method: Dual-Tube
 Completion Depth: 14.0 ft

Depth, feet	Sample Type & Recovery	Sample No.	ENVIRONMENTAL DATA	U C C S	Graphic Log	LITHOLOGIC DESCRIPTION	Elevation, feet
0							
0		1	D/O/S: No/ None/ None PID:0.3 D/O/S: No/ None/ None D/O/S: No/ None/ None		SM WM ASH	(SM): SILTY SAND with GRAVEL; fine to coarse grained; brown; moist; homogeneous; fill. (WM): WASTE MATERIAL; gray; moist; with plastic, wood, glass, mixed with silty/ash matrix; [FILL]. (ASH): ASH; gray; moist to wet; with very fine grained sand, soft, homogeneous, nonplastic. At 7.5': wet.	710

M:\GINT\FREWAY LANDFILL_23191372.GPJ_BARR\LIBRARY.GLB_ENVIRO LOG_BARR TEMPLATE.GDT

Date Boring Started: 4/11/18
 Date Boring Completed: 4/11/18
 Logged By: ABW
 Drilling Contractor: Range Environmental Drilling
 Drill Rig: Geoprobe

Remarks:

PID = Headspace; D/O/S = Discoloration/Odor/Sheen; FID/MC = FID/Methane Corrected; G/S/F = Gravel/Sand/Fines
 Additional data may have been collected in the field which is not included on this log.

Project: Freeway Dump and Transfer Station
 Project No.: 23191372
 Location: Burnsville, MN
 Coordinates: UTM 15 N:4959645.42m, E:477280.64m
 Datum: NAD 83; UTM Zone 15

Surface Elevation: 724.0 ft
 Drilling Method: Geoprobe
 Sampling Method: Dual-Tube
 Completion Depth: 27.0 ft

Appendix C

Test Excavation Field Logs

TEST TRENCH FIELD SAMPLING AND SCREENING LOG

Client: Minnesota Pollution Control Agency
 Project Name: Freeway Landfill & Dump Investigation
 Number: 23 / 19 - 1372
 Location ID: FD-TF-01

Date: 04/11/18
 Time Started: 9:20
 Time Ended: 11:00

Sampler: ARP2 / Pucc
 Calibration Time: 8:50
 Background Headspace: 0.0 ppm

Sample ID	Depth (ft)	Odor/Sheen	Headspace Reading (ppm)	Description
A	0-3	N/N	0.2	Sandy silty clay
B	3-5	N/N	1.8	Silt/Ash w/ debris + sand
C	5-8	N/N	0.8	Ash w/ little debris
D	8-12	mild chem + trace	97.6	Waste material

PLAN VIEW SKETCH: identify scale and direction, excavation extents and depths, sample locations, structures, utilities..

General stratigraphy description / General notes

0-3: Cover soil - Sandy silty clay (10/46/50) w/ gravel, brown
 3-8: Silt/Ash - Gray, little debris throughout, w/fg sand from 3-5, ~~with~~ denser / darker color from 6-8.
 8-12: Waste Material - decomp. wood, metal wiring, plastic conduit, rubber tire, motor oil containers (empty, 1qt)
 Sample collected: FD-TF-01 (W, 10-12)

CROSS SECTION SKETCH: identify scale and direction, excavation extents and depths, sample locations.

TEST TRENCH FIELD SAMPLING AND SCREENING LOG

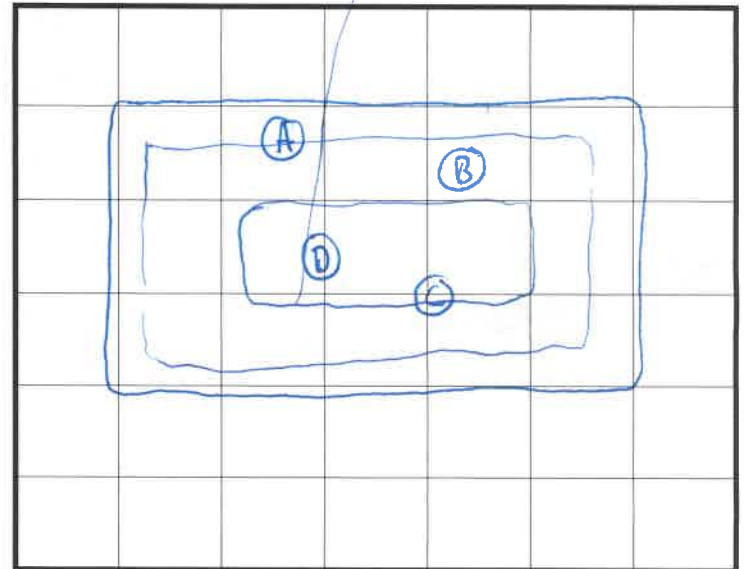

Client: Minnesota Pollution Control Agency
 Project Name: Freeway Landfill & Dump Investigation
 Number: 23 / 19 - 1372
 Location ID: FD-TT-02

Date: 04/11/18
 Time Started: 11:30
 Time Ended: _____

Sampler: ARP2 / Pace
 Calibration Time: 8:50
 Background Headspace: 0.0 ppm

Sample ID	Depth (ft)	Odor/Sheen	Headspace Reading (ppm)	Description
A	0-3	N/N	1.0	Topsoil / Waste mat.
B	3-6	N/N	0.3	Waste Mat. * collected from
C	6-9	N/N	0.8	Waste Mat / Silt/Ash
D	9-12	N/N	0.7	Silt/Ash

PLAN VIEW SKETCH: identify scale and direction, excavation extents and depths, sample locations, structures, utilities..

General stratigraphy description / General notes

0-1: Cover soil - sandy silty clay w/ gravel, brown
 1-7: Waste mat - MSW, tree trunks, building materials
 7-9: Waste mat mixed w/ silt/ash
 9-12: Gray silt/ash w/ some fly sand

Sample collected: FD-TT-02 (W, 7-9)

CROSS SECTION SKETCH: identify scale and direction, excavation extents and depths, sample locations..

TEST TRENCH FIELD SAMPLING AND SCREENING LOG

Client: Minnesota Pollution Control Agency
 Project Name: Freeway Landfill & Dump Investigation
 Number: 23 / 19 - 1372
 Location ID: FD-TF-03

Date: 04/11/14
 Time Stated: 14:05
 Time Ended: 15:10

Sampler: ARR2 / Pace
 Calibration Time: 8:50
 Background Headspace: 0.2 ppm

Sample ID	Depth (ft)	Odor/Sheen	Headspace Reading (ppm)	Description
A	0-2	N/N	0.4	Clayey Sand * collected from stockpile
B	2-5	N/N	0.4	Gray Silt
C	5-10	N/N	0.4	Peat

PLAN VIEW SKETCH: identify scale and direction, excavation extents and depths, sample locations, structures, utilities..

General stratigraphy description / General notes

0-2: Cover soil - Clayey sand w/ silt + gravel
 2-5: Silt, gray w/ some vfg sand
 5-10: Peat, very fibrous, black/brown

Sample collected FD-TF-03 (s, 2-5)

CROSS SECTION SKETCH: identify scale and direction, excavation extents and depths, sample locations..

TEST TRENCH FIELD SAMPLING AND SCREENING LOG

Client: Minnesota Pollution Control Agency
 Project Name: Freeway Landfill & Dump Investigation
 Number: 23 / 19 - 1372
 Location ID: FD-TT-04

Date: 04/11/18
 Time Started: 15:25
 Time Ended: 16:05

Sampler: ARP2
 Calibration Time: 8:56
 Background Headspace: 0.2 ppm

Sample ID	Depth (ft)	Odor/Sheen	Headspace Reading (ppm)	Description
A	0-2	N/N	0.4	Cover soil
B	2-5	N/N	0.3	Silt/Ash
C	6-10	N/N	0.2	Silt/Ash
D	10-12	N/N	0.3	Peat

PLAN VIEW SKETCH: identify scale and direction, excavation extents and depths, sample locations, structures, utilities..

General stratigraphy description / General notes

0-1.5: Cover soil, clayey sand w/ silt + gravel, brown
 1.5-10: Silt/Ash, gray, random plastic sheeting observed from ~6-10, harder, partially solidified, very small white flecks observed ~~from~~ ^{during} sheen test
 10-12: Peat, very fibrous, black/brown
 Bedrock encountered @ ~12' logs

No sample collected

CROSS SECTION SKETCH: identify scale and direction, excavation extents and depths, sample locations..

TEST TRENCH FIELD SAMPLING AND SCREENING LOG

Client: Minnesota Pollution Control Agency
 Project Name: Freeway Landfill & Dump Investigation
 Number: 23 / 19 - 1372
 Location ID: FD-TT-05

Date: 4/12/18
 Time Started: 8:50
 Time Ended: 9:45

Sampler: ARP2/Pace
 Calibration Time: 8:50
 Background Headspace: 0.1 ppm

Sample ID	Depth (ft)	Odor/Sheen	Headspace Reading (ppm)	Description
A	0-4	N/N	0.2	Cover soil
B	4-9	N/N	0.2	Silt/Ash
C	9-12	N/N	0.2	Peat / Weather BR

West face

} Collected from stratigraphies

PLAN VIEW SKETCH: identify scale and direction, excavation extents and depths, sample locations, structures, utilities..

General stratigraphy description / General notes

0-4: Cover soil - Clayey sand w/ silt + gravel, brown, shunks of asphalt observed (12"-18")

4-9: Silt/Ash - Gray, some rfy sand, white flecks observed from sheen test

9-10: Peat/organic clay, black, w/ some sand

10-11: Weathered bedrock

CROSS SECTION SKETCH: identify scale and direction, excavation extents and depths, sample locations.. West face

TEST TRENCH FIELD SAMPLING AND SCREENING LOG

Client: Minnesota Pollution Control Agency
 Project Name: Freeway Landfill & Dump Investigation
 Number: 23 / 19 - 1372
 Location ID: FD-TT-06

Date: 4-12-18
 Time Started: 10:45
 Time Ended: 13:30 - backfilled

Sampler: JWJ/Pace
 Calibration Time: 8:50
 Background Headspace: 0.3 ppm

Sample ID	Depth (ft)	Odor/Sheen	Headspace Reading (ppm)	Description
A	0- ^{1.5} _{1.5}	org/N	0.4	Black silty fill w/ roots and some wood debris. (OL/OH)
B	1.5- ^{3.5} _{3.5}	ash/silt/N	1.0	Ash/silt w/ debris + sand (Trash 2.5'-3.5')
C	@3'	None/N	0.5	Green colored soils in ^{silty} Ashy layer

PLAN VIEW SKETCH: identify scale and direction, excavation extents and depths, sample locations, structures, utilities..

General stratigraphy description / General notes

0'-1.5' = Black silty fill w/ some woody debris (45/15/80)
 1.5'-3.5' = Gray, little debris to 1.5'-2.5'. Trash from 2.5'-3.5' ^{glass bottles/ metal wood plastics}
 5' rusty coloration. grabbed green colored soils @ 3' ^{from NE corner} (C) on plan view
 water @ 3.5' light sheen noticed

CROSS SECTION SKETCH: identify scale and direction, excavation extents and depths, sample locations..

TEST TRENCH FIELD SAMPLING AND SCREENING LOG

Client: Minnesota Pollution Control Agency

Project Name: Freeway Landfill & Dump Investigation

Number: 23 / 19 - 1372

Location ID: FD-JT-07

Date: 4/12/18

Time Started: 11:30

Time Ended: 12:50

Sampler: ABW / Pace

Calibration Time: 8:58

Background Headspace: 0.3 ppm

Sample ID	Depth (ft)	Odor/Sheen	Headspace Reading (ppm)	Description
A	0-4	N/N	0.4	upper fill, ^{sample} grabbed from stockpile
B	4-6	N/N	0.5	silt/ash sample grabbed from #0
C	6-11	H / Trace	6.0	from stockpile,
D	11-12	N/N	0.8	bucket taken from base of exc.

PLAN VIEW SKETCH: identify scale and direction, excavation extents and depths, sample locations, structures, utilities..

General stratigraphy description / General notes

0-4 - V. Dr. brn silt^{sand}/clay, few med-cg gravel, (5/60/35) [cover]

4-6 - Gray silt/ash, trace debris throughout

6-11 - WASTE MATERIAL - mixed - no defined layers [pipe (metal) plastic, wood (abundant wood), tires, brick, ash, silt fence, bottles] ^H odor

11-12 - Gray silt/ash, no debris noticed

Sample collected - FD-JT-07 (WM, 6-11)

CROSS SECTION SKETCH: identify scale and direction, excavation extents and depths, sample locations..

TEST TRENCH FIELD SAMPLING AND SCREENING LOG

Client: Minnesota Pollution Control Agency

Project Name: Freeway Landfill & Dump Investigation

Number: 23 / 19 - 1372

Location ID: FD-TT-08

From E edge

Date: 4/12/18

Time Started: 13:45

Time Ended: 15:00

Sampler: ARP2 / Pucc

Calibration Time: 8:50

Background Headspace: 0.3 ppm

Sample ID	Depth (ft)	Odor/Sheen	Headspace Reading (ppm)	Description
A	0-2	N/N	0.6	Cover
B	2-5	N/N	0.5	Silt/Ash
C	5-12	Wild decomp. N	2.3	Waste

PLAN VIEW SKETCH: identify scale and direction, excavation extents and depths, sample locations, structures, utilities..

From E edge

General stratigraphy description / General notes

0-2: cover soil - silty sand w/ gravel, mg-cg, brown

2-5: silt/ash - Gray, w/ tiny white flecks

5-12: Waste material - MSW, steel container, tires, paper, plastic, metal wire

Sample collected: FD-TT-08 (W, 5-12)

CROSS SECTION SKETCH: identify scale and direction, excavation extents and depths, sample locations..

TEST TRENCH FIELD SAMPLING AND SCREENING LOG

* Soil Sample collected 4-12' bgs
(Waste Material)

* "Point" ggs location collected - could not walk
ground trench due to trees/slope
Sampler: ASW/PCC

Client: Minnesota Pollution Control Agency

Project Name: Freeway Landfill & Dump Investigation

Number: 23 / 19 - 1372

Location ID: FD-11-09

Date: 4/17/18

Time Started: 840

Time Ended: _____

Calibration Time: 815

Background Headspace: 0.1 - 0.3 ppm

Sample ID	Depth (ft)	Odor/Sheen	Headspace Reading (ppm)	Description
0	4	None	0.5	Silty Sand topsoil/Fill, brown, from stockpile
4	12	NONE	2.2	Debris/Waste Material (from stockpile)

PLAN VIEW SKETCH: identify scale and direction, excavation extents and depths, sample locations, structures, utilities..

General stratigraphy description / General notes

0-3' : Dk brown topsoil/SM [b/70/80] loose, homogenous, organics/roots, M-W

3-4 : dk gray SM (S.A.A) w/ few construction debris (concrete), same as above, less wet w/ debris, thinner to south of excavation, (lumped in w/ 0-3 for screening)

4-12: WASTE Material : Moist, dk gray to black. Tires, plastic, wood, metal, rubber hose, few large concrete pieces

CROSS SECTION SKETCH: identify scale and direction, excavation extents and depths, sample locations..

TEST TRENCH FIELD SAMPLING AND SCREENING LOG

* Water Sampled ABC List

* WASTE Sampled 2.5-10'

* "Point" gps collected due to slope/stability

Client: Minnesota Pollution Control Agency

Project Name: Freeway Landfill & Dump Investigation

Number: 23 / 19 - 1372

Location ID: FD-TT-10

Date: 4/17/18

Time Started: 1015

Time Ended: _____

Sampler: ABW/Paw

Calibration Time: 815

Background Headspace: 0.3 ppm

Sample ID	Depth (ft)	Odor/Sheen	Headspace Reading (ppm)	Description
1 0	2	NONE	3.0	SM Cover/FILL
2 2	2.5	NONE	0.4	ASH/ML -gray
3 2.5	10.5	Light/None	3.3	WASTE MATERIAL

PLAN VIEW SKETCH: identify scale and direction, excavation extents and depths, sample locations, structures, utilities..

General stratigraphy description / General notes

0-2: Dk brown SM fill/cover soil [*/70/30] organics, roots, M-W,
Partially frozen

2-2.5: very thin ML/Ash layer, soft, homogeneous, loose, ^{few} VF sands

2.5-10.5 WASTE MATERIAL: wood, bricks, bottles, rubber hose: tires,
Cinder blocks: construction material, wet @ 10' bgs

CROSS SECTION SKETCH: identify scale and direction, excavation extents and depths, sample locations..

* accessed on foot

* Sample collected 4-12' bgs

TEST TRENCH FIELD SAMPLING AND SCREENING LOG

Landfill gas: CH₄ | CO₂ | O₂ | Bal | LEL

CH ₄	CO ₂	O ₂	Bal	LEL

Client: Minnesota Pollution Control Agency

Project Name: Freeway Landfill & Dump Investigation

Number: 23 / 19 - 1372

Location ID: ~~FD-11-U~~ FD-11-U

Date: 4/17/18

Time Started: 1245

Time Ended:

Sampler: AB w/ Pinner

Calibration Time: 815

Background Headspace: 0.1 ppm

Sample ID	Depth (ft)	Odor/Sheen	Headspace Reading (ppm)	Description
0	2	None	0.2	Topsoil
2	4	None	0.18	Mixed Brown SM w/ McAsh : construction debris
4	12	Treated wood/light	21.9	WASTE MATERIAL

PLAN VIEW SKETCH: identify scale and direction, excavation extents and depths, sample locations, structures, utilities..

General stratigraphy description / General notes

0-2 : Dk gray topsoil : 0/20/30 SM, Organics, grass, lower soil, moist

2-4 : Mixed light brown SM w/ gray ash/silt : construction debris → wood, Bricks, concrete, moist

4-12 : WASTE material, moist, black silty sand matrix, heavy debris [wood, plastic, bottles, wire, rubber, newspapers, metal, Ash]

CROSS SECTION SKETCH: identify scale and direction, excavation extents and depths, sample locations..

* Waste sample collected 3-12' br

TEST TRENCH FIELD SAMPLING AND SCREENING LOG

Landfill	CH ₄	CO ₂	O ₂	B ₂	LEL

Data Footnotes and Qualifiers

Barr Standard Footnotes and Qualifiers

--	Not analyzed/Not available.
NA	NA (not applicable) indicates that a fractional portion of the sample is not part of the analytical testing or field collection procedures.
ND	Not detected.
TIC	Tentatively identified compound.
*	Estimated value, QA/QC criteria not met.
**	Unusable value, QA/QC criteria not met.
a	Estimated value, calculated using some or all values that are estimates.
l	Indeterminate value based on failure of blind duplicate data to meet quality assurance criteria

Data Footnotes and Qualifiers

Barr Standard Footnotes and Qualifiers

--	Not analyzed/Not available.
N	Sample Type: Normal
FD	Sample Type: Field Duplicate
NA	NA (not applicable) indicates that a fractional portion of the sample is not part of the analytical testing or field collection procedures.
TIC	Tentatively identified compound.
*	Estimated value, QA/QC criteria not met.
**	Unusable value, QA/QC criteria not met.
h	EPA recommended sample preservation, extraction or analysis holding time was exceeded.
j	Estimated detected value. The reported value is less than the stated laboratory quantitation limit but greater than the laboratory method detection limit.

Laboratory Analytical Reports

Protecting, maintaining and improving the health of all Minnesotans

Report Date: 5/16/18

Client Name: QU - MPCA - Closed Landfill Assessment 4

Project Code: QU

Project Name: Closed Landfill Assessment 4

Work Order Number: 18D1273

Report To: QU - MPCA - Closed Landfill Assessment 4

Benjamin Klismith

520 Lafayette Rd.

Saint Paul, MN 55155

The MDH Public Health Laboratory performs chemical, bacteriological and radiological analyses of environmental samples including water, waste water, sediment, air, soil and hazardous material. The laboratory provides testing services in accordance with standard operating procedures referencing approved methodology as defined in Standard Methods for the Examination of Water and Wastewater, Test Methods for Evaluating Solid Waste, Physical/Chemical Methods: EPA SW-846, and 40 Code of Federal Regulation (CFR) parts 136, 141, and 261. In cases where analytes of interest do not have corresponding EPA approved methodology, the MDH Public Health Laboratory uses in-house methods that have undergone rigorous validation and documentation.

The results within this report are in compliance with the terms and conditions stated in the standard operating procedures, reference methodologies, and quality assurance project plan; unless otherwise narrated in the attached report.

Release of the data contained in this report has been authorized by laboratory management and is verified with the following signature affirmation. Thank you for using the MDH Public Health Laboratory.

Sincerely,

A handwritten signature in black ink, appearing to read "Paul Moyer", is written over a light gray rectangular background.

Paul Moyer, Environmental Laboratory Manager
Public Health Laboratory, Minnesota Department of Health

Data Entry Worksheet

Parcel Information

Date & time of receipt: APR 24 '18 9:10

Courier: Walk-in FedEx Spee-Dee UPS USPS Other courier _____

Tracking # 7475 9832 2621

After hours drop-off: Refrigerator (207) (186) () Freezer (185) () Unrefrigerated

Parcel: Plastic cooler Styrofoam/cardboard cooler Cardboard box Envelope Plastic can
 None Other _____

Custody seals present: No; Yes, If "Yes" Custody seals intact: Yes; No _____

Custody seal # _____ Evidentiary samples identified: No Yes

Packaging, Temperature & Radiochemical Information

Packing material: Bubble wrap Styrofoam Paper None Other _____

Cooling material: Wet ice (loose) Wet ice pack #() Gel pack #() Dry ice None
 Other _____

Condition of cooling material: Solid Partially frozen Liquid; Liquid temperature: _____ °C N/A

Representative sample temperature: 5.4 °C IR thermometer instrument used: AS

Samples received with evidence of freezing: No; Yes _____

Rad Chem. request received: No; Yes, If "Yes" sample survey results: < 0.5 mrem/hr ≥ 0.5 mrem/hr

Initials of person receiving parcel:

Chain of Custody, Sample Container & Analysis Information

Chain of custody received with sample containers: Yes No

Chain of custody type: Standard Civil Criminal Priority/Emergency Unknown

All sample containers are unique to a sample point listed on the chain of custody: Yes; No

All sample containers have been collected prior to the expiration date listed on container label:
 Yes; No Unknown _____

All sample containers received intact: Yes; No _____

All sample containers are appropriate for requested analysis: Yes; No Unknown

All analysis have been received within the specified holding time for analysis: Yes; No Unknown

Sample submission details are entered in the Environmental Laboratory LIMS.
Initials of person logging in the work order request into LIMS:

Final Report
Quality Control

Data Qualifiers and Definitions

M1	Matrix spike and/or matrix spike duplicate recovery was high; the associated laboratory control sample and/or laboratory control sample duplicate recovery was acceptable.
J	Analyte was present between the method detection limit and reporting limit and should be considered an estimated value.
F4	The sample pH was greater than 2. Sample was analyzed within 14 days of sampling, but beyond the 7 days recommended for aromatics.
Dry	Sample results reported on a dry weight basis
RPD	Relative Percent Difference
%REC	Percent Recovery

Authorized by:

*The results in this report apply only to the samples analyzed.
This report must not be reproduced, except in full, without the written approval of the laboratory.*

RE: Project: 18-00383 MPCA Freeway LF Soils
Pace Project No.: 10424249

Dear Mr. Jacobson:

Enclosed are the analytical results for sample(s) received by the laboratory on March 20, 2018. The results relate only to the samples included in this report. Results reported herein conform to the most current, applicable TNI/NELAC standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Bob Michels

REPORT OF LABORATORY ANALYSIS

This report shall not be reproduced, except in full,
without the written consent of Pace Analytical Services, LLC.

ANALYTICAL RESULTS

Project: 18-00383 MPCA Freeway LF Soils

Pace Project No.: 10424249

Sample: FD-SB-A5(15-17) **Lab ID: 10424249001** Collected: 03/20/18 13:00 Received: 03/20/18 16:55 Matrix: Solid

Results reported on a "dry weight" basis and are adjusted for percent moisture, sample size and any dilutions.

REPORT OF LABORATORY ANALYSIS

This report shall not be reproduced, except in full,
without the written consent of Pace Analytical Services, LLC.

ANALYTICAL RESULTS

Project: 18-00383 MPCA Freeway LF Soils

Pace Project No.: 10424249

Sample: FD-SB-A5(15-17) **Lab ID: 10424249001** Collected: 03/20/18 13:00 Received: 03/20/18 16:55 Matrix: Solid

Results reported on a "dry weight" basis and are adjusted for percent moisture, sample size and any dilutions.

Parameters	Results	Units	Report Limit	DF	Prepared	Analyzed	CAS No.	Qual
7196 Chromium, Hexavalent Analytical Method: EPA 7196A Preparation Method: EPA 3060A

REPORT OF LABORATORY ANALYSIS

This report shall not be reproduced, except in full,
without the written consent of Pace Analytical Services, LLC.

ANALYTICAL RESULTS

Project: 18-00383 MPCA Freeway LF Soils

Pace Project No.: 10424249

Sample: **FD-SB-B5(11.5-23)** Lab ID: **10424249002** Collected: 03/20/18 15:10 Received: 03/20/18 16:55 Matrix: Solid

Results reported on a "dry weight" basis and are adjusted for percent moisture, sample size and any dilutions.

ANALYTICAL RESULTS

Project: 18-00383 MPCA Freeway LF Soils

Pace Project No.: 10424249

Sample: FD-SB-B5(11.5-23) **Lab ID: 10424249002** Collected: 03/20/18 15:10 Received: 03/20/18 16:55 Matrix: Solid

Results reported on a "dry weight" basis and are adjusted for percent moisture, sample size and any dilutions.

QUALIFIERS

Project: 18-00383 MPCA Freeway LF Soils

Pace Project No.: 10424249

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

TNTC - Too Numerous To Count

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

LABORATORIES

PASI-DUL Pace Analytical Services - Duluth

PASI-G Pace Analytical Services - Green Bay

PASI-I Pace Analytical Services - Indianapolis

PASI-M Pace Analytical Services - Minneapolis

PASI-V Pace Analytical Services - Virginia

BATCH QUALIFIERS

Batch: 529212

[M5] A matrix spike/matrix spike duplicate was not performed for this batch due to insufficient sample volume.

ANALYTE QUALIFIERS

1M RPD value is outside control limits due to sample non-homogeneity.

2M Redox (25 mv) and pH (7.84) values indicate a naturally reducing matrix. This accounts for poor recovery values on the sample per method Eh/pH phase diagram.

3M Sample was dark brown in color and grainy. Sample was centrifuged and decanted.

4M Sample was dark yellow in color.

5M The associated compound was outside of 20% for the associated continuing calibration but within 40% of the true value.

D3 Sample was diluted due to the presence of high levels of non-target analytes or other matrix interference.

D4 Sample was diluted due to the presence of high levels of target analytes.

E Analyte concentration exceeded the calibration range. The reported result is estimated.

REPORT OF LABORATORY ANALYSIS

This report shall not be reproduced, except in full,
without the written consent of Pace Analytical Services, LLC.

QUALIFIERS

Project: 18-00383 MPCA Freeway LF Soils

Pace Project No.: 10424249

ANALYTE QUALIFIERS

- L3 Analyte recovery in the laboratory control sample (LCS) exceeded QC limits. Analyte presence below reporting limits in associated samples.
- M0 Matrix spike recovery and/or matrix spike duplicate recovery was outside laboratory control limits.
- M1 Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.
- M3 Matrix spike recovery was outside laboratory control limits due to matrix interferences.
- M6 Matrix spike and Matrix spike duplicate recovery not evaluated against control limits due to sample dilution.
- N2 The lab does not hold NELAC/TNI accreditation for this parameter.
- N3 Accreditation is not offered by the relevant laboratory accrediting body for this parameter.
- P6 Matrix spike recovery was outside laboratory control limits due to a parent sample concentration notably higher than the spike level.
- R1 RPD value was outside control limits.
- S4 Surrogate recovery not evaluated against control limits due to sample dilution.
- T6 High boiling point hydrocarbons are present in the sample.

Report of Laboratory Analysis

This report should not be reproduced, except in full, without the written consent of Pace Analytical Services, Inc.

The results relate only to the samples included in this report.

Report Prepared Date:

April 2, 2018

DISCUSSION

This report presents the results from the analysis performed on one sample submitted by a representative of Pace Analytical Services, Inc. The sample was analyzed for the presence or absence of 2,3,7,8-tetrachlorodibenzo-p-dioxin (2,3,7,8-TCDD) using a modified version of USEPA Method 8290. The reporting limits were set to correspond to the lowest calibration points and a nominal 10-gram sample amount, and the sensitivity was verified by signal-to-noise measurements. The quantitation limits, adjusted for sample extraction amount, may be somewhat higher or lower than the reporting limits provided in this report. The sample was received above the recommended temperature range of 0-6 degrees Celsius.

The isotopically-labeled TCDD internal standard in the sample extract was recovered at 57%. Except for one low value, which was flagged "R" on the results table, the labeled standard recoveries obtained for this project were within the 40-135% target range specified in Method 8290. Also, since the quantification of the native TCDD was based on isotope dilution, the data were automatically corrected for recovery and accurate values were obtained.

A laboratory method blank was prepared and analyzed with the sample batch as part of our routine quality control procedures. The results show that 2,3,7,8-TCDD was not detected, indicating that the sample processing steps were free of background levels of this congener.

Laboratory and matrix spike samples were also prepared with the sample batch using clean reference matrix or sample matrix that had been fortified with native standard materials. The results show that the spiked native TCDD was recovered at 70-111% with a relative percent difference (RPD) of 25.3%. The RPD value obtained for the matrix spike analyses was above the 20% target upper limit. This deviation may be due to sample inhomogeneity.

Report of Laboratory Analysis

This report should not be reproduced, except in full, without the written consent of Pace Analytical Services, Inc.

The results relate only to the samples included in this report.

Report Prepared Date:

April 10, 2018

DISCUSSION

This report presents the results from the analyses performed on three samples submitted by a representative of Pace Analytical Services, Inc. The samples were analyzed for the presence or absence of 2,3,7,8-tetrachlorodibenzo-p-dioxin (2,3,7,8-TCDD) using a modified version of USEPA Method 8290. The reporting limits were set to correspond to the lowest calibration points and a nominal 10-gram sample amount, and the sensitivity was verified by signal-to-noise measurements. The quantitation limits, adjusted for sample extraction amount, may be somewhat higher or lower than the reporting limits provided in this report. The samples were received above the recommended temperature range of 0-6 degrees Celsius.

The recoveries of the isotopically-labeled TCDD internal standard in the sample extracts ranged from 42-73%. All of the labeled standard recoveries obtained for this project were within the 40-135% target range specified in Method 8290. Also, since the quantification of the native TCDD was based on isotope dilution, the data were automatically corrected for recovery and accurate values were obtained. In cases where the estimated detection limits (EDLs) were above the standard reporting limits, the EDLs were provided and flagged "A".

A laboratory method blank was prepared and analyzed with the sample batch as part of our routine quality control procedures. The results show the blank to be free of 2,3,7,8-TCDD at the reporting limit.

A laboratory spike sample was also prepared using clean reference matrix that had been fortified with native standard material. The results show that the spiked native TCDD was recovered at 95%. This result was within the target range for the method. Matrix spikes were prepared with the sample batch using sample material from a separate project; results from these analyses will be provided upon request.

Method 8290 Sample Analysis Results

Client - PACE Minnesota Field

Client's Sample ID	FD-WM-E5 (5-10wm)		
Lab Sample ID	10424442002		
Filename	U180408A_16		
Injected By	ZMS		
Total Amount Extracted	12.7 g	Matrix	Solid
% Moisture	30.4	Dilution	NA
Dry Weight Extracted	8.84 g	Collected	03/21/2018 13:00
ICAL ID	U180405	Received	03/21/2018 18:12
CCal Filename(s)	U180408A_06 & U180408A_20	Extracted	03/23/2018 17:15
Method Blank ID	BLANK-61285	Analyzed	04/09/2018 02:44

Native Isomers	Conc ng/Kg	EMPC ng/Kg	RL ng/Kg	Internal Standards	ng's Added	Percent Recovery
2,3,7,8-TCDD	1.5	----	1.4 A	2,3,7,8-TCDD-13C	2.00	42
				Recovery Standard 1,2,3,4-TCDD-13C	2.00	NA
				Cleanup Standard 2,3,7,8-TCDD-37Cl4	0.20	78

Conc = Concentration (Totals include 2,3,7,8-substituted isomers).
 EMPC = Estimated Maximum Possible Concentration
 RL = Reporting Limit

ND = Not Detected
 NA = Not Applicable
 NC = Not Calculated

Results reported on a dry weight basis and are valid to no more than 2 significant figures.

A = Reporting Limit based on signal to noise
 R = Recovery outside target range
 E = Exceeds calibration range

Minneapolis, MN 55414

RE: Project: 18-00383 MPCA Freeway LF Soils
Pace Project No.: 10424443

Dear Mr. Jacobson:

Enclosed are the analytical results for sample(s) received by the laboratory on March 21, 2018. The results relate only to the samples included in this report. Results reported herein conform to the most current, applicable TNI/NELAC standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Bob Michels

REPORT OF LABORATORY ANALYSIS

This report shall not be reproduced, except in full,
without the written consent of Pace Analytical Services, LLC.

ANALYTICAL RESULTS

Project: 18-00383 MPCA Freeway LF Soils

Pace Project No.: 10424443

Sample: FD-WM-C5 (15-17.5 wm) Lab ID: 10424443001 Collected: 03/21/18 10:05 Received: 03/21/18 18:12 Matrix: Solid

Results reported on a "dry weight" basis and are adjusted for percent moisture, sample size and any dilutions.

ANALYTICAL RESULTS

Project: 18-00383 MPCA Freeway LF Soils

Pace Project No.: 10424443

Sample: FD-WM-C5 (15-17.5 wm) Lab ID: 10424443001 Collected: 03/21/18 10:05 Received: 03/21/18 18:12 Matrix: Solid

Results reported on a "dry weight" basis and are adjusted for percent moisture, sample size and any dilutions.

REPORT OF LABORATORY ANALYSIS

This report shall not be reproduced, except in full,
without the written consent of Pace Analytical Services, LLC.

ANALYTICAL RESULTS

Project: 18-00383 MPCA Freeway LF Soils
Project No.: 10424443

Sample: **FD-WM-D5 (5-16 wm)** Lab ID: **10424443002** Collected: 03/21/18 11:45 Received: 03/21/18 18:12 Matrix: Solid

Results reported on a "dry weight" basis and are adjusted for percent moisture, sample size and any dilutions.

REPORT OF LABORATORY ANALYSIS

This report shall not be reproduced, except in full,
without the written consent of Pace Analytical Services, LLC.

ANALYTICAL RESULTS

Project: 18-00383 MPCA Freeway LF Soils

Pace Project No.: 10424443

Sample: **FD-WM-D5 (5-16 wm)** Lab ID: **10424443002** Collected: 03/21/18 11:45 Received: 03/21/18 18:12 Matrix: Solid

Results reported on a "dry weight" basis and are adjusted for percent moisture, sample size and any dilutions.

REPORT OF LABORATORY ANALYSIS

This report shall not be reproduced, except in full,
without the written consent of Pace Analytical Services, LLC.

ANALYTICAL RESULTS

Project: 18-00383 MPCA Freeway LF Soils

Pace Project No.: 10424443

Sample: **FD-WM-E5 (5-10 wm)** Lab ID: **10424443003** Collected: 03/21/18 13:00 Received: 03/21/18 18:12 Matrix: Solid

Results reported on a "dry weight" basis and are adjusted for percent moisture, sample size and any dilutions.

REPORT OF LABORATORY ANALYSIS

This report shall not be reproduced, except in full,
without the written consent of Pace Analytical Services, LLC.

ANALYTICAL RESULTS

Project: 18-00383 MPCA Freeway LF Soils

Pace Project No.: 10424443

Sample: **FD-WM-F5 (3-11 wm)** Lab ID: **10424443004** Collected: 03/21/18 15:30 Received: 03/21/18 18:12 Matrix: Solid

Results reported on a "dry weight" basis and are adjusted for percent moisture, sample size and any dilutions.

REPORT OF LABORATORY ANALYSIS

This report shall not be reproduced, except in full,
without the written consent of Pace Analytical Services, LLC.

ANALYTICAL RESULTS

Project: 18-00383 MPCA Freeway LF Soils

Pace Project No.: 10424443

Sample: FD-WM-F5 (3-11 wm) Lab ID: 10424443004 Collected: 03/21/18 15:30 Received: 03/21/18 18:12 Matrix: Solid

Results reported on a "dry weight" basis and are adjusted for percent moisture, sample size and any dilutions.

Parameters	Results	Units	Report Limit	DF	Prepared	Analyzed	CAS No.	Qual

REPORT OF LABORATORY ANALYSIS

This report shall not be reproduced, except in full,
without the written consent of Pace Analytical Services, LLC.

ANALYTICAL RESULTS

Project: 18-00383 MPCA Freeway LF Soils

Pace Project No.: 10424443

Sample: FD-WM-G5 (5-14 wm) Lab ID: 10424443005 Collected: 03/21/18 16:20 Received: 03/21/18 18:12 Matrix: Solid

Results reported on a "dry weight" basis and are adjusted for percent moisture, sample size and any dilutions.

REPORT OF LABORATORY ANALYSIS

This report shall not be reproduced, except in full,
without the written consent of Pace Analytical Services, LLC.

ANALYTICAL RESULTS

Project: 18-00383 MPCA Freeway LF Soils

Pace Project No.: 10424443

Sample: **FD-WM-F4 (5-10 wm)** Lab ID: **10424443006** Collected: 03/21/18 16:50 Received: 03/21/18 18:12 Matrix: Solid

Results reported on a "dry weight" basis and are adjusted for percent moisture, sample size and any dilutions.

REPORT OF LABORATORY ANALYSIS

This report shall not be reproduced, except in full,
without the written consent of Pace Analytical Services, LLC.

ANALYTICAL RESULTS

Project: 18-00383 MPCA Freeway LF Soils

Pace Project No.: 10424443

Sample: **FD-WM-F4 (5-10 wm)** Lab ID: **10424443006** Collected: 03/21/18 16:50 Received: 03/21/18 18:12 Matrix: Solid

Results reported on a "dry weight" basis and are adjusted for percent moisture, sample size and any dilutions.

QUALIFIERS

Project: 18-00383 MPCA Freeway LF Soils
Pace Project No.: 10424443

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.
ND - Not Detected at or above adjusted reporting limit.
TNTC - Too Numerous To Count
J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.
MDL - Adjusted Method Detection Limit.
PQL - Practical Quantitation Limit.
RL - Reporting Limit.
S - Surrogate
1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.
Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.
LCS(D) - Laboratory Control Sample (Duplicate)
MS(D) - Matrix Spike (Duplicate)
DUP - Sample Duplicate
RPD - Relative Percent Difference
NC - Not Calculable.
SG - Silica Gel - Clean-Up
U - Indicates the compound was analyzed for, but not detected.
N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.
Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.
TNI - The NELAC Institute.

LABORATORIES

PASI-DUL Pace Analytical Services - Duluth
PASI-G Pace Analytical Services - Green Bay
PASI-I Pace Analytical Services - Indianapolis
PASI-M Pace Analytical Services - Minneapolis
PASI-V Pace Analytical Services - Virginia

WORKORDER QUALIFIERS

WO: 10424443
[1] Samples were received outside of the recommended temperature range of 0-6 degrees Celsius. The samples were received from the field on ice.

BATCH QUALIFIERS

Batch: 529212
[M5] A matrix spike/matrix spike duplicate was not performed for this batch due to insufficient sample volume.

ANALYTE QUALIFIERS

1M RPD value is outside control limits due to sample non-homogeneity.
2M Redox (174 mv) and pH (8.13) values indicate a naturally reducing matrix. This accounts for poor recovery values on the sample per method Eh/pH phase diagram.
3M Redox (25 mv) and pH (7.84) values indicate a naturally reducing matrix. This accounts for poor recovery values on the sample per method Eh/pH phase diagram.

REPORT OF LABORATORY ANALYSIS

This report shall not be reproduced, except in full,

QUALIFIERS

Project: 18-00383 MPCA Freeway LF Soils

Pace Project No.: 10424443

ANALYTE QUALIFIERS

4M	Sample was black in color and slightly viscous. Sample needed to be centrifuged and decanted prior to analysis.
5M	Sample was black in color and very viscous and grainy. Sample needed to be centrifuged and decanted prior to analysis.
6M	Sample was black in color. Sample needed to be centrifuged and decanted prior to analysis.
7M	Sample was dark brown in color.
C0	Result confirmed by second analysis.
D3	Sample was diluted due to the presence of high levels of non-target analytes or other matrix interference.
D4	Sample was diluted due to the presence of high levels of target analytes.
L3	Analyte recovery in the laboratory control sample (LCS) exceeded QC limits. Analyte presence below reporting limits in associated samples.
M0	Matrix spike recovery and/or matrix spike duplicate recovery was outside laboratory control limits.
M1	Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.
M3	Matrix spike recovery was outside laboratory control limits due to matrix interferences.
M6	Matrix spike and Matrix spike duplicate recovery not evaluated against control limits due to sample dilution.
N2	The lab does not hold NELAC/TNI accreditation for this parameter.
N3	Accreditation is not offered by the relevant laboratory accrediting body for this parameter.
P3	Sample extract could not be concentrated to the routine final volume, resulting in elevated reporting limits.
P6	Matrix spike recovery was outside laboratory control limits due to a parent sample concentration notably higher than the spike level.
R1	RPD value was outside control limits.
S0	Surrogate recovery outside laboratory control limits.
S4	Surrogate recovery not evaluated against control limits due to sample dilution.
S5	Surrogate recovery outside control limits due to matrix interferences (not confirmed by re-analysis).
T6	High boiling point hydrocarbons are present in the sample.

REPORT OF LABORATORY ANALYSIS

This report shall not be reproduced, except in full,
without the written consent of Pace Analytical Services, LLC.

LABORATORY ANALYTICAL PARAMETER LISTS
SOIL and WASTE MATERIAL
 Freeway Landfill and Dump Investigation
 Site Investigation Plan

Parameter List S	Methods
Metals	
Aluminum, Barium, Boron, Copper, Iron, Manganese, Nickel, Silver, Tin, Titanium, Zinc	EPA 6010C
Antimony, Arsenic, Beryllium, Cadmium, Chromium III (calculated), Cobalt, Lead, Lithium, Selenium, Strontium, Vanadium	EPA 6020A
Chromium VI	EPA 7196
Copper Cyanide Test as Total Cyanide	EPA 9012
Fluorine, test as Total Fluoride	EPA 9056A
Mercury	EPA 7471
Methyl Mercury	EPA 1630
Dioxins 2,3,7,8 TCDD*	EPA 8290
Pesticides (DDT, DDE, DDD, etc)	EPA 8081A
Herbicides	MDA List II
PCBs	EPA 8082
PAHs (standard list)	EPA 8270 SIM
SVOCs	EPA 8270
VOCS	EPA 8260
GRO	WI GRO
DRO	WI DRO

* Assumed that Dioxin analysis shall only be requested for approximately half of the samples. To be determined in the field by MPCA staff.

RE: Project: 18-00383 MPCA Freeway LF Water
Pace Project No.: 10424447

Dear Mr. Jacobson:

Enclosed are the analytical results for sample(s) received by the laboratory on March 21, 2018. The results relate only to the samples included in this report. Results reported herein conform to the most current, applicable TNI/NELAC standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Bob Michels

QUALIFIERS

Project: 18-00383 MPCA Freeway LF Water
Pace Project No.: 10424447

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.
ND - Not Detected at or above adjusted reporting limit.
TNTC - Too Numerous To Count
J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.
MDL - Adjusted Method Detection Limit.
PQL - Practical Quantitation Limit.
RL - Reporting Limit.
S - Surrogate
1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.
Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.
LCS(D) - Laboratory Control Sample (Duplicate)
MS(D) - Matrix Spike (Duplicate)
DUP - Sample Duplicate
RPD - Relative Percent Difference
NC - Not Calculable.
SG - Silica Gel - Clean-Up
U - Indicates the compound was analyzed for, but not detected.
N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.
Act - Activity
Unc - Uncertainty: SDWA = 1.96 sigma count uncertainty, all other matrices = Expanded Uncertainty (95% confidence interval).
Gamma Spec = Expanded Uncertainty (95.4% Confidence Interval)
(MDC) - Minimum Detectable Concentration
Trac - Tracer Recovery (%)
Carr - Carrier Recovery (%)
Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.
TNI - The NELAC Institute.

PASI-PA Pace Analytical Services - Greensburg

WORKORDER QUALIFIERS

WO: 10424447
[1] Samples were received outside of the recommended temperature range of 0-6 degrees Celsius. The samples were received from the field on ice.

BATCH QUALIFIERS

Batch: 19125
[M5] A matrix spike/matrix spike duplicate was not performed for this batch due to insufficient sample volume.

REPORT OF LABORATORY ANALYSIS

This report shall not be reproduced, except in full,
without the written consent of Pace Analytical Services, LLC.

QUALIFIERS

Project: 18-00383 MPCA Freeway LF Water

Pace Project No.: 10424447

BATCH QUALIFIERS

Batch: 529070

[M5] A matrix spike/matrix spike duplicate was not performed for this batch due to insufficient sample volume.

Batch: 529209

[BE] Batch extracted by solid phase extraction (SPE).

Batch: 529242

[M5] A matrix spike/matrix spike duplicate was not performed for this batch due to insufficient sample volume.

ANALYTE QUALIFIERS

- 1M Post-analysis pH measurement indicates insufficient VOA sample preservation. Therefore, analysis was conducted outside the recognized method holding time.
- 2M Sample was dark grey in color and grainy. Sample needed to be centrifuged and decanted. Emulsion was also present during extraction.
- 3M Sample was light grey in color and grainy. Sample needed to be centrifuged and decanted. Emulsion was also present during extraction.
- B4 The glucose/glutamic acid standard exceeded the range of 198 plus or minus 30.5 mg/L.
- B6 The calculated seed correction exceeded the range of 0.6 to 1.0 mg/L.
- CH The continuing calibration for this compound is outside of Pace Analytical acceptance limits. The results may be biased high.
- D3 Sample was diluted due to the presence of high levels of non-target analytes or other matrix interference.
- FS The sample was filtered in the laboratory prior to analysis.
- H1 Analysis conducted outside the EPA method holding time.
- H1 Analysis conducted outside the recognized method holding time.
- H2 Extraction or preparation conducted outside EPA method holding time.
- H3 Sample was received or analysis requested beyond the recognized method holding time.
- H6 Analysis initiated outside of the 15 minute EPA required holding time.
- HS Results are from sample aliquot taken from VOA vial with headspace (air bubble greater than 6 mm diameter).
- L3 Analyte recovery in the laboratory control sample (LCS) exceeded QC limits. Analyte presence below reporting limits in associated samples.
- M1 Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.
- M3 Matrix spike recovery was outside laboratory control limits due to matrix interferences.
- M6 Matrix spike and Matrix spike duplicate recovery not evaluated against control limits due to sample dilution.
- P4 Sample field preservation does not meet EPA or method recommendations for this analysis.
- R1 RPD value was outside control limits.
- S4 Surrogate recovery not evaluated against control limits due to sample dilution.

USDA Regulated Soil (N/A, water sample)

Did samples originate in a quarantine zone within the United States: AL, AR, CA, FL, GA, ID, LA, MS, NC, NM, NY, OK, OR, SC, TN, TX or VA (check maps)? Yes No
Did samples originate from a foreign source (internationally, including Hawaii and Puerto Rico)? Yes No

If Yes to either question, fill out a Regulated Soil Checklist (F-MN-Q-338) and include with SCUR/COC paperwork.

Place a check mark in the Received box if pH is acceptable. If pH is not acceptable, document the Received and Adjusted pH values in the appropriate columns (all adjustments must be reviewed by the project manager). Never add more than 2x the default preservation volume (see table below for default volumes). Complete and attach an orange preservation tag to all adjusted samples. A Sample Receiving Non-Conformance Report must be completed if a pH adjustment was required.

RE: 18-00383 MPCA Freeway LF Water - MN

Enclosed are the analytical results for the samples received by the laboratory on 03/23/2018.

The results in this report apply to the samples analyzed in accordance with the chain of custody document. These results are in compliance with the 2009 NELAC Standards and the appropriate agencies listed below, unless otherwise noted in the case narrative. This analytical report should be reproduced in its entirety.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Jessica Esser
Project Manager

ANALYTICAL REPORT FOR SAMPLES

Sample ID	Laboratory ID	Matrix	Date Sampled	Date Received
FD-A5 (10424447001)	A181209-01	Water	03/21/2018	03/23/2018

CASE NARRATIVE

Sample Receipt Information:

3 samples were received on 03/23/2018. Samples were received at 2.9 degrees Celsius. Samples were received in acceptable condition.

Analysis for samples A181209-02 and A181209-03 was put on hold per the client.

Please see the chain of custody (COC) document at the end of this report for additional information.

Laboratory Control Samples (LCS):

The LCS recovery indicates a potential high bias for 2,4,5-T, 2,4,5-TP (silvex) and triclopyr for sample A181209-01. Sample was less than the reporting limit for these analytes so no further action is required.

Continuing Calibration Verification (CCV):

CCV indicates a potential high bias for 2,4,5-TP, bentazon, dicamba, MCPA and triclopyr for sample A181209-01. Sample was less than the reporting limit for this analyte so no further action is required.

Additional Comments:

Sample A181209-01 had to be run at an initial dilution factor of 1:10 for the base neutral pesticides by GC/MS analysis, due to the sample matrix. The limit of detection and limit of quantitation have been raised accordingly.

Report of Laboratory Analysis

This report should not be reproduced, except in full, without the written consent of Pace Analytical Services, Inc.

The results relate only to the samples included in this report.

Report Prepared Date:

April 4, 2018

DISCUSSION

This report presents the results from the analyses performed on three samples submitted by a representative of Pace Analytical Services, Inc. The samples were analyzed for the presence or absence of 2,3,7,8-tetrachlorodibenzo-p-dioxin (2,3,7,8-TCDD) using USEPA Method 1613B. The reporting limits were set to correspond to the lowest calibration point and a nominal 1-Liter sample amount, and the sensitivity was verified by signal-to-noise measurements. The quantitation limits, adjusted for sample extraction amount, may be somewhat higher or lower than the reporting limits provided in this report.

The recoveries of the isotopically-labeled TCDD internal standard in the sample extracts ranged from 79-86%. All of the labeled standard recoveries obtained for this project were within the target ranges specified in Method 1613B. Also, since the quantification of the native TCDD was based on isotope dilution, the data were automatically corrected for recovery and accurate values were obtained.

A laboratory method blank was prepared and analyzed with the sample batch as part of our routine quality control procedures. The results show the blank to be free of 2,3,7,8-TCDD at the reporting limit.

Laboratory spike samples were also prepared using clean reference matrix that had been fortified with native standard material. The results show that the spiked native TCDD was recovered at 98-99% with a relative percent difference of 1.0%. These results were within the target ranges for the method. Matrix spikes were not prepared with the sample batch.

April 17, 2018

Mr. Brad Jacobson
Pace Analytical Services, LLC..
1700 Elm Street
Suite 200
Minneapolis, MN 55414

RE: Project: 18-00383 MPCA FreewayLF Waters
Pace Project No.: 10424606

Dear Mr. Jacobson:

Enclosed are the analytical results for sample(s) received by the laboratory on March 22, 2018. The results relate only to the samples included in this report. Results reported herein conform to the most current, applicable TNI/NELAC standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

Unionized Ammonia was not calculated for sample FD-SB-E5 due to insufficient volume to conduct the field pH & Temperature..

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Bob Michels
bob.michels@pacelabs.com

QUALIFIERS

Project: 18-00383 MPCA FreewayLF Waters

Pace Project No.: 10424606

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

TNTC - Too Numerous To Count

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Act - Activity

Unc - Uncertainty: SDWA = 1.96 sigma count uncertainty, all other matrices = Expanded Uncertainty (95% confidence interval).

Gamma Spec = Expanded Uncertainty (95.4% Confidence Interval)

(MDC) - Minimum Detectable Concentration

Trac - Tracer Recovery (%)

Carr - Carrier Recovery (%)

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

BATCH QUALIFIERS

Batch: 19125

[M5] A matrix spike/matrix spike duplicate was not performed for this batch due to insufficient sample volume.

REPORT OF LABORATORY ANALYSIS

This report shall not be reproduced, except in full,
without the written consent of Pace Analytical Services, LLC.

QUALIFIERS

Project: 18-00383 MPCA FreewayLF Waters

Pace Project No.: 10424606

BATCH QUALIFIERS

Batch: 529575

[BE] Batch extracted by solid phase extraction (SPE).

Batch: 530078

[M5] A matrix spike/matrix spike duplicate was not performed for this batch due to insufficient sample volume.

Batch: 530399

[M5] A matrix spike/matrix spike duplicate was not performed for this batch due to insufficient sample volume.

Batch: 530440

[M5] A matrix spike/matrix spike duplicate was not performed for this batch due to insufficient sample volume.

ANALYTE QUALIFIERS

- 1M The associated compound was outside of 20% for the associated continuing calibration but within 40% of the true value.
- D3 Sample was diluted due to the presence of high levels of non-target analytes or other matrix interference.
- D6 The precision between the sample and sample duplicate exceeded laboratory control limits.
- H3 Sample was received or analysis requested beyond the recognized method holding time.
- H6 Analysis initiated outside of the 15 minute EPA required holding time.
- L1 Analyte recovery in the laboratory control sample (LCS) was above QC limits. Results for this analyte in associated samples may be biased high.
- L2 Analyte recovery in the laboratory control sample (LCS) was below QC limits. Results for this analyte in associated samples may be biased low.
- L3 Analyte recovery in the laboratory control sample (LCS) exceeded QC limits. Analyte presence below reporting limits in associated samples.
- M0 Matrix spike recovery and/or matrix spike duplicate recovery was outside laboratory control limits.
- M1 Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.
- M3 Matrix spike recovery was outside laboratory control limits due to matrix interferences.
- M6 Matrix spike and Matrix spike duplicate recovery not evaluated against control limits due to sample dilution.
- R1 RPD value was outside control limits.

LABORATORY ANALYTICAL PARAMETER LISTS
LIQUID SAMPLING
 Freeway Landfill and Dump Investigation
 Site Investigation Plan

Parameter List A	Methods
General Parameters	
Biochemical Oxygen Demand (5-day)	HACH 10360
Cyanide, Total	SM 4500CNE
Cyanide, Free	SM 4500C1G
Dissolved Oxygen	Field Parameter
Fluoride	EPA 300.0
Hardness, as CaCO3	SM 2340B
Nitrogen, ammonia, as N	EPA 350.1
Nitrogen: nitrate + nitrite, as N; nitrate, as N; nitrite, as N	EPA 353.2
Nitrogen, unionized ammonia, as N	EPA 350.1 Calc
Oil and Grease	EPA 1664
pH	SM 4500H+B
Phosphorus, total, as P	SM 4500PE
Secchi Disc (Surface Water Only)	Field Parameter
Solids, total suspended	SM 2540D
Turbidity	EPA 180.1
Metals - Dissolved Metals per 3/19/18 M. W. P. L.	
Aluminum, Barium, Copper, Manganese, Nickel, Silver, Tin, Zinc	EPA 200.7
Antimony, Arsenic, Beryllium, Boron, Cadmium, Chromium, Cobalt, Lead, Selenium, Thallium, Uranium, Vanadium	EPA 200.8
Chromium, hexavalent	SM3500CRB
Mercury	EPA 245.1
Dioxins / Furans	
	EPA 1613B
Herbicides / Pesticides	
Organochlorine Pesticides	EPA 8081
SVOCs	
	EPA 8270C
PCBs	
	EPA 8082
PFCs	
	EPA 537
VOCs	
	EPA 8260 LL/SIM
1,4-Dioxane	EPA 8270 SIM

- Analysis by MDH Laboratory

Parameter List B	Methods
General Parameters	
Bromate, Chlorite	EPA 300.1
Chlorine dioxide	SM4500ClO2
Herbicides / Pesticides	
Herbicides, 10 Compounds	EPA 8151 MDA List II
Pesticides, 17 Compounds	MDA List 1 (8270 Pest)
Diquat	EPA 549.2
VOCs	
DBCP & EDB	EPA 8011
1,4-Dioxane	EPA 8270 SIM
Acrylamide	EPA 8316 PDFW
Ethylene glycol, Methyl alcohol	EPA 8015 PII
Formaldehyde	EPA 8315 PGRM
Trihalomethanes, total (TTHMMss)	EPA 524.2
Radiochemical	
Gross Alpha (radiation), Gross Beta (radiation)	EPA 900.0
Glyphosate	EPA 547
Haloacetic Acids	
	EPA 552.2

Parameter List C	Methods
General Parameters	
Chloride	EPA 300.00
Herbicides / Pesticides	
Aldicarb, Carbofuran	EPA 8318
Endothall	EPA 548.1
Radiochemical	
Radium 226	EPA 903.1
Radium 228	EPA 904.0
Radium, total	EPA 903.0

Place a check mark in the Received box if pH is acceptable. If pH is not acceptable, document the Received and Adjusted pH values in the appropriate columns (all adjustments must be reviewed by the project manager). Never add more than 2x the default preservation volume (see table below for default volumes). Complete and attach an orange preservation tag to all adjusted samples. A Sample Receiving Non-Conformance Report must be completed if a pH adjustment was required.

RE: 18-00383 MPCA Freeway LF Water - MN

Enclosed are the analytical results for the samples received by the laboratory on 03/28/2018.

The results in this report apply to the samples analyzed in accordance with the chain of custody document. These results are in compliance with the 2009 NELAC Standards and the appropriate agencies listed below, unless otherwise noted in the case narrative. This analytical report should be reproduced in its entirety.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Jessica Esser
Project Manager

ANALYTICAL REPORT FOR SAMPLES

Sample ID	Laboratory ID	Matrix	Date Sampled	Date Received
FD-SB-E5 (10424606001)	A181311-01	Water	03/22/2018	03/28/2018

CASE NARRATIVE

Sample Receipt Information:

1 sample was received on 03/28/2018. Sample was received at 1.1 degrees Celsius. Sample was received in acceptable condition.

Please see the chain of custody (COC) document at the end of this report for additional information.

Continuing Calibration Verification (CCV):

CCV indicates a potential high bias for 2,4,5-TP, bentazon, dicamba, MCPA and triclopyr for sample A181311-01. Sample was less than the reporting limit for this analyte so no further action is required.

Report of Laboratory Analysis

This report should not be reproduced, except in full, without the written consent of Pace Analytical Services, Inc.

The results relate only to the samples included in this report.

Report Prepared Date:

April 2, 2018

DISCUSSION

This report presents the results from the analysis performed on one sample submitted by a representative of PACE Minnesota Field. The sample was analyzed for the presence or absence of 2,3,7,8-tetrachlorodibenzo-p-dioxin (2,3,7,8-TCDD) using USEPA Method 1613B. The reporting limits were set to correspond to the lowest calibration points and a nominal 1-liter sample amount, and the sensitivity was verified by signal-to-noise measurements. The quantitation limits, adjusted for sample extraction amount, may be somewhat higher or lower than the reporting limits provided in this report. The sample was received above the recommended temperature range of 0-6 degrees Celsius.

The isotopically-labeled TCDD internal standard in the sample extract was recovered at 75%. All of the labeled standard recoveries obtained for this project were within the target ranges specified in Method 1613B. Also, since the quantification of the native TCDD was based on isotope dilution, the data were automatically corrected for recovery and accurate values were obtained.

A laboratory method blank was prepared and analyzed with the sample batch as part of our routine quality control procedures. The results show the blank to be free of 2,3,7,8-TCDD at the reporting limit.

Laboratory spike samples were also prepared using clean reference matrix that had been fortified with native standard material. The results show that the spiked native TCDD was recovered at 98-99% with a relative percent difference of 1.0%. These results were within the target ranges for the method. Matrix spikes were not prepared with the sample batch.

RE: Project: 18-00383 MPCA FreewayLF Solids-Revised Report
Pace Project No.: 10424609

Dear Mr. Jacobson:

Enclosed are the analytical results for sample(s) received by the laboratory on March 22, 2018. The results relate only to the samples included in this report. Results reported herein conform to the most current, applicable TNI/NELAC standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

This report was revised on May 3, 2018 to exlude results for magnesium and include results for manganese by method 6010.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Bob Michels

ANALYTICAL RESULTS

Project: 18-00383 MPCA FreewayLF Solids-Revised Report

Pace Project No.: 10424609

Sample: FD-SB-A4 (26-32.5) **Lab ID: 10424609001** Collected: 03/22/18 11:25 Received: 03/22/18 17:40 Matrix: Solid

Results reported on a "dry weight" basis and are adjusted for percent moisture, sample size and any dilutions.

ANALYTICAL RESULTS

Project: 18-00383 MPCA FreewayLF Solids-Revised Report

Pace Project No.: 10424609

Sample: FD-SB-B4-WM (3-20 WM) Lab ID: 10424609002 Collected: 03/22/18 13:20 Received: 03/22/18 17:40 Matrix: Solid

Results reported on a "dry weight" basis and are adjusted for percent moisture, sample size and any dilutions.

ANALYTICAL RESULTS

Project: 18-00383 MPCA FreewayLF Solids-Revised Report

Pace Project No.: 10424609

Sample: FD-SB-C4-WM (5-20 WM) Lab ID: 10424609003 Collected: 03/22/18 15:00 Received: 03/22/18 17:40 Matrix: Solid

Results reported on a "dry weight" basis and are adjusted for percent moisture, sample size and any dilutions.

Parameters	Results	Units	Report Limit	DF	Prepared	Analyzed	CAS No.	Qual

REPORT OF LABORATORY ANALYSIS

This report shall not be reproduced, except in full,
without the written consent of Pace Analytical Services, LLC.

ANALYTICAL RESULTS

Project: 18-00383 MPCA FreewayLF Solids-Revised Report

Pace Project No.: 10424609

Sample: FD-SB-E4-WM (3-21) **Lab ID: 10424609005** Collected: 03/22/18 16:30 Received: 03/22/18 17:40 Matrix: Solid

Results reported on a "dry weight" basis and are adjusted for percent moisture, sample size and any dilutions.

QUALIFIERS

Project: 18-00383 MPCA FreewayLF Solids-Revised Report
Pace Project No.: 10424609

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.
ND - Not Detected at or above adjusted reporting limit.
TNTC - Too Numerous To Count
J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.
MDL - Adjusted Method Detection Limit.
PQL - Practical Quantitation Limit.
RL - Reporting Limit.
S - Surrogate
1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.
Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.
LCS(D) - Laboratory Control Sample (Duplicate)
MS(D) - Matrix Spike (Duplicate)
DUP - Sample Duplicate
RPD - Relative Percent Difference
NC - Not Calculable.
SG - Silica Gel - Clean-Up
U - Indicates the compound was analyzed for, but not detected.
N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.
Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.
TNI - The NELAC Institute.

LABORATORIES

PASI-DUL Pace Analytical Services - Duluth
PASI-G Pace Analytical Services - Green Bay
PASI-I Pace Analytical Services - Indianapolis
PASI-M Pace Analytical Services - Minneapolis
PASI-V Pace Analytical Services - Virginia

BATCH QUALIFIERS

Batch: 529212

[M5] A matrix spike/matrix spike duplicate was not performed for this batch due to insufficient sample volume.

ANALYTE QUALIFIERS

1M RPD value is outside control limits due to sample non-homogeneity.
2M Redox (25 mv) and pH (7.84) values indicate a naturally reducing matrix. This accounts for poor recovery values on the sample per method Eh/pH phase diagram.
3M Sample was black in color and needed to be centrifuged and decanted prior to analysis.
4M Sample was black in color and slightly viscous. Sample needed to be centrifuged and decanted prior to analysis.
5M Sample was dark brown in color.
6M The associated compound was outside of 20% for the associated continuing calibration but within 40% of the true value.
7M The sample was re-weighed into a new container because the original container had no tare weight.
C0 Result confirmed by second analysis.

QUALIFIERS

Project: 18-00383 MPCA FreewayLF Solids-Revised Report

Pace Project No.: 10424609

ANALYTE QUALIFIERS

D3	Sample was diluted due to the presence of high levels of non-target analytes or other matrix interference.
D4	Sample was diluted due to the presence of high levels of target analytes.
L3	Analyte recovery in the laboratory control sample (LCS) exceeded QC limits. Analyte presence below reporting limits in associated samples.
M0	Matrix spike recovery and/or matrix spike duplicate recovery was outside laboratory control limits.
M1	Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.
M3	Matrix spike recovery was outside laboratory control limits due to matrix interferences.
M6	Matrix spike and Matrix spike duplicate recovery not evaluated against control limits due to sample dilution.
N2	The lab does not hold NELAC/TNI accreditation for this parameter.
N3	Accreditation is not offered by the relevant laboratory accrediting body for this parameter.
P3	Sample extract could not be concentrated to the routine final volume, resulting in elevated reporting limits.
P6	Matrix spike recovery was outside laboratory control limits due to a parent sample concentration notably higher than the spike level.
R1	RPD value was outside control limits.
S0	Surrogate recovery outside laboratory control limits.
S4	Surrogate recovery not evaluated against control limits due to sample dilution.
S5	Surrogate recovery outside control limits due to matrix interferences (not confirmed by re-analysis).
T6	High boiling point hydrocarbons are present in the sample.

Report of Laboratory Analysis

This report should not be reproduced, except in full, without the written consent of Pace Analytical Services, Inc.

The results relate only to the samples included in this report.

Report Prepared Date:

April 4, 2018

DISCUSSION

This report presents the results from the analyses performed on three samples submitted by a representative of Pace Analytical Services, Inc. The samples were analyzed for the presence or absence of 2,3,7,8-tetrachlorodibenzo-p-dioxin (2,3,7,8-TCDD) using a modified version of USEPA Method 8290. The reporting limits were set to correspond to the lowest calibration points and a nominal 10-gram sample amount, and the sensitivity was verified by signal-to-noise measurements. The quantitation limits, adjusted for sample extraction amount, may be somewhat higher or lower than the reporting limits provided in this report.

The recoveries of the isotopically-labeled TCDD internal standard in the sample extracts ranged from 61-73%. All of the labeled standard recoveries obtained for this project were within the 40-135% target range specified in Method 8290. Also, since the quantification of the native TCDD was based on isotope dilution, the data were automatically corrected for recovery and accurate values were obtained.

A laboratory method blank was prepared and analyzed with the sample batch as part of our routine quality control procedures. The results show that 2,3,7,8-TCDD was not detected, indicating that the sample processing steps were free of background levels of this congener.

Laboratory and matrix spike samples were also prepared with the sample batch using clean reference matrix or sample matrix that had been fortified with native standard materials. The results show that the spiked native TCDD was recovered at 94-102% with a relative percent difference of 0.1%. These results were within the target ranges for the method.

* Assumed that Dioxin analysis shall only be requested for approximately half of the samples. To be determined in the field by MPCA staff.

Reporting Flags

- A = Reporting Limit based on signal to noise
- B = Less than 10x higher than method blank level
- C = Result obtained from confirmation analysis
- D = Result obtained from analysis of diluted sample
- E = Exceeds calibration range
- I = Interference present
- J = Estimated value
- Nn = Value obtained from additional analysis
- P = PCDE Interference
- R = Recovery outside target range
- S = Peak saturated
- U = Analyte not detected
- V = Result verified by confirmation analysis
- X = %D Exceeds limits
- Y = Calculated using average of daily RFs
- * = See Discussion

Mr. Brad Jacobson
Pace Analytical Services, LLC..
1700 Elm Street
Suite 200
Minneapolis, MN 55414

RE: Project: 18-00383 MPCA Freeway LF Water
Pace Project No.: 10424766

Dear Mr. Jacobson:

Enclosed are the analytical results for sample(s) received by the laboratory on March 23, 2018. The results relate only to the samples included in this report. Results reported herein conform to the most current, applicable TNI/NELAC standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

Unionized Ammonia was not calculated for sample FD-SB-B4 due to insufficient volume to conduct the field pH & Temperature

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Bob Michels
bob.michels@pacelabs.com

QUALIFIERS

Project: 18-00383 MPCA Freeway LF Water

Pace Project No.: 10424766

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

TNTC - Too Numerous To Count

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

LABORATORIES

PASI-GRMI Pace Analytical Services - Grand Rapids Michigan

PASI-M Pace Analytical Services - Minneapolis

PASI-V Pace Analytical Services - Virginia

WORKORDER QUALIFIERS

WO: 10424766

[1] Samples were received outside of the recommended temperature range of 0-6 degrees Celsius. The samples were received from the field on ice.

BATCH QUALIFIERS

Batch: 529648

[M5] A matrix spike/matrix spike duplicate was not performed for this batch due to insufficient sample volume.

Batch: 530075

[BE] Batch extracted by solid phase extraction (SPE).

Batch: 530078

[M5] A matrix spike/matrix spike duplicate was not performed for this batch due to insufficient sample volume.

Batch: 530399

[M5] A matrix spike/matrix spike duplicate was not performed for this batch due to insufficient sample volume.

REPORT OF LABORATORY ANALYSIS

This report shall not be reproduced, except in full,

QUALIFIERS

Project: 18-00383 MPCA Freeway LF Water

Pace Project No.: 10424766

ANALYTE QUALIFIERS

- 1M Sample pH adjusted using 1mL 6N HCl.
- 2M Sample was yellow in color. Emulsion was also present during the extraction process.
- 3M The associated compound was outside of 20% for the associated continuing calibration but within 40% of the true value.
- D3 Sample was diluted due to the presence of high levels of non-target analytes or other matrix interference.
- D6 The precision between the sample and sample duplicate exceeded laboratory control limits.
- FS The sample was filtered in the laboratory prior to analysis.
- H3 Sample was received or analysis requested beyond the recognized method holding time.
- H6 Analysis initiated outside of the 15 minute EPA required holding time.
- M0 Matrix spike recovery and/or matrix spike duplicate recovery was outside laboratory control limits.
- M1 Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.
- M3 Matrix spike recovery was outside laboratory control limits due to matrix interferences.
- M6 Matrix spike and Matrix spike duplicate recovery not evaluated against control limits due to sample dilution.
- S4 Surrogate recovery not evaluated against control limits due to sample dilution.

Place a check mark in the Received box if pH is acceptable. If pH is not acceptable, document the Received and Adjusted pH values in the appropriate columns (all adjustments must be reviewed by the project manager). Never add more than 2x the default preservation volume (see table below for default volumes). Complete and attach an orange preservation tag to all adjusted samples. A Sample Receiving Non-Conformance Report must be completed if a pH adjustment was required.

Report of Laboratory Analysis

This report should not be reproduced, except in full, without the written consent of Pace Analytical Services, Inc.

The results relate only to the samples included in this report.

Report Prepared Date:

April 5, 2018

DISCUSSION

This report presents the results from the analysis performed on one sample submitted by a representative of PACE Minnesota Field. The sample was analyzed for the presence or absence of 2,3,7,8-tetrachlorodibenzo-p-dioxin (2,3,7,8-TCDD) using USEPA Method 1613B. The reporting limits were set to correspond to the lowest calibration points and a nominal 1-liter sample amount, and the sensitivity was verified by signal-to-noise measurements. The quantitation limits, adjusted for sample extraction amount, may be somewhat higher or lower than the reporting limits provided in this report. The sample was received above the recommended temperature range of 0-6 degrees Celsius.

The isotopically-labeled TCDD internal standard in the sample extract was recovered at 54%. All of the labeled standard recoveries obtained for this project were within the target ranges specified in Method 1613B. Also, since the quantification of the native TCDD was based on isotope dilution, the data were automatically corrected for recovery and accurate values were obtained.

A laboratory method blank was prepared and analyzed with the sample batch as part of our routine quality control procedures. The results show the blank to be free of 2,3,7,8-TCDD at the reporting limit.

Laboratory spike samples were also prepared using clean reference matrix that had been fortified with native standard material. The results show that the spiked native TCDD was recovered at 121-124% with a relative percent difference of 2.4%. These results were within the target ranges for the method. Matrix spikes were not prepared with the sample batch.

Pace Project No.: 10424793

Dear Mr. Jacobson:

Enclosed are the analytical results for sample(s) received by the laboratory on March 23, 2018. The results relate only to the samples included in this report. Results reported herein conform to the most current, applicable TNI/NELAC standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Bob Michels
bob.michels@pacelabs.com

REPORT OF LABORATORY ANALYSIS

This report shall not be reproduced, except in full,
without the written consent of Pace Analytical Services, LLC.

ANALYTICAL RESULTS

Project: 18-00383 MPCA FreewayLF Solids

Pace Project No.: 10424793

Sample: **FD-SB-A3-S (30-35)** Lab ID: **10424793001** Collected: 03/23/18 12:30 Received: 03/23/18 16:00 Matrix: Solid

Results reported on a "dry weight" basis and are adjusted for percent moisture, sample size and any dilutions.

REPORT OF LABORATORY ANALYSIS

This report shall not be reproduced, except in full,
without the written consent of Pace Analytical Services, LLC.

ANALYTICAL RESULTS

Project: 18-00383 MPCA FreewayLF Solids

Pace Project No.: 10424793

Sample: **FD-SB-B3-WM (5-26)** Lab ID: **10424793002** Collected: 03/23/18 13:30 Received: 03/23/18 16:00 Matrix: Solid

Results reported on a "dry weight" basis and are adjusted for percent moisture, sample size and any dilutions.

REPORT OF LABORATORY ANALYSIS

This report shall not be reproduced, except in full,
without the written consent of Pace Analytical Services, LLC.

ANALYTICAL RESULTS

Project: 18-00383 MPCA FreewayLF Solids

Pace Project No.: 10424793

Sample: FD-SB-C3-WM (5-20) **Lab ID: 10424793003** Collected: 03/23/18 14:30 Received: 03/23/18 16:00 Matrix: Solid

Results reported on a "dry weight" basis and are adjusted for percent moisture, sample size and any dilutions.

REPORT OF LABORATORY ANALYSIS

This report shall not be reproduced, except in full,
without the written consent of Pace Analytical Services, LLC.

ANALYTICAL RESULTS

Project: 18-00383 MPCA FreewayLF Solids

Pace Project No.: 10424793

Sample: FD-SB-C3-WM (5-20) **Lab ID: 10424793003** Collected: 03/23/18 14:30 Received: 03/23/18 16:00 Matrix: Solid

Results reported on a "dry weight" basis and are adjusted for percent moisture, sample size and any dilutions.

ANALYTICAL RESULTS

Project: 18-00383 MPCA FreewayLF Solids

Pace Project No.: 10424793

Sample: FD-SB-C3-WM (5-20) **Lab ID: 10424793003** Collected: 03/23/18 14:30 Received: 03/23/18 16:00 Matrix: Solid

Results reported on a "dry weight" basis and are adjusted for percent moisture, sample size and any dilutions.

Parameters	Results	Units	Report Limit	DF	Prepared	Analyzed	CAS No.	Qual
7196 Chromium, Hexavalent								
Analytical Method: EPA 7196A Preparation Method: EPA 3060A								
Chromium, Hexavalent	ND	mg/kg	12.8	5	04/05/18 08:00	04/06/18 13:32		D3

QUALIFIERS

Project: 18-00383 MPCA FreewayLF Solids

Pace Project No.: 10424793

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

TNTC - Too Numerous To Count

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

LABORATORIES

PASI-M Pace Analytical Services - Minneapolis

BATCH QUALIFIERS

Batch: 435998

[M5] A matrix spike/matrix spike duplicate was not performed for this batch due to insufficient sample volume.

ANALYTE QUALIFIERS

1M RPD value is outside control limits due to sample non-homogeneity.

2M Sample was black in color. Sample needed to be centrifuged and decanted prior to analysis.

3M Sample was brown in color. Sample was centrifuged and decanted prior to analysis.

4M Sample was yellow in color.

5M The associated compound was outside of 20% for the associated continuing calibration but within 40% of the true value.

C0 Result confirmed by second analysis.

CH The continuing calibration for this compound is outside of Pace Analytical acceptance limits. The results may be biased high.

D3 Sample was diluted due to the presence of high levels of non-target analytes or other matrix interference.

D4 Sample was diluted due to the presence of high levels of target analytes.

E Analyte concentration exceeded the calibration range. The reported result is estimated.

L3 Analyte recovery in the laboratory control sample (LCS) exceeded QC limits. Analyte presence below reporting limits in associated samples.

M0 Matrix spike recovery and/or matrix spike duplicate recovery was outside laboratory control limits.

REPORT OF LABORATORY ANALYSIS

This report shall not be reproduced, except in full,
without the written consent of Pace Analytical Services, LLC.

QUALIFIERS

Project: 18-00383 MPCA FreewayLF Solids

Pace Project No.: 10424793

ANALYTE QUALIFIERS

- M1 Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.
- M6 Matrix spike and Matrix spike duplicate recovery not evaluated against control limits due to sample dilution.
- N2 The lab does not hold NELAC/TNI accreditation for this parameter.
- N3 Accreditation is not offered by the relevant laboratory accrediting body for this parameter.
- P3 Sample extract could not be concentrated to the routine final volume, resulting in elevated reporting limits.
- R1 RPD value was outside control limits.
- S4 Surrogate recovery not evaluated against control limits due to sample dilution.
- S5 Surrogate recovery outside control limits due to matrix interferences (not confirmed by re-analysis).
- T6 High boiling point hydrocarbons are present in the sample.
- T7 Low boiling point hydrocarbons are present in the sample.

Report of Laboratory Analysis

This report should not be reproduced, except in full, without the written consent of Pace Analytical Services, Inc.

The results relate only to the samples included in this report.

Report Prepared Date:

April 5, 2018

DISCUSSION

This report presents the results from the analysis performed on one sample submitted by a representative of Pace Analytical Services, Inc. The sample was analyzed for the presence or absence of 2,3,7,8-tetrachlorodibenzo-p-dioxin (2,3,7,8-TCDD) using a modified version of USEPA Method 8290. The reporting limits were set to correspond to the lowest calibration points and a nominal 10-gram sample amount, and the sensitivity was verified by signal-to-noise measurements. The quantitation limits, adjusted for sample extraction amount, may be somewhat higher or lower than the reporting limits provided in this report.

The isotopically-labeled TCDD internal standard in the sample extract was recovered at 66%. All of the labeled standard recoveries obtained for this project were within the 40-135% target range specified in Method 8290. Also, since the quantification of the native TCDD was based on isotope dilution, the data were automatically corrected for recovery and accurate values were obtained.

A laboratory method blank was prepared and analyzed with the sample batch as part of our routine quality control procedures. The results show that 2,3,7,8-TCDD was not detected, indicating that the sample processing steps were free of background levels of this congener.

A laboratory spike sample was also prepared using clean reference matrix that had been fortified with native standard material. The results show that the spiked native TCDD was recovered at 102%. This result was within the target range for the method. Matrix spikes were prepared with the sample batch using sample material from a separate project; results from these analyses will be provided upon request.

VOCs	EPA 8260
GRO	WI GRO
DRO	WI DRO

* Assumed that Dioxin analysis shall only be requested for approximately half of the samples. To be determined in the field by MPCA staff.

Reporting Flags

- A = Reporting Limit based on signal to noise
- B = Less than 10x higher than method blank level
- C = Result obtained from confirmation analysis
- D = Result obtained from analysis of diluted sample
- E = Exceeds calibration range
- I = Interference present
- J = Estimated value
- Nn = Value obtained from additional analysis
- P = PCDE Interference
- R = Recovery outside target range
- S = Peak saturated
- U = Analyte not detected
- V = Result verified by confirmation analysis
- X = %D Exceeds limits
- Y = Calculated using average of daily RFs
- * = See Discussion

REPORT OF LABORATORY ANALYSIS

This report shall not be reproduced, except in full,
 without the written consent of Pace Analytical Services, Inc.

April 13, 2018

Mr. Brad Jacobson
Pace Analytical Services, LLC..
1700 Elm Street
Suite 200
Minneapolis, MN 55414

RE: Project: 18-00383 MPCA Freeway LF Water
Pace Project No.: 10424924

Dear Mr. Jacobson:

Enclosed are the analytical results for sample(s) received by the laboratory on March 27, 2018. The results relate only to the samples included in this report. Results reported herein conform to the most current, applicable TNI/NELAC standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

Unionized Ammonia was not calculated for sample FD-SB-A3 due to insufficient volume to conduct the field pH & Temperature..

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Bob Michels
bob.michels@pacelabs.com

QUALIFIERS

Project: 18-00383 MPCA Freeway LF Water
Pace Project No.: 10424924

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.
ND - Not Detected at or above adjusted reporting limit.
TNTC - Too Numerous To Count
J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.
MDL - Adjusted Method Detection Limit.
PQL - Practical Quantitation Limit.
RL - Reporting Limit.
S - Surrogate
1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.
Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.
LCS(D) - Laboratory Control Sample (Duplicate)
MS(D) - Matrix Spike (Duplicate)
DUP - Sample Duplicate
RPD - Relative Percent Difference
NC - Not Calculable.
SG - Silica Gel - Clean-Up
U - Indicates the compound was analyzed for, but not detected.
N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.
Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.
TNI - The NELAC Institute.

LABORATORIES

PASI-GRMI Pace Analytical Services - Grand Rapids Michigan
PASI-M Pace Analytical Services - Minneapolis
PASI-V Pace Analytical Services - Virginia

BATCH QUALIFIERS

Batch: 529937
[M5] A matrix spike/matrix spike duplicate was not performed for this batch due to insufficient sample volume.
Batch: 529951
[M5] A matrix spike/matrix spike duplicate was not performed for this batch due to insufficient sample volume.
Batch: 530440
[M5] A matrix spike/matrix spike duplicate was not performed for this batch due to insufficient sample volume.

ANALYTE QUALIFIERS

1M The associated compound was outside of 20% for the associated continuing calibration but within 40% of the true value.
B3 The dissolved oxygen depletion of the dilution water blank exceeded 0.2 mg/L.
B6 The calculated seed correction exceeded the range of 0.6 to 1.0 mg/L.
D3 Sample was diluted due to the presence of high levels of non-target analytes or other matrix interference.
D6 The precision between the sample and sample duplicate exceeded laboratory control limits.
D8 The sample and duplicate results for this parameter are less than 5 times the reporting limit, the RPD may not be statistically valid.

REPORT OF LABORATORY ANALYSIS

This report shall not be reproduced, except in full,
without the written consent of Pace Analytical Services, LLC.

QUALIFIERS

Project: 18-00383 MPCA Freeway LF Water

Pace Project No.: 10424924

ANALYTE QUALIFIERS

- FS The sample was filtered in the laboratory prior to analysis.
- H3 Sample was received or analysis requested beyond the recognized method holding time.
- H6 Analysis initiated outside of the 15 minute EPA required holding time.
- M3 Matrix spike recovery was outside laboratory control limits due to matrix interferences.
- M6 Matrix spike and Matrix spike duplicate recovery not evaluated against control limits due to sample dilution.
- P6 Matrix spike recovery was outside laboratory control limits due to a parent sample concentration notably higher than the spike level.
- S4 Surrogate recovery not evaluated against control limits due to sample dilution.

REPORT OF LABORATORY ANALYSIS

This report shall not be reproduced, except in full,

LABORATORY ANALYTICAL PARAMETER LISTS
LIQUID SAMPLING
 Freeway Landfill and Dump Investigation
 Site Investigation Plan

Parameter List A	Methods
General Parameters	
Biochemical Oxygen Demand (5-day)	HACH 10360
Cyanide, Total	SM 4500CNE
Cyanide, Free	SM 4500C1G
Dissolved Oxygen	Field Parameter
Fluoride	EPA 300.0
Hardness, as CaCO ₃	SM 2340B
Nitrogen, ammonia, as N	EPA 350.1
Nitrogen: nitrate + nitrite, as N; nitrate, as N; nitrite, as N	EPA 353.2
Nitrogen, unionized ammonia, as N	EPA 350.1 Calc
Oil and Grease	EPA 1664
pH	SM 4500H+B
Phosphorus, total, as P	SM 4500PE
Secchi Disc (Surface Water Only)	Field Parameter
Solids, total suspended	SM 2540D
Turbidity	EPA 180.1
Metals Dissolved-Field Filtered (1)	
Aluminum, Barium, Copper, Manganese, Nickel, Silver, Tin, Zinc	EPA 200.7
Antimony, Arsenic, Beryllium, Boron, Cadmium, Chromium, Cobalt, Lead, Selenium, Thallium, Uranium, Vanadium	EPA 200.8
Chromium, trivalent <i>(unfiltered)</i>	calculated
Chromium, hexavalent	SM3500CRB
Mercury Dissolved-Field Filtered (1)	EPA 245.1
Dioxins / Furans EPA 1613B	
Herbicides / Pesticides	
Organochlorine Pesticides	EPA 8081
SVOCs EPA 8270C	
PCBs EPA 8082	
PFCs EPA 537	
VOCs EPA 8260 LL/SIM	
1,4-Dioxane	EPA 8270 SIM

- Analysis by MDH Laboratory

**** ADD to Parameter List A:**

Total Metals: Chromium (for Cr III determination) Ca and Mg (for Total Harness detrmination)

Parameter List B	Methods
General Parameters	
Bromate, Chlorite	EPA 300.1
Chlorine dioxide	SM4500CIO2
Chlorine, total residual	Field Parameter
Herbicides / Pesticides	
Herbicides, 10 Compounds	EPA 8151 MDA List II
Pesticides, 17 Compounds	MDA List 1 (8270 Pest)
Diquat	EPA 549.2
VOCs	
DBCP & EDB	EPA 8011
1,4-Dioxane	EPA 8270-SIM
Acrylamide	EPA 8316 PDFW
Ethylene glycol, Methyl alcohol	EPA 8015 PII
Formaldehyde	EPA 8315 PGRM
Trihalomethanes, total (TTHMMss)	EPA 524.2
Radiochemical	
Gross Alpha (radiation), Gross Beta (radiation)	EPA 900.0
Glyphosate	EPA 547
Haloacetic Acids EPA 552.2	

Parameter List C	Methods
General Parameters	
Chloride	EPA 300.00
Herbicides / Pesticides	
Aldicarb, Carbofuran	EPA 8318
Endothall	EPA 548.1
Radiochemical	
Radium 226	EPA 903.1
Radium 228	EPA 904.0
Radium, total	EPA 903.0

Dissolved -Field Filtered(1) Confirmed dissolved metals are requested, not totals, per 3/19/18 email from Mark Umholtz (MPCA).

Report of Laboratory Analysis

This report should not be reproduced, except in full, without the written consent of Pace Analytical Services, Inc.

The results relate only to the samples included in this report.

Report Prepared Date:

April 5, 2018

DISCUSSION

This report presents the results from the analyses performed on three samples submitted by a representative of Pace Analytical Services, Inc. The samples were analyzed for the presence or absence of 2,3,7,8-tetrachlorodibenzo-p-dioxin (2,3,7,8-TCDD) using a modified version of USEPA Method 8290. The reporting limits were set to correspond to the lowest calibration points and a nominal 10-gram sample amount, and the sensitivity was verified by signal-to-noise measurements. The quantitation limits, adjusted for sample extraction amount, may be somewhat higher or lower than the reporting limits provided in this report.

The recoveries of the isotopically-labeled TCDD internal standard in the sample extracts ranged from 45-68%. All of the labeled standard recoveries obtained for this project were within the 40-135% target range specified in Method 8290. Also, since the quantification of the native TCDD was based on isotope dilution, the data were automatically corrected for recovery and accurate values were obtained.

A laboratory method blank was prepared and analyzed with the sample batch as part of our routine quality control procedures. The results show that 2,3,7,8-TCDD was not detected, indicating that the sample processing steps were free of background levels of this congener.

A laboratory spike sample was also prepared using clean reference matrix that had been fortified with native standard material. The results show that the spiked native TCDD was recovered at 91%. This result was within the target range for the method. Matrix spikes were prepared with the sample batch using sample material from a separate project; results from these analyses will be provided upon request.

Note: Whenever there is a discrepancy affecting North Carolina compliance samples, a copy of this form will be sent to the North Carolina DEHNR Certification Office (i.e. out of hold, incorrect preservative, out of temp, incorrect containers).

Reporting Flags

- A = Reporting Limit based on signal to noise
- B = Less than 10x higher than method blank level
- C = Result obtained from confirmation analysis
- D = Result obtained from analysis of diluted sample
- E = Exceeds calibration range
- I = Interference present
- J = Estimated value
- Nn = Value obtained from additional analysis
- P = PCDE Interference
- R = Recovery outside target range
- S = Peak saturated
- U = Analyte not detected
- V = Result verified by confirmation analysis
- X = %D Exceeds limits
- Y = Calculated using average of daily RFs
- * = See Discussion

June 20, 2018

Mr. Brad Jacobson
Pace Analytical Services, LLC..
1700 Elm Street
Suite 200
Minneapolis, MN 55414

RE: Project: 18-00383 MPCA Freeway LF Soil-Revised Report
Pace Project No.: 10424937

Dear Mr. Jacobson:

Enclosed are the analytical results for sample(s) received by the laboratory on March 27, 2018. The results relate only to the samples included in this report. Results reported herein conform to the most current, applicable TNI/NELAC standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

This project was revised on June 20, 2018 to add manganese results for all samples.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Ryan Thibault for
Bob Michels

REPORT OF LABORATORY ANALYSIS

This report shall not be reproduced, except in full,
without the written consent of Pace Analytical Services, LLC.

ANALYTICAL RESULTS

Project: 18-00383 MPCA Freeway LF Soil-Revised Report

Pace Project No.: 10424937

Sample: FD-SB-G4 (15.5-17.5) **Lab ID: 10424937001** Collected: 03/26/18 11:30 Received: 03/27/18 08:15 Matrix: Solid

Results reported on a "dry weight" basis and are adjusted for percent moisture, sample size and any dilutions.

ANALYTICAL RESULTS

Project: 18-00383 MPCA Freeway LF Soil-Revised Report

Pace Project No.: 10424937

Sample: FD-SB-G4 (15.5-17.5) **Lab ID: 10424937001** Collected: 03/26/18 11:30 Received: 03/27/18 08:15 Matrix: Solid

Results reported on a "dry weight" basis and are adjusted for percent moisture, sample size and any dilutions.

Parameters	Results	Units	Report Limit	DF	Prepared	Analyzed	CAS No.	Qual
9012 Cyanide, Total Analytical Method: EPA 9012 Preparation Method: EPA 9012A								
Cyanide	0.90	mg/kg	0.49	1	03/29/18 10:55	03/29/18 13:16	57-12-5

REPORT OF LABORATORY ANALYSIS

This report shall not be reproduced, except in full,
without the written consent of Pace Analytical Services, LLC.

ANALYTICAL RESULTS

Project: 18-00383 MPCA Freeway LF Soil-Revised Report

Pace Project No.: 10424937

Sample: **FD-SB-D3 (4-16wm)** Lab ID: **10424937002** Collected: 03/26/18 14:00 Received: 03/27/18 08:15 Matrix: Solid

Results reported on a "dry weight" basis and are adjusted for percent moisture, sample size and any dilutions.

ANALYTICAL RESULTS

Project: 18-00383 MPCA Freeway LF Soil-Revised Report

Pace Project No.: 10424937

Sample: **FD-SB-E3 (11-15.5)** Lab ID: **10424937003** Collected: 03/26/18 14:40 Received: 03/27/18 08:15 Matrix: Solid

Results reported on a "dry weight" basis and are adjusted for percent moisture, sample size and any dilutions.

ANALYTICAL RESULTS

Project: 18-00383 MPCA Freeway LF Soil-Revised Report

Pace Project No.: 10424937

Sample: **FD-SB-F3 (3-11wm)** Lab ID: **10424937004** Collected: 03/26/18 15:30 Received: 03/27/18 08:15 Matrix: Solid

Results reported on a "dry weight" basis and are adjusted for percent moisture, sample size and any dilutions.

ANALYTICAL RESULTS

Project: 18-00383 MPCA Freeway LF Soil-Revised Report

Pace Project No.: 10424937

Sample: **FD-SB-F3 (3-11wm)** Lab ID: **10424937004** Collected: 03/26/18 15:30 Received: 03/27/18 08:15 Matrix: Solid

Results reported on a "dry weight" basis and are adjusted for percent moisture, sample size and any dilutions.

ANALYTICAL RESULTS

Project: 18-00383 MPCA Freeway LF Soil-Revised Report

Pace Project No.: 10424937

Sample: FD-SB-G3 (7-16wm) Lab ID: 10424937005 Collected: 03/26/18 16:35 Received: 03/27/18 08:15 Matrix: Solid

Results reported on a "dry weight" basis and are adjusted for percent moisture, sample size and any dilutions.

Parameters	Results	Units	Report Limit	DF	Prepared	Analyzed	CAS No.	Qual

ANALYTICAL RESULTS

Project: 18-00383 MPCA Freeway LF Soil-Revised Report

Pace Project No.: 10424937

Sample: **FD-SB-G2 (10-12wm)** Lab ID: **10424937006** Collected: 03/26/18 17:20 Received: 03/27/18 08:15 Matrix: Solid

Results reported on a "dry weight" basis and are adjusted for percent moisture, sample size and any dilutions.

ANALYTICAL RESULTS

Project: 18-00383 MPCA Freeway LF Soil-Revised Report

Pace Project No.: 10424937

Sample: FD-SB-G2 (10-12wm) **Lab ID: 10424937006** Collected: 03/26/18 17:20 Received: 03/27/18 08:15 Matrix: Solid

Results reported on a "dry weight" basis and are adjusted for percent moisture, sample size and any dilutions.

Parameters	Results	Units	Report Limit	DF	Prepared	Analyzed	CAS No.	Qual
